...odd years since
...n *half-a-million*
...ex-service men,

women and dependants in distressed circumstances! Even the Korean War, Suez, Cyprus and Malaya have their tragic aftermath. Any man or woman who has served can turn to the British Legion Haig's Fund which, in fact, is daily helping new cases. Bridging the gap between State welfare and the very real needs of so many is its constant task. For some time the Legion has been unable to meet its annual commitments from Poppy Day collections. Conditions are such that if we are to maintain our work additional funds are urgently needed. Legacies, bequests, donations, deeds of covenant—these are the means by which this pressing problem can be solved.

*For comprehensive information about the Legion's work—
bequest and deed of covenant forms—please write to*

TAKE UP PELMANISM

For Progress and Prosperity

PELMANISM is a working course in Practical Psychology directed to the needs of the average man and woman.

The Pelman Course is based on over 65 years' intensive study concurrent with experience in dealing with the difficulties, failings, fears, aspirations, and ambitions of more than a million men and women of all ages and occupations in all parts of the world.

You would like your affairs to prosper and your income to increase. Pelmanism will help you to achieve this and will enable you to develop that zest for living which comes with an awakened mind; also with quickened mental powers your awakened ability will enable you to enjoy those purchasable pleasures that come with extra money.

The Pelman training is scientific, precise, and individual, and is a sure way to success.

Pelmanism will rapidly and permanently banish defects and weaknesses. It will keep your mind vigilant and self-reliant and develop valuable positive qualities.

Pelmanism is a true philosophy of living for ordinary sensible people who wish to make the best of themselves at all times and under all circumstances.

Easy to Follow

Half an hour a day of spare time for a few weeks is enough. Everything is simply set out and described and no drudgery is entailed. The books are printed in a handy pocket size, so that you can study them in spare moments during the day. Even the busiest man or woman can spare a few minutes daily for Pelmanism, especially when minutes so spent bring in such rich rewards.

HOW TO LEARN LANGUAGES

The Pelman Languages Institute teaches French, German, Spanish, and Italian without translation. Write for particulars of the language that interests you, which will be sent gratis and post free.

Pelman Languages Institute
200 Norfolk Mansions, Wigmore Street
London, W.1

What Pelmanism Does

Pelmanism enables you to overcome defects and failings. Amongst those most often met with are the following:

Inertia	Pessimism
Timidity	Forgetfulness
Indecision	Indefiniteness
Depression	Procrastination
Weakness of Will	Mind-Wandering

But Pelmanism does more than eliminate failings. It awakens dormant faculties. It develops power you never thought you possessed. It strengthens mental attributes which are valuable in every career and every aspect of living. It develops:—

—Optimism	—Courage
—Judgment	—Initiative
—Self-Control	—Reliability
—Concentration	—Will-Power
—Self-Confidence	—Resourcefulness
—Reliable Memory	—Presence of Mind

Pelmanists are not left to make the applications themselves. An experienced and sympathetic instructional staff shows them, in exact detail, how to apply the principles of Pelmanism to their own circumstances and aspirations. Thus every Pelman Course is an individual Course.

Remember—Everything you do is preceded by your attitude of mind

The general effect of the training is to induce an attitude of mind and a personal efficiency favourable to the happy management of life.

Send for the Free Book

The Pelman Course is simple and interesting and takes up very little time. You can enrol on the most convenient terms: The Course is fully described in *The Science of Success*, which will be sent you, gratis and post free, on application to:—

PRINTED IN GREAT BRITAIN

Ret. AY754 .W5 1963
Note—"WHITAKER" for 1963 is published in three editions:—

Library Edition, Leather Binding with 16 Coloured Maps,
1,204 pages—42s. net

Complete Edition, Red and Green Cloth Cover,
1,204 pages—25s. net

Shorter Edition, Orange Paper Cover, 692 pages—12s. 6d. net

PREFACE TO THE 95TH ANNUAL VOLUME

(1963)

The 95th annual volume of "WHITAKER" is the largest edition ever printed. The increase in size, the first for some years, brings the total number of pages to 1,204. It is worth recording that the first volume, of 1869, contained 367 pages.

The extra pages have been largely used to restore to the Almanack a number of useful features and tables, which, owing to the ever-increasing demands on space, it has not always been found possible to include in recent editions. Information about professional fees has been expanded, and among the tables which have been reinstated are those dealing with road and railway accidents, industrial stoppages, wages and PAYE.

As usual, several new features of topical interest and value have been added to the Almanack. The continually growing importance of British transport problems has led to the introduction of a new section on transport in the record of Events of the Year. The table in the 1962 "Whitaker," illustrating the increase in main line railway fares, attracted considerable interest and this year the details have been extended to deal with suburban and London Underground services.

Other fresh statistical information covers Government capital expenditure, agricultural subsidies, betting and gaming and the Metropolitan Water Board. Incorporated in the statistical section is a new article on the Post Office, covering its past history, its present financial results and its plans for development in the future.

Once more the year under review has been marked by far-reaching scientific developments, and the latest achievements in space travel, as well as the advent of Telstar, have been fully chronicled and are also the subject of illustrations.

The increasing interest in the National Parks and their growing importance has prompted a special article, and, in a kindred sphere, it has been possible to replace in the Almanack the section on Nature Reserves, which have greatly increased in number in recent years.

For the first time a list of Agricultural Marketing Boards with notes on their structure and functions has been supplied and the principal reporting and news agencies in Great Britain have been added to the Press section.

The progress of the Common Market during the year has been described and the latest information about it provided. The creation of new states in Africa and elsewhere continues; Tanganyika takes its place in the Almanack as an independent country within the Commonwealth for the first time, and articles on the new nations of Algeria, Ruanda and Burundi have been added to the foreign countries section.

The Editor would once more express his thanks to all those who have corresponded with him during the year and who, by their suggestions, have again contributed materially to the value of the Almanack.

**REMEMBER
ST.
DUNSTAN'S**

WAR-BLINDED Service men and women have become skilled in a craft or profession thanks to the untiring efforts of St. Dunstan's. More important still, they have learnt the feeling of independence.

But St. Dunstan's itself relies on voluntary support.

Will you please remember St. Dunstan's in your will? And if you are in a position of trust, think of St. Dunstan's when discussing legacies?

MORDEN COLLEGE

Blackheath, S.E.3

Founded in 1695 by Sir John Morden.

Accommodation with allowances or external pensions for poor men of good character, widowers or unmarried, at least sixty years of age, who have been merchants and have lost their estates by accident or misfortune in their honest endeavours to get their living by way of trading. In default of applicants possessing these qualifications, applications may be considered from poor men who have attained rank or position of substantial authority in their employment, business or profession and who are prevented from continuing in their employment, business or profession by illness, accident or misfortune. Accommodation and external pensions are provided for married couples, also for widows and unmarried daughters of poor men who at the date of death possessed the qualifications mentioned. All elections are at the absolute discretion of the Trustees.

Clerk to the Trustees: Montagne S. Graham

Thames Nautical Training College H.M.S. Worcester

Established 1862.

Incorporated 1893

For the training of youths to become Executive Officers in the Merchant Navy. Shipping Companies give preference to "Worcester" trained Cadets. Cadets on entry are enrolled "Cadets R.N.R." and granted the privilege of wearing the uniform of that rank. Qualified Cadets on leaving are granted 1 year's remission of Sea Service.

Ages of Admission—13½-15 inclusive. Fees—£345 per annum, which include Uniform. Extras reduced to a minimum. Bursaries in reduction of fees available. *For Illustrated Prospectus, apply—*

British Banking in Asia

These are the territories served by THE CHARTERED BANK and its subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. These branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. In London an effective credit information service and skilled assistance and advice are available to merchants and manufacturers seeking new business connexions in Asian markets.

THE CHARTERED BANK

(Incorporated by Royal Charter 1853)

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

West End, London branch: 2 Regent Street, London, S.W.1

Branches in the United Kingdom also at Manchester and Liverpool, in Germany at Hamburg and in the United States at New York.

THE EASTERN BANK LIMITED

HEAD OFFICE: 2 AND 3 CROSBY SQUARE, LONDON, E.C.3

Associated Banks

Allahabad Bank Ltd. (Incorporated in India) • The Irano British Bank (Incorporated in Iran)

Panthera Tigris (the Tiger)

represents India
in our gallery of wild life

But it is not only for their fauna that our parts of the world are remarkable. Their contribution to the trade of the world increases yearly—and our own capacity to serve them increases too.

In the last ten years, the resources of National and Grindlays Bank Limited, which incorporate the Eastern Branches of Lloyds Bank Limited, have risen from £150 million to £250 million. The number of branches operating in countries overseas has increased from 50 to 150. Unrivalled banking facilities are therefore available for all who trade or travel in the countries served by the Bank.

**NATIONAL AND GRINDLAYS
BANK LIMITED**

HEAD OFFICE:
26 BISHOPSGATE,
LONDON, E.C.2

Amalgamating **NATIONAL BANK OF INDIA LIMITED · GRINDLAYS BANK LIMITED
AND THE EASTERN BRANCHES OF LLOYDS BANK LIMITED**

A comprehensive banking service is available in:

**INDIA · PAKISTAN · CEYLON · BURMA · ADEN · SOMALIA · EAST AFRICA AND
THE RHODESIAS** Bankers to the Government in: **ADEN · KENYA · UGANDA · ZANZIBAR**

OCCURRENCES DURING PRINTING

The Royal Family

Oct. 9.—The Duke of Kent, who was accompanied by the Duchess, represented the Queen at the celebration of independence in Uganda.

Oct. 15.—At Holyroodhouse, the Queen invested the Earl of Home as a Knight of the Order of the Thistle.

Oct. 16.—The King of Norway began State visit to Scotland.

Politics and Official

Oct. 1.—Labour Party conference opened at Brighton and carried unanimously resolution attacking Government's transport policy.

Mr. Geoffrey Lawrence, Q.C., was appointed Chairman of National Incomes Commission.

Oct. 3.—Mr. D. H. Davies was elected Chairman of Labour Party for ensuing year, and Mr. Gaitskill vice-chairman.

Oct. 5.—Labour Party conference passed resolution opposing nuclear weapon testing by any country.

Oct. 8.—B.O.A.C. reported loss on previous year of over £14,000,000, largest annual deficit hitherto incurred.

Oct. 10.—Conservative Party conference carried motion supporting Government policy on Common Market by large majority.

Oct. 12.—It was announced that Mr. Selwyn Lloyd was to carry out survey of Conservative Party organization.

Mr. I. H. Shearer, Q.C., was appointed Lord Advocate.

Labour

Oct. 3.—Strike of N.U.R. members took place throughout country.

Overseas

Oct. 1.—After night of rioting at University of Mississippi, in which 2 persons were killed, Federal marshals, troops and military police restored order. Nearly 200 people were arrested. James Meredith, the Negro applicant, was duly enrolled in the University.

Oct. 3.—Commander Walter Schirra, U.S.N., was sent into orbit from Cape Canaveral and successfully recovered from Pacific Ocean 9 hours later after making 6 circuits of earth.

Oct. 4.—President de Gaulle, in television broadcast to nation, said that he might resign if referendum on Presidency was not approved. Later M. Pompidou's Ministry was defeated in vote of censure against pending referendum.

Foreign Office spokesman said that Britain would not join U.S.A. in shipping boycott of Cuba.

Oct. 6.—President de Gaulle dissolved French Assembly, asking M. Pompidou to continue in office until new elections.

Oct. 10.—Indian troops were reported to have attacked Chinese frontier guards in southern Tibet, causing casualties.

Oct. 11.—Ecumenical Council opened in St. Peter's, Rome.

Revolutionary Government in Yemen said that it regarded Yemen as in state of war with Saudi Arabia.

Obituary

Oct. 1.—Gen. Sir Cecil Romer, G.C.B., K.B.E., C.M.G., former Adjutant-General, aged 92.

Oct. 3.—Lt.-Col. F. D. Prentice, secretary of Rugby Football Union since 1947, aged 64.

Oct. 4.—E. ("Patsy") Hendren, great Middlesex and England batsman, aged 73.

Oct. 5.—Lord Normand, P.C., (life peer), former Lord President of Court of Session and Lord of Appeal in Ordinary, aged 78.

Oct. 13.—Rt. Hon. William Glenvil Hall, Labour M.P. for Colne Valley and former junior Minister, aged 75 (by-election pending).

WORLD SPEED RECORDS

Air.—Lt.-Col. Robert R. Robinson (U.S. Marine Corps) achieved a maximum speed of 1,606 m.p.h. (2,585 kilometres per hour) on Nov. 22, 1961. *Women*.—Mme. Jacqueline Auriol achieved an average speed of 1,148.89 m.p.h. on a closed circuit on June 22, 1962.

Land.—The late John R. Cobb, in a *Railton Mobil* achieved a speed of 394.196 m.p.h., taking 9.1325 secs. for 2 runs over a measured mile from a flying start at Bonneville Flats, Utah, on Sept. 16, 1947.

Water.—Donald Campbell averaged 260.35 m.p.h. in 2 consecutive runs over a measured kilometre (621 miles) on Lake Coniston on May 14, 1959. Previous record, 248.62 m.p.h., Nov. 10, 1958.

See also p. 570.

DIVORCE STATISTICS

England and Wales.—In the year 1960, 27,870 petitions for divorce were filed, 12,109 by husbands and 15,761 by wives. Principal grounds for these actions were adultery (12,896), desertion (9,074) and cruelty (5,622). 23,369 decrees of divorce were made absolute in 1960 and 499 decrees of nullity. There were 118 judicial separations during the year.

Scotland and Northern Ireland.—In the year 1960, 1,856 actions for divorce were completed in Scotland, 786 by husbands and 1,070 by wives. Grounds in the majority of cases were adultery (793) and desertion (675). 1,804 divorces were granted and six separation orders. 152 divorces were granted in Northern Ireland in 1960, 4 decrees of nullity of marriage and one judicial separation.

COMPANIES

(Registered by the Board of Trade Registrar of Companies, Companies House, 55-71 City Road, E.C.1. The *Registry of Business Names* is also located at Companies House.)

In 1935 there were 14,826 public and 124,143 private Companies on the Register with paid-up capital of £3,963,000,000 and £1,730,000,000 respectively.

During 1961, 33,303 new Companies having a share capital were registered in Great Britain (England and Wales, 32,159; Scotland, 1,144), with nominal capital of £154,349,000. On December 31, 1961, there were 416,894 Companies on the register. Companies having a share capital were 10,662 Public Companies with total paid-up Capital, £4,879,000,000, and 386,534 Private Companies, with total paid-up capital, £2,733,000,000.

ASTRONOMICAL NOTES

MERCURY (magnitude -0.5 to +0.4) is an evening star for the first ten days of the month, greatest eastern elongation occurring on the 4th. It is visible low in the south-western sky at the end of civil twilight. For the remainder of the month it is unsuitably placed for observation.

VENUS is a brilliant morning star (magnitude -4.2), attaining greatest western elongation on the 23rd. It may be seen in the south-eastern sky several hours before sunrise, passing 9° N. of Antares on the 15th. The old Moon will be seen near to Venus on the mornings of the 21st and 22nd.

MARS is a conspicuous morning star, its magnitude increasing from -0.4 to -1.0 during the month. It starts the month about 5° N.W. of

Regulus in Leo and its retrograde motion takes it to the borders of Cancer by the end of January.

JUPITER is an evening star, magnitude -1.7, in Capricornus. The thin crescent Moon is near on the evenings of the 27th and 28th.

SATURN is an evening star, magnitude +0.9, visible for a short while near the end of nautical twilight, low in the south-western sky. It becomes unobservable later in the month.

During the first ten days of the month three planets are visible in the same part of the sky—Mercury, Saturn and Jupiter, with Mercury nearest to the Sun and Saturn in the middle. Jupiter is the brightest and Saturn the faintest.

ECLIPSE. An annular eclipse of the Sun occurs on the 25th but it is not visible from the British Isles.

ASTRONOMICAL NOTES

MERCURY, although it attains its greatest western elongation of 26° on the 13th, is not really suitably placed for observation, being about 20° S. of the equator. However, observers with a good clear south-east horizon might locate it (magnitude +0.2) in binoculars at 07^h for a few days around the middle of the month; it is only a few degrees above the horizon.

VENUS is a brilliant morning star, magnitude -3.8, and visible in the S.E. sky before dawn. It never achieves any high altitude before sunrise, however, due to its southern declination of 20°. The Moon is near on the mornings of the 20th and 21st.

MARS is a conspicuous object visible all night, in the constellation of Cancer. After opposition,

on the 4th, its magnitude decreases from -1.0 to -0.5.

JUPITER is an evening star, magnitude -1.6, and visible low in the W.S.W. sky for a short while after sunset. It is lost in the evening twilight by the end of the month.

SATURN is unsuitably placed for observation, conjunction occurring on the 3rd.

URANUS is at opposition on the 22nd, just over half way from Regulus towards ρ Leonis. It is barely visible to the naked eye but telescopically shows a slightly greenish disk 4" in diameter. It is easily located with small optical aid.

ZODIACAL LIGHT. The evening cone may be seen under suitable conditions, stretching up from the western horizon near the end of astronomical twilight between the 10th and 25th.

PHENOMENA

March 2^d 04^h Pluto at opposition.

6^d 22^h Mars in conjunction with the Moon. Mars 3° N.

16^d 22^h Jupiter in conjunction with the Sun.

20^d 23^h Venus in conjunction with Saturn.

Venus 0° 9' N.

21^d 08^h Vernal equinox.

22^d 10^h Saturn in conjunction with the Moon.

Saturn 1° N.

22^d 13^h Venus in conjunction with the Moon.

Venus 2° N.

30^d 22^h Mercury in superior conjunction with the Sun.

MONTHLY NOTES

March 1. Auditors of Boroughs, Eng. and W., to be elected.

8. Last day for sending list of persons employed in factories.

17. Bank Holiday in Northern Ireland.

25. Lady Day. Quarter Day. Accounts of Local Government Authorities, Eng. and W., to be made up to 31st. Quarter Sessions to be held 21 days before or after this date.

31. Financial Year 1962-63 ends.

** Centenary.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation, superior conjunction occurring on the 30th.

VENUS is a brilliant morning star, magnitude -3.6, and visible above the S.E. horizon before sunrise. Although its elongation from the Sun shortens by only 6° during the month the time available for observation falls noticeably due to the rapid northward motion of the Sun and consequent earlier sunrise times. Venus is overtaken by the Moon on the 22nd.

MARS is a conspicuous evening star, magnitude -0.5 to +0.2, moving very slowly in Cancer.

After reaching a stationary point on the 17th it resumes its direct motion. The gibbous Moon passes 3° S. of Mars on the evening of the 6th.

JUPITER is unsuitably placed for observation, conjunction occurring on the 16th.

SATURN is unsuitably placed for observation.

ZODIACAL LIGHT. The evening cone may be seen under suitable conditions stretching up from the western horizon near the end of astronomical twilight, between the 12th and the 26th. The zodiacal light is of the same order of brightness as the Milky Way so that clear skies and an absence of artificial lights, and also the Moon, are necessary for its successful observation.

Mean Longitude of Ascending Node on April 1, 116°.

According to the Summer Time Act, 1925, *Summer Time* 1963 should begin at 2 A.M., G.M.T. on April 21 and should end on October 6 at 2 A.M., G.M.T., but other dates may be fixed by Order in Council (see pp. 142, 168).

MONTHLY NOTES

- April 1. Refreshment House Licences to be renewed.
- Income Tax Year (1962-63) ends.
 - Lady Day Fire Insurances must be paid.
 - First day of Jewish Passover.
 - Bank and General Holiday, England, Wales and N. Ireland.

** Centenary.

ASTRONOMICAL NOTES

MERCURY is visible as an evening star (magnitude -1.2 to +1.0), except during the first ten days of the month. It may be located above the W.N.W. horizon at the end of civil twilight. Greatest eastern elongation occurs on the 26th and this is the most favourable evening apparition of the year for observers in the northern hemisphere. At the end of the month the planet is just south of the Pleiades.

VENUS is still a morning star, magnitude -3.4, but only visible for a short while before sunrise,

low above the E.S.E. horizon. The morning of the 21st sees the Moon approaching Venus, passing it after sunrise.

MARS is an evening star, its magnitude fading during the month from +0.2 to +0.8. It is moving slowly eastwards in Cancer. The gibbous Moon approaches Mars on the night of the 2nd-3rd passing 2° S. of the planet around the time of moonset. The Moon again approaches Mars on the evening of the 30th.

JUPITER is unsuitably placed for observation.

SATURN is unsuitably placed for observation.

ASTRONOMICAL NOTES

MERCURY is visible as an evening star (magnitude +1.0 to +1.5) during the first few days of the month, above the W.N.W. horizon, after sunset. Thereafter it is invisible, inferior conjunction occurring on the 18th.

VENUS is getting more difficult to observe in the long twilight before dawn and may only be glimpsed under exceptionally good conditions for a very short time extremely low on the eastern horizon. Its magnitude is -3.3.

MARS is an evening star, magnitude +0.8 to +1.2, and no longer so conspicuous as it was at the beginning of the year. Mars passes from Cancer into Leo and by the end of the month is

only 1° N. of Regulus. The Moon approaches Mars on the evening of the 28th.

JUPITER becomes visible as a morning star during the second half of the month, when it may be detected low above the E. horizon just before the beginning of civil twilight. Its magnitude is -1.7.

SATURN gradually becomes a morning star, magnitude +1.0, during the month. It is visible low above the E.S.E. horizon during morning nautical twilight. On the morning of the 16th the Moon will be seen approaching Saturn.

NEPTUNE is at opposition on the 5th, only 1½° N. of α Librae. Its magnitude is +8 and it shows a slightly greenish disk of 2½" diameter in a telescope.

See note on *Summer Time*, page 102.

MONTHLY NOTES

- June 3. Bank and General Holiday, England, Wales and N. Ireland.
- 5. Constitution Day, Denmark.
- 22. Longest day.
- 24. Midsummer Day. Quarter Day. Sheriffs of London to be elected by the Liverymen.
- County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following June 24.
- ** Centenary.

ASTRONOMICAL NOTES

MERCURY is at greatest western elongation (23°) on the 13th but the long duration of twilight makes observation impossible. However telescope observers might locate it on the morning of the 28th as it is then passing 0°.6 S. of Venus.

VENUS, magnitude -3.3, remains a difficult morning star, visible only for a short while before dawn, extremely low above the E.N.E. horizon.

MARS is an evening star, magnitude +1.3, in Leo. At the very beginning of the month it is only 1° N. of Regulus. On the evening of the

5th Mars is a useful guide to the position of Uranus, passing only 0°.6 N. of this planet. The Moon passes 3° N. of Mars on the evening of the 26th.

JUPITER is a morning star, magnitude -1.8, and may be seen low above the E. horizon, before the beginning of civil twilight. The Moon passes 4° S. of Jupiter on the morning of the 16th. The eclipses and shadow transits of its satellites are given on p. 150 for the convenience of observers with telescopes.

SATURN is a morning star, magnitude +0.9, in the constellation of Capricornus. The Moon is near on the mornings of the 12th and 13th.

ASTRONOMICAL NOTES

MERCURY is at superior conjunction on the 13th and is thus unsuitably placed for observation.

VENUS, magnitude -3.4, is still a very difficult morning star, visible only for a short while before dawn low above the E.N.E. horizon. By the end of the month the planet is only 10° from the Sun and is no longer observable.

MARS is an evening star in the W.S.W. sky, magnitude +1.6, and fading as it moves into the long evening twilight. It is crossing the equator going southwards and is no longer suitably placed for observation by the end of the month.

JUPITER is a conspicuous morning star, magnitude -2.1, and by the end of the month is visible

above the E. horizon before midnight. Jupiter is in the constellation of Pisces. The Moon is close to Jupiter on the 13th and 14th.

SATURN is a morning star, magnitude +0.6, now rising before midnight. The rings are not so wide open as they were a few years ago and now the width in the N.-S. direction is considerably less than that of the planet itself.

ECLIPSE. A partial eclipse of the Moon is visible on the 6th from the British Isles. See p. 146 for details.

ECLIPSE. A total eclipse of the Sun occurs on the 20th but it is not visible from the British Isles, except that a small partial phase is visible from Scotland and Ireland. See p. 146 for details.

ASTRONOMICAL NOTES

MERCURY is at greatest eastern elongation (27°) on the 24th but even then it is only 5° above the western horizon at sunset so that it is not suitably placed for observation.

VENUS is not suitably placed for observation, being at superior conjunction on the 30th.

MARS is unsuitably placed for observation and will, in fact, remain so for the remainder of the year.

JUPITER is a conspicuous morning star, magnitude -2.3, in the constellation of Pisces. The four

Galilean satellites are readily observable with almost any small telescope. During the early hours of the 10th the Moon passes 4° S. of Jupiter, which is then at a stationary point.

SATURN is at opposition on the 13th and thus visible nearly all night. Its magnitude is +0.5 and it is still in the constellation of Capricornus. On the late evening of the 5th the Full Moon passes only 1° S. of Saturn.

METEORS. The famous Perseid meteor shower may be seen on the 12th though moonlight will cut down the number of meteors visible.

Mean Longitude of Ascending Node on September 1, 108°.

See note on *Summer Time*, page 126.

MONTHLY NOTES

- September 2. Partridge shooting begins. Salmon close-time begins.
3. Harvest Moon.
8. Malta's National Day (1565).
19. Jewish New Year (A.M. 5724).
28. Yom Kippur (Jewish Day of Atonement).
- , Sheriffs of London to be sworn in.
29. Michaelmas. Quarter day. Lord Mayor of London elected.
- , County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following Sept. 29.
- ** Centenary.

ASTRONOMICAL NOTES

MERCURY is at inferior conjunction on the 20th and is unsuitably placed for observation except during the last few days of the month when it may be seen as a morning star, magnitude +1, low on the E.S.E. horizon at the beginning of civil twilight.

VENUS is not suitably placed for observation.

MARS is not suitably placed for observation.

JUPITER is a conspicuous evening star, magnitude -2.4, and is visible all night in the constellation

of Pisces. The Moon passes 4° S. of Jupiter on the morning of the 6th.

SATURN is an evening star, magnitude +0.6, in the constellation of Capricornus. The Moon approaches Saturn on the morning of the 2nd and again on the 29th. Saturn will be seen only 0°.1 N. of Capricorn on the 21st.

ZODIACAL LIGHT. The morning cone is visible under good conditions (a clear sky and no street lights), stretching up from the eastern horizon near the beginning of astronomical twilight, from the 16th to the end of the month.

ASTRONOMICAL NOTES

MERCURY is a morning star (magnitude +0.5 to -1.0) except during the last ten days of the month. It may be located above the eastern horizon at the beginning of civil twilight. Greatest western elongation occurs on the 5th and this is the most favourable morning apparition of the year for observers in the northern hemisphere. On the morning of the 16th the Moon (only 32 hours before New) passes 3° N. of Mercury.

VENUS is unsuitably placed for observation.

MARS is unsuitably placed for observation.

JUPITER is a conspicuous object, magnitude -2.5, in Pisces. Opposition occurs on the 8th and the planet is thus observable throughout the hours of darkness. The Moon passes Jupiter on the 3rd and again on the 30th.

SATURN is an evening star, magnitude +0.8, but is now no longer observable after midnight. On the evening of the 26th the Moon passes 2° S. of the planet. Saturn's largest satellite, Titan, has a magnitude of 8½ and can therefore be detected in quite small telescopes.

ASTRONOMICAL NOTES

MERCURY is at superior conjunction on the 5th and thus unsuitably placed for observation.

VENUS is not observable at first but becomes a difficult evening star, magnitude -3.3, towards the end of the month, when it may be seen very low above the S.W. horizon shortly after sunset. Telescopically Venus may be seen very close to Mars on the 20th, passing 0°.05 S. of the latter several hours after setting.

MARS is unsuitably placed for observation.

JUPITER is a conspicuous evening star, magnitude -2.4. It is an outstanding feature of the southern skies during the evening and in fact is still visible long after midnight even by the end of the month. On the night of the 26th-27th the Moon passes 4° S. of Jupiter.

SATURN is an evening star, magnitude +0.9 and is visible in the southern sky in the early evenings. The Moon is near on the evenings of the 22nd and 23rd.

ASTRONOMICAL NOTES

MERCURY is at greatest eastern elongation on the 18th but as it is then 24° S. of the equator observation is extremely difficult. Observers with binoculars might locate it, half-an-hour after sunset, extremely low above the S.W. horizon, within a few days of the 22nd.

VENUS is an evening star, magnitude -3.4, visible low above the SW. horizon after sunset. On the evening of the 18th it is very close to the thin crescent Moon.

MARS is unsuitably placed for observation.

JUPITER is still a conspicuous evening star, magnitude -2.1. It reaches a stationary point on

the 6th and thereafter resumes its eastward motion through Pisces.

SATURN is an evening star, magnitude +1.0 but only visible in the early evenings low above the S.W. horizon.

ECLIPSE. A total eclipse of the Moon occurs on the 30th but it is not visible from the British Isles.

METEORS. The famous Geminid meteor shower occurs on the 13th. Conditions are favourable this year as moonlight will not interfere with observation. The number of meteors seen will increase as the evening progresses and the altitude of the radiant increases.

Diameter 2"

INTRODUCTION TO ASTRONOMICAL SECTION

GENERAL

The astronomical data are given in a form suitable for those who practise naked-eye astronomy or use small telescopes. No attempt has been made to replace the *Astronomical Ephemeris* for professional astronomers. Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

All data are, unless otherwise stated, for 0^h G.M.T., or the midnight at the beginning of the day named. No allowance is made for Summer Time, the dates of which, although given by the Summer Time Act, 1925, may be altered by Order in Council.

Definitions of the terms used cannot be given in an ephemeris of this nature. They must be sought in astronomical literature and text-books. Probably the best source for the amateur is Norton's *Star Atlas* (Gall and Inglis, 14th edition, 1959; 17s. 6d.), which contains an excellent introduction to observational astronomy, and the finest series of star maps yet produced for showing stars visible to the naked eye. Certain more extended ephemerides are available in the British Astronomical Association Handbook, an annual very popular among amateur astronomers. (Secretary: 303 Bath Road, Hounslow West, Middlesex.)

A special feature has been made of the times when the various heavenly bodies are visible in the British Isles. Since two columns, calculated for latitudes 52° and 56°, are devoted to risings and settings, the range 50° to 58° is covered by interpolation and extrapolation. The times given in these columns are G.M.T.'s for the meridian of Greenwich. An observer west of this meridian must add his longitude (in time) and vice versa. Allowance must also be made for Summer Time if in force.

In accordance with the usual convention in astronomy, + and - indicate respectively north and south latitudes or declinations.

PAGE I OF EACH MONTH

The Zodiacal signs through which the Sun is passing during each month are illustrated. The date of transition from one sign to the next, to the nearest hour, is also given.

The FASTS AND FESTIVALS in black-letter type are those so given in the Prayer Book. The line immediately to the right of the Day of Week is shown heavy when the Law Courts are sitting in London.

Under the heading PHENOMENA will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of eclipses and other astronomical phenomena of special interest.

The CONSTELLATIONS listed each month are those that are near the meridian at the beginning of the month at 22^h local mean time. Allowance must be made for Summer Time if necessary. The fact that any star crosses the meridian 4^m earlier each night or 2^h earlier each month may be used,

in conjunction with the lists given each month, to find what constellations are favourably placed at any moment. The table preceding the list of constellations may be extended indefinitely at the rate just quoted.

Times of MINIMA OF ALGOL are approximate times of the middle of the period of diminished light (see p. 152).

The principal PHASES OF THE MOON are the G.M.T.'s when the difference between the longitude of the Moon and that of the Sun is 0°, 90°, 180° or 270°. The times of perigee and apogee are those when the Moon is nearest to, and farthest from the Earth, respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and the inclination, whose value does not vary much from 5°, the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

The MONTHLY NOTES are self-explanatory.

PAGE II OF EACH MONTH

The Sun's semi-diameter, in arc, is given once a month.

The right ascension given is that of the true Sun. The right ascension of the mean Sun is obtained by applying the equation of time, with the sign given, to the right ascension of the true Sun, or, more easily, by applying 12^h to the column Sidereal Time. The direction in which the equation of time has to be applied in different problems is a frequent source of confusion and error. Apparent Solar Time is equal to the Mean Solar Time plus the Equation of Time. For example at noon on Aug. 8 the Equation of Time is -5^m 38^s and thus at 12^h Mean Time on that day the Apparent Time is 12^h - 5^m 38^s = 11^h 54^m 22^s.

The Sidereal Time at 0^h and the Transit of the First Point of Aries (which is really the mean time when the sidereal time is 0^h) are used for converting mean time to sidereal time and vice versa.

The G.M.T. of transit of the Sun at Greenwich may also be taken as the L.M.T. of transit in any longitude. It is independent of latitude. The G.M.T. of transit in any longitude is obtained by adding the longitude to the time given if west, and vice versa.

The legal importance of SUNRISE and SUNSET is that the Road Traffic Act, 1956, defines Lighting-up Time for vehicles as being from half an hour after sunset to half an hour before sunrise throughout the year. In all laws and regulations "sunset" refers to the local sunset, i.e. the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals. Thus the necessity for providing for different latitudes and longitudes, as already described, is evident.

The times of SUNRISE and SUNSET are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sea-level. Assuming the mean refraction to be 34', and the Sun's semi-diameter to be 16', the time given is that when the true zenith distance of the

Sun's centre is $90^\circ + 34' + 16'$ or $90^\circ 50'$, or, in other words, when the depression of the Sun's centre below the true horizon is $50'$. The upper limb is then $34'$ below the true horizon, but is brought there by refraction. It is true, of course, that an observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is $90^\circ 50'$ is a precise time dependent only on the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's semi-diameter; this moment is suitable in every way as a definition of sunset (or sunrise) for all statutory purposes.

It is well known that light reaches us before sunrise and also continues to reach us for some time after sunset. The interval between darkness and sunrise or sunset and darkness is called twilight. Astronomically speaking, twilight is considered to begin or end when the Sun's centre is 18° below the horizon, as no light from the Sun can then reach the observer. As thus defined twilight may last several hours; in high latitudes at the solstices the depression of 18° is not reached, and twilight lasts from sunset to sunrise.

The need for some sub-division of twilight was met some years ago by dividing the gathering darkness into four steps.

- (1) *Sunrise or Sunset*, defined as above.
- (2) *Civil twilight*, which begins or ends when the Sun's centre is 6° below the horizon. This marks the time when operations requiring daylight may commence or must cease. In England it varies from about 30 to 60 minutes after sunset.
- (3) *Nautical twilight*, which begins or ends when the Sun's centre is 12° below the horizon. This marks the time when it is, to all intents and purposes, completely dark.
- (4) *Astronomical twilight*, which begins or ends when the Sun's centre is 18° below the horizon. This marks theoretical perfect darkness. It is not of practical importance, especially if nautical twilight is tabulated.

To assist observers the durations of civil, nautical and astronomical twilights are given at intervals of ten days. The beginning of a particular twilight is found by subtracting the duration from the time of sunrise, while the end is found by adding the duration to the time of sunset. Thus the beginning of astronomical twilight in latitude 52° , on the Greenwich meridian, on March 11 is found as $06^h 26^m - 113^m = 04^h 33^m$ and similarly the end of civil twilight as $17^h 56^m + 34^m = 18^h 30^m$.

The letters T.A.N. are printed when twilight lasts all night.

Lighting-up time is a crude attempt to approximate to civil twilight over the British Isles.

Under the heading ASTRONOMICAL NOTES will be found notes describing the position and visibility of the planets and also of other phenomena; these are intended to guide naked-eye observers, or those using small telescopes.

PAGE III OF EACH MONTH

The Moon moves so rapidly among the stars that its position is given only to the degree of accuracy that permits linear interpolation. The right ascension and declination are geocentric, i.e. for an imaginary observer at the centre of the Earth. To an observer on the surface of the Earth the position is always different, as the altitude is always less on account of parallax which may reach 1° .

The lunar terminator is the line separating the bright from the dark part of the Moon's disk. Apart from irregularities of the lunar surface, the terminator is elliptical, because it is a circle seen in projection. It becomes the full circle forming the limb, or edge, of the Moon at New and Full Moon. The selenographic longitude of the terminator is measured from the mean centre of the visible disk, which may differ from the visible centre by as much as 8° , because of libration.

Instead of the longitude of the terminator the Sun's selenographic colongitude is tabulated. It is numerically equal to the selenographic longitude of the morning terminator, measured eastward from the mean centre of the disk. Thus its value is approximately 270° at New Moon, 360° at First Quarter, 90° at Full Moon and 180° at Last Quarter.

The Position Angle of the Bright Limb is the position angle of the midpoint of the illuminated limb, measured eastwards from the north point on the disk. The column PHASE shows the percentage of the area of the Moon's disk illuminated; this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps, and whose semi-minor axis is determined by the tabulated percentage; from New Moon to Full Moon the east limb is dark, and vice versa.

The times given as moonrise and moonset are those when the upper limb of the Moon is on the horizon of an observer at sea-level. The Sun's horizontal parallax is about $9''$, and is negligible when considering sunrise and sunset, but that of the Moon averages about $57'$. Hence the computed time represents the moment when the true zenith distance of the Moon is $90^\circ 50'$ (as for the Sun) minus the horizontal parallax. The time required for the Sun or Moon to rise or set is about four minutes.

The tables have been constructed for the meridian of Greenwich, and for latitudes 52° and 56° . They give Greenwich Mean Time (G.M.T.) throughout the year; if Summer Time (B.S.T.) is in force, one hour must be added to get the time shown by civil clocks. To obtain the G.M.T. of the phenomenon as seen from any other latitude and longitude, first interpolate or extrapolate for latitude by the usual rules of proportion. To the time thus found the longitude (expressed in time) is to be added if west (as it usually is in Great Britain) or subtracted if east. If the longitude is expressed in degrees and minutes of arc, it must be converted to time at the rate of $1^\circ = 4^m$ and $15' = 1^m$.

The G.M.T. of transit of the Moon over the meridian of Greenwich is given: these times are independent of latitude, but must be corrected for

longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa. For more remote places a further correction is necessary because of the rapid movement of the Moon relative to the stars. The entire correction is conveniently determined by first finding the west longitude λ of the place. If the place is in west longitude, λ is the ordinary west longitude; if the place is in east longitude λ is the complement to 24^h (or 360°) of the longitude, and will be greater than 12^h (or 180°). The correction then consists of two positive portions, namely λ and the fraction $\lambda/24$ (or $\lambda/360$) multiplied by the difference between consecutive transits. Thus for Sydney, N.S.W., the longitude is $10^h 05^m$ east, so $\lambda = 13^h 55^m$ and the fraction $\lambda/24$ is 0.58. The transit on the local date 1963 Aug. 9 is found as follows:

	d	h	m
G.M.T. of transit at Greenwich.... Aug. 8	02	25	
λ		13	55
$0.58 \times (3^h 16^m - 2^h 25^m)$			30

G.M.T. of transit at Sydney.....	8	16	50
Corr. to N.S.W. Standard Time....		10	00

Local standard time of transit	9	02	50

It is evident, of course, that for any given place the quantities λ and the correction to local standard time may be combined permanently, being here $23^h 55^m$.

Positions of Mercury are given for every third day, and those of Venus and Mars for every fifth day; they may be interpolated linearly. The column PHASE shows the illuminated percentage of the disk. In the case of the inner planets this approaches 100 at superior conjunction and 0 at inferior conjunction. When the phase is less than 50 the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 at conjunction and opposition, and is a minimum at the quadratures.

Since the planets cannot be seen when on the horizon, the actual times of rising and setting are not given; instead, the time when the planet has an apparent altitude of 5° has been tabulated. The phenomenon tabulated is the one that occurs between sunset and sunrise; unimportant exceptions to this rule may occur because changes are not made during a month, except in the case of Mercury. The times given may be interpolated for latitude and corrected for longitude as in the case of the Sun and Moon.

The G.M.T. at which the planet transits the Greenwich meridian is also given. The times of transit are to be corrected to local meridians in the usual way, as already described.

PAGE IV OF EACH MONTH

The G.M.T.'s of Sunrise and Sunset may be used not only for these phenomena, but also for Lighting-up Times, which, under the Road Traffic Act, 1956, are from half an hour after sunset to half an hour before sunrise throughout the year.

The particulars for the four outer planets resemble those for the planets on Page III of each month, except that, under Uranus and Neptune, times when the planet is 10° high instead of 5° high are given; this is because of the inferior brightness of these planets. The polar diameter of Jupiter is about $3''$ less than the equatorial diameter, while that of Saturn is about $2''$ less. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former has a small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The rings were completely closed in September, 1950, and open at their widest extent in the middle of 1958.

TIME

From the earliest ages, the natural division of time into recurring periods of day and night has provided the practical time scale for the everyday activities of mankind. Indeed, if any alternative means of time measurement is adopted, it must be capable of adjustment so as to remain in general agreement with the natural time scale defined by the diurnal rotation of the Earth on its axis. Ideally the rotation should be measured against a fixed frame of reference; in practice it must be measured against the background provided by the celestial bodies. If the Sun is chosen as the reference point, we obtain Apparent Solar Time, which is the time indicated by a sundial. It is not a uniform time, but is subject to variations which amount to as much as a quarter of an hour in each direction. Such wide variations cannot be tolerated in a practical time scale, and this has led to the concept of Mean Solar Time in which all the days are of exactly the same length and equal to the average length of the Apparent Solar Day.

The positions of the stars in the sky are specified in relation to a fictitious reference point in the sky known as the First Point of Aries (or the Vernal Equinox). It is therefore convenient to adopt this same reference point when considering the rotation of the Earth against the background of the stars. The time scale so obtained is known as Apparent Sidereal Time.

Greenwich Mean Time

The diurnal rotation of the Earth on its axis causes the Sun and the other heavenly bodies to appear to cross the sky from East to West. It is convenient to represent this relative motion as if the Sun really performed a daily circuit around a fixed Earth. Noon in Apparent Solar Time may then be defined as the time at which the Sun transits across the observer's meridian. In Mean Solar Time, noon is similarly defined by the meridian transit of a fictitious Mean Sun moving uniformly in the sky with the same average speed as the true Sun. Mean Solar Time observed on the meridian of the transit circle telescope of the Royal Observatory at Greenwich is called Greenwich Mean Time (G.M.T.) The mean solar day is divided into 24 hours and, for astronomical

and scientific purposes, these are numbered 0 to 23, commencing at midnight. Civil time is usually reckoned in two periods of 12 hours, designated a.m. (before noon) and p.m. (after noon): Civil time is also usually advanced by one hour during summer time (see later), whereas G.M.T. remains unchanged.

Universal Time

Before January 1, 1925 G.M.T. was reckoned in 24 hours commencing at noon: since that date it has been reckoned from midnight. In view of the risk of confusion in the use of the designation G.M.T. before and after 1925, the International Astronomical Union recommended in 1928 that astronomers should, for the present, employ the term Universal Time, U.T. (or Weltzeit, W.Z.) to denote G.M.T. measured from Greenwich Mean Midnight.

In precision work it has now become necessary to take account of small variations, hitherto negligible, in Universal Time. These arise from small irregularities in the rotation of the Earth. Observed astronomical time is designated U.T.0. Observed time corrected for the effects of the motion of the poles (giving rise to a "wandering" in longitude) is designated U.T.1. There is also a seasonal fluctuation in the rate of rotation of the Earth arising from meteorological causes, often called the annual fluctuation. U.T.1 corrected for this effect is designated U.T.2, and provides a time scale free from short-period fluctuations. It is still subject to small secular and irregular changes.

Apparent Solar Time

As has been mentioned, the time shown by a sundial is called Apparent Solar Time. It differs from Mean Solar Time by an amount known as the Equation of Time, which is the total effect of two causes which make the length of the apparent solar day non-uniform. One cause of variation is that the orbit of the Earth is not a circle, but an ellipse, having the Sun at one focus. As a consequence, the angular speed of the Earth in its orbit is not constant; it is greatest at the beginning of January when the Earth is nearest the Sun. The other cause is due to the obliquity of the ecliptic; the plane of the equator (which is at right-angles to the axis of rotation of the Earth) does not coincide with the ecliptic (the plane defined by the apparent annual motion of the Sun around the celestial sphere) but is inclined to it at an angle of 23° 27'. As a result, the apparent solar day is shorter than average at the equinoxes and longer at the solstices. From the combined effects of the components due to obliquity and eccentricity, the equation of time reaches its maximum values in February (-14 mins.) and early November (+16 mins.). It has a zero value on four dates during the year, and it is only on these dates (approx. April 15, June 14, Sept. 1, and Dec. 25) that a sundial shows Mean Solar Time.

Sidereal Time

A sidereal day is the duration of a complete rotation of the Earth with reference to the First Point of Aries. The term sidereal (or "star") time is perhaps a little misleading since the time scale so defined is not exactly the same as that which would

be defined by successive transits of a selected star, as there is a small progressive motion between the stars and the First Point of Aries due to the precession of the Earth's axis. This makes the length of the sidereal day shorter than the true period of rotation by 0.008 seconds. Superimposed on this steady precessional motion are small oscillations called nutation, giving rise to fluctuations in apparent sidereal time amounting to as much as 1.2 seconds. It is therefore customary to employ Mean Sidereal Time, from which these fluctuations have been removed. The conversion of G.M.T. to Greenwich sidereal time (G.S.T.) may be performed by adding the value of the G.S.T. at 0^h on the day in question (page II of each month) to the G.M.T. converted to sidereal time using the table on p. 145.

Example. To find the G.S.T. at 2^h 41^m 11^s G.M.T. on Aug. 8

					h	m	s
G.S.T. at 0 ^h	21	03	08
G.M.T.	2	41	11
Acceleration for 2 ^h			20
"	4 ^m 11 ^s		7
<hr/>							
Sum = G.S.T. =	23	44	46

If the observer is not on the Greenwich meridian then his longitude, measured positively westwards from Greenwich, must be subtracted from the G.S.T. to obtain Local Sidereal Time (L.S.T.). Thus, in the above example, an observer 5^h east of Greenwich, or 19^h west, would find his L.S.T. as 4^h 44^m 46^s.

Ephemeris Time

In the study of the motions of the Sun, Moon and planets, observations taken over an extended period are used in the preparation of tables giving the apparent position of the body each day. A table of this sort is known as an ephemeris, and may be used in the comparison of current observations with tabulated positions. A detailed examination of the observations made over the past 300 years shows that the Sun, Moon and planets appear to depart from their predicted positions by amounts proportional to their mean motions. The only satisfactory explanation is that the time scale to which the observations were referred was not uniform as had been supposed. Since the time scale was based on the rotation of the Earth, it follows that this rotation is subject to irregularities. The fact that the discrepancies between the observed and ephemeris positions were proportional to the mean motions of the bodies made it possible to secure agreement by substituting a revised-time scale and recomputing the ephemeris positions. The time scale which brings the ephemeris into agreement with the observations has been named Ephemeris Time (E.T.).

The new unit of time has been defined in terms of the apparent annual motion of the Sun. Thus the second is now defined in terms of the annual motion of the Earth in its orbit around the Sun (1/31556925.9747 of the Tropical Year for 1900 January 0 at 12 h. E.T.) instead of in terms of the diurnal rotation of the Earth on its axis (1/86 400 of the Mean Solar Day). In many

branches of scientific work other than astronomy there has been a demand for a unit of time that is invariable, and the second of Ephemeris time was adopted by the Comité International des Poids et Mesures in 1956. The length of the unit has been chosen to provide general agreement with U.T. throughout the 19th and 20th centuries. During 1963 the estimated difference E.T.—U.T. is 35 seconds. The precise determination of E.T. from astronomical observations is a lengthy process, as the accuracy with which a single observation of the Sun can be made is far less than that obtainable in, for instance, a comparison between clocks. It is therefore necessary to average the observations over an extended period. Largely on account of its faster motion, the position of the Moon may be observed with greater accuracy, and a close approximation to Ephemeris Time may be obtained by comparing observations of the Moon with its ephemeris position. Even in this case, however, the requisite standard of accuracy can only be achieved by averaging over a number of years.

Atomic Time

The fundamental standards of time and frequency must be defined in terms of a periodic motion adequately uniform, enduring and susceptible of measurement. This has led in the past to the adoption of standards based on the observed motions in the Solar System. Recent progress has made it possible to consider the use of other natural standards, such as atomic or molecular oscillations. The oscillations so far employed are not in fact continuous periodic motions such as the revolution of the electrons in their orbits around the nuclei. The continuous oscillations are generated in an electrical circuit, the frequency of which is then compared or brought into coincidence with the frequency characteristic of the absorption or emission by the atoms or molecules when they change between two selected energy levels. At the National Physical Laboratory regular comparisons have been made since the middle of 1955 between quartz clocks of high stability and a frequency defined by atoms of caesium. The standard has proved of great value in the precise calibration of frequencies and time intervals: it has also been possible to build up a scale of "atomic time" by using continuously-running quartz clocks calibrated in terms of the caesium frequency standard. Because of the high precision attained in the comparisons, cumulative errors in the integrated time scale do not become serious in the course of a few years. and the atomic time scale may thus be compared with the astronomical time scale.

Radio Time Signals

The establishment of a uniform time system by the assessment of the performance of standard clocks in terms of astronomical observations is the work of a national observatory, and standard time is then made generally available by means of radio time signals. In the United Kingdom, the Royal Greenwich Observatory is responsible for the legal standard of time, and controls the "6-pips" radio signals emitted by the British Broadcasting Corporation. Signals by land line from the Observa-

tory correct the Post Office Speaking Clock, TIM.

For survey and scientific purposes in which the highest accuracy is required, special signals are transmitted from the Post Office Radio Station at Rugby. The International Signals, consisting of a five-minute series of pips, one-tenth of a second long, with the pips at the minutes lengthened for identification, are radiated at 02.55–03.00, 08.55–09.00, 09.55–10.00 and 14.55–15.00, 17.55–18.00 and 20.55–21.00 from GBR (16 kc/s) and associated H.F. transmitters. The seconds pulses superposed on the MSF standard frequency transmissions, which consist of five cycles of a 1,000 c.p.s. tone, are derived from the same master control at the transmitting station, and are radiated for ten minutes in each quarter-hour on 2½, 5, and 10 Mc/s for 24-hours per day, and on 60 kc/s from 14.29–15.30. The carrier frequencies of all the MSF transmissions, and of GBR, are closely controlled, and measured regularly at the National Physical Laboratory in terms of the caesium atomic resonance. The time signals, derived from the same master oscillator, and thus rigidly locked to the carrier frequencies, are monitored regularly at the Royal Greenwich Observatory. A uniform rate is maintained throughout the year and, if corrections are required to keep the time signals in agreement with UT₂, a step adjustment of 50 milliseconds is made on all transmissions on the first day of a month. Since April 1960 the Rugby service has been run in close co-operation with the time services of the United States. By mutual agreement, the rates are adjusted to correspond, and the signals are synchronised. Any necessary adjustments are made simultaneously in the U.K. and U.S.A. services. The American transmissions concerned are: WWV (Beltsville) 2½, 5, 10, 15, 20, 25 Mc/s; WWVH (Hawaii) 5, 10, 15 Mc/s; NBA (Canal Zone) 18 kc/s. Other national observatories have agreed to some measure of co-ordination.

SUMMER TIME

In the United Kingdom, Summer Time, one hour ahead of G.M.T., was in force in 1962 between 02^h G.M.T. on March 25 and 02^h G.M.T. on October 28. The Home Secretary proposed to seek approval of Parliament for an Order in Council extending the dates of Summer Time in 1963 to run from March 31 to October 27, 1963.

Variations of the Standard time may be used abroad and the dates of adoption are decided annually. In some countries the variations occur in winter and are called Winter Time†.

STANDARD TIME

In the year 1880 it was enacted by statute that the word "time", when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.* Other nations similarly used the time of their own capital, but since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now almost throughout the world a Standard Time which differs from that of Greenwich by an integral number of hours, either fast or slow, is used. In some countries (†) Standard Time is no longer used and the time given in the table below is that in normal use.

The large territories of the United States, Canada and U.S.S.R. are divided into zones approximately $7\frac{1}{2}^{\circ}$ on either side of central meridians. The important ones are given below; there are in addition zones from 5 to 13 hours fast in the U.S.S.R., centred at 60° E. to 180° E.

Fast on Greenwich Time.

- 12 hrs. F...Fiji, Gilbert and Ellice Is., New Zealand, Marshall Is., Caroline Is. (east of 160° E.).
- 11½ .. F...Norfolk I., Nauru I.
- 11 .. F...New Caledonia, New Hebrides, Santa Cruz and Solomon Is., Truk, Ponape.
- 10 .. F...Sakhalin north of 50° N., Victoria, N.S.W. (except Broken Hill Area), Queensland, Tasmania, British New Guinea, Admiralty Is., Caroline Is. (west of 160° E.), Australian Capital Territory, Marianas Is.
- 9½ .. F...South Australia, Northern Territory of Australia, N.S.W. (Broken Hill Area), Dutch New Guinea.
- 9 .. F...Japan, Kei, Aru, Schouten Is., Sakhalin south of 50° N., Kurile Is., Manchuria, Korea.
- 8½ .. F...Molucca Is.
- 8 .. F...China (coast), Hong Kong, Philippine Is., Labuan, Macao, Timor, West Australia, Celebes, Sarawak, N. Borneo, Formosa, Pescadores Is., Vietnam.
- 7½ .. F...Federation of Malaya, Singapore, Indonesian Borneo and Java.

In the Tonga Islands the time 13^h fast and in Chatham Is. † $12h 45^m$ fast on Greenwich is used, as the Date line is to the East of them.

THE DATE OR CALENDAR LINE

The line where the change of date occurs is a modification of the 180th meridian, and is drawn so as to include islands of any one group on the same side of the line, or for political reasons. It is indicated by joining up the following nine points:

Lat.	Long.	Lat.	Long.	Lat.	Long.
60° S.	180°	15° S.	$172\frac{1}{2}^{\circ}$ W.	53° N.	170° E.
51° S.	180°	5° S.	180°	$65\frac{1}{2}^{\circ}$ N.	169° W.
45° S.	$172\frac{1}{2}^{\circ}$ W.	48° N.	180°	75° N.	180°

* Summer Time is the "legal" time during the period in which its use is ordained.

The local mean time of sunrise or sunset (as defined on page 138) may be found by determining the appropriate hour angle from the table above and subtracting it from or adding it to the time of transit given in the ephemeris for each month. The resulting local mean time may be converted into the standard time of the country by taking the difference between the longitude of the standard meridian of the country and that of the place, and adding it to the local mean time if the place is west of the standard meridian, and subtracting it if the place is east of the standard meridian.

Example.—Required the N.Z. Mean Time (12^h fast on G.M.T.) of sunset on May 24 at

Auckland. The latitude is 36° 50' south (or minus) and the longitude 12^h 39^m east. Taking the declination as +20°.7, we find

This table gives the correction to be applied to an observed altitude of *Polaris* (first corrected for dip, refraction and instrumental error) to give the latitude. It is correct within 1' throughout the year for all latitudes up to 60°.

Example.—On August 8 at 23^h 10^m G.M.T. in longitude 2^h 34^m west, the altitude of *Polaris* (corrected for dip, etc.) is found to be 42° 56'.

The local sidereal time is found by the method given on page 141 to be 17^h 43^m. Hence

Observed latitude	41 56
Correction from table	+30
Latitude	42 26

MEAN AND SIDEREAL TIME

MEAN REFRACTION

Acceleration				Retardation				Alt. Ref.		
h	m	s		h	m	s		Alt. Ref.	Alt. Ref.	
1	0	10	13 2 08	0 00	0	1	0 10	13 2 08	0 00	0
2	0	20	14 2 18	3 02	1	2	0 20	14 2 18	3 03	1
3	0	30	15 2 28	9 07	2	3	0 29	15 2 27	9 09	2
4	0	39	16 2 38	15 13	3	4	0 39	16 2 37	15 15	3
5	0	49	17 2 48	21 18	4	5	0 49	17 2 47	21 21	4
6	0	59	18 2 57	27 23	5	6	0 59	18 2 57	27 28	5
7	1	09	19 3 07	33 28	6	7	1 09	19 3 07	33 34	6
8	1	19	20 3 17	39 34	7	8	1 19	20 3 17	39 40	7
9	1	29	21 3 27	45 39	8	9	1 28	21 3 26	45 46	8
10	1	39	22 3 37	51 44	9	10	1 38	22 3 36	51 53	9
11	1	48	23 3 47	57 49	10	11	1 48	23 3 46	57 59	10
12	1	58	24 3 57	60 00	10	12	1 58	24 3 56	60 00	10

The length of a sidereal day in mean time is 23^h 56^m 04^s.09. Hence 1^h M.T. = 1^h + 9^s.86 S.T. and 1^h S.T. = 1^h - 9^s.83 M.T.

To convert an interval of mean time to the corresponding interval of sidereal time, enter the acceleration table with the given mean time (taking the hours and the minutes and seconds separately) and add the acceleration obtained to the given mean time. To convert an interval of sidereal time to the corresponding interval of mean time, take out the retardation for the given sidereal time and subtract.

The columns for the minutes and seconds of the argument are in the form known as Critical Tables. To use these tables, find in the appropriate left-hand column the two entries between which the given number of minutes and seconds lies; the quantity in the right-hand column between these

two entries is the required acceleration or retardation. Thus the acceleration for 11^m 26^s (which lies between the entries 9^m 07^s and 15^m 13^s) is 2^s. If the given number of minutes and seconds is a tabular entry, the required acceleration or retardation is the entry in the right-hand column above the given tabular entry; e.g. the retardation for 45^m 46^s is 7^s.

Example.—Convert 14^h 27^m 35^s from S.T. to M.T.

Given S.T.....	14 27 35
Retardation for 14 ^h	2 18
Retardation for 27 ^m 35 ^s	5

Corresponding M.T..... 14 25 12
For further explanation, see p. 141.

The refraction table is also in the form of a critical table.

CELESTIAL PHENOMENA FOR OBSERVATION IN 1963

ECLIPSES, 1963

During 1963 there will be four eclipses, two of the Sun and two of the Moon.

1. An annular eclipse of the Sun on January 25, not visible from the British Isles. The path of the annular phase crosses southern Argentina, South Africa and Madagascar. The partial phase is visible from the southern part of S. America, Antarctica, the southern part of Africa, and Madagascar.

2. A partial eclipse of the Moon on July 6, visible from the British Isles. The eclipse is visible from Australia, Asia, Africa, Europe and S. America. The Moon enters the Earth's umbral shadow at 20^h 32^m and leaves again at 23^h 33^m. At the middle of the eclipse, which is at 22^h 02^m, seven-tenths of the Moon will be obscured; the northern regions will remain visible.

Observers in southern parts of the British Isles will see the Moon rise shortly before the eclipse commences, but from Scotland the eclipse begins at, or just before, moonrise.

3. A total eclipse of the Sun on July 20, not visible from Greenwich. The path of totality begins in Japan and then crosses the Bering Straits and into Alaska and Canada. The partial phase of the eclipse is visible from Japan and parts of extreme north-east Asia, North and Central America, the northern parts of S. America, Greenland, Iceland, northern and western Scandinavia, Scotland and Ireland.

Observers in Scotland and Ireland will see only a very small partial eclipse. The eclipse commences only a short while before sunset so that the sun will be only a few degrees above the W.N.W.-N.W. horizon. The sun will set still partially eclipsed, and some time before the time of maximum phase. The eclipse starts in Scotland at about 20^h 25^m and at about 20^h 30^m in Ireland.

4. A total eclipse of the Moon on December 30, not visible from the British Isles. This eclipse is visible from North America and the north-west of South America, Australasia and Asia, and the north-eastern part of Europe.

OCCULTATIONS, 1963

This year is a very poor one for occultation observers in the British Isles as not a single bright star or planet undergoes occultation. The brightest star occulted is ζ Tauri (3^m.0), during the small hours of December 2.

No first magnitude star will be occulted again before 1967.

Occultation Observations.—Observations of the times of these occultations are made by both amateurs and professionals. Such observations are later analysed to yield accurate positions of the Moon; this is one method of determining the difference between ephemeris time and universal time.

Many of the observations made by amateurs are obtained with the use of a stop-watch which is compared with a time-signal immediately after the observation. Thus an accuracy of about one-fifth of a second is obtainable, though the observer's

personal equation may amount to one-third or one-half of a second.

OCCULTATIONS OF STARS

The list on the opposite page includes all the occultations visible under favourable conditions in the British Isles. Disappearances of stars down to magnitude 6.9 are normally included, and reappearances to fifth magnitude only. No occultation is included unless the star is at least 10° above the horizon and the Sun sufficiently far below the horizon to permit the star to be seen with the naked eye or in a small telescope. The altitude limit is reduced from 10° to 2° for stars and planets brighter than magnitude 2.0 and such occultations are also predicted in daylight.

The column Phase shows whether a disappearance (D) or reappearance (R) is to be observed. Times and position angles (P), reckoned from the north point in the direction north, east, south, west, are given for Greenwich (Lat. 51° 29', Long. 0°) and Edinburgh (Lat. 55° 55', Long. 3° 11' west). The coefficients *a* and *b* are the variations in the G.M.T. for each degree of longitude (positive to the west) and latitude (positive to the north) respectively; they enable approximate times (to within about 1^m generally) to be found for any point in the British Isles. If the point of observation is $\Delta\lambda$ degrees west and $\Delta\lambda'$ degrees north, the approximate time is found by adding $a.\Delta\lambda + b.\Delta\lambda'$ to the given G.M.T.

As an illustration the disappearance of ζ Tauri on December 2 at Liverpool will be found from both Greenwich and Edinburgh.

	Greenwich	Edinburgh
Longitude	0.0	3.2
Long. of Liverpool	+3.0	+3.0
$\Delta\lambda$	+3.0	-0.2
Latitude	51.5	55.9
Lat. of Liverpool	53.4	53.4
$\Delta\phi$	+1.9	-2.5
	h m	h m
G.M.T.	1 20.6	1 12.5
<i>a</i> . $\Delta\lambda$	-4.5	+0.3
<i>b</i> . $\Delta\phi$	-2.5	+1.0
G.M.T. at Liverpool	1 13.6	1 13.8

If the occultation is given for one station but not the other, the reason for the suppression is given by the following code.

- No occn. = star not occulted.
- Low = star's altitude less than 10° (2° for bright stars and planets).
- Sun = Sun not sufficiently below the horizon.
- Graze = occultation is of very short duration.

It will be noticed that in some cases the coefficients *a* and *b* are not given; this is because the occultation is so short that prediction for other places by means of these coefficients would not be reliable.

The positions of heavenly bodies on the celestial sphere are defined by two co-ordinates, right ascension and declination, which are analogous to longitude and latitude on the surface of the Earth. If we imagine the plane of the terrestrial equator extended indefinitely, it will cut the celestial sphere in a great circle known as the celestial equator. Similarly the plane of the Earth's orbit, when extended, cuts in the great circle called the ecliptic. The two intersections of these circles are known as the First Point of Aries and the First Point of Libra. If from any star a perpendicular be drawn to the celestial equator, the length of this perpendicular is the star's declination. The arc, measured eastwards along the equator from the First Point of Aries to the foot of this perpendicular, is the right ascension. An alternative definition of right ascension is that it is the angle at the celestial pole (where the Earth's axis, if prolonged, would meet the sphere) between the great circles to the First Point of Aries and to the star.

The plane of the Earth's equator has a slow movement, so that our reference system for right ascension and declination is not fixed. The consequent alteration in these quantities from year to year is called precession. In right ascension it is an increase of about 3^s a year for equatorial stars, and larger or smaller amounts for stars near the pole. In declination it varies between +20" and -20" according to the right ascension of the star.

A star or other body crosses the meridian when the sidereal time is equal to its right ascension. The altitude is then a maximum, and may be deduced by remembering that the altitude of the elevated pole is numerically equal to the latitude, while that of the equator at its intersection with the meridian is equal to the co-latitude, or complement of the latitude.

Thus in London (Lat. $51^{\circ} 30'$) the meridian altitude of *Sirius* is found thus:

Altitude of equator.....	38	30
Declination south.....	16	40

Difference..... 21 50

The Altitude of *Capella* (Dec. $+45^{\circ} 58'$) at lower transit is:

Altitude of pole.....	51	30
Polar distance of Star... ..	44	02

Difference..... 7 28

The brightness of a heavenly body is denoted by its magnitude. Omitting the exceptionally bright stars *Sirius* and *Canopus*, the twenty brightest stars are of the first magnitude, while the faintest stars visible to the naked eye are of the sixth magnitude. The magnitude scale is a precise one, as a difference of five magnitudes represents a ratio of 100 to 1 in brightness. Typical second magnitude stars are *Polaris* and the stars in the Belt of Orion. The scale is most easily fixed in memory by comparing the stars with Norton's *Star Atlas* (see page 138). The stars *Sirius* and *Canopus* and the planets Venus and Jupiter are so bright that their magnitudes are expressed by negative numbers. A small telescope will show stars down to the ninth or tenth magnitude, while stars as faint as the twentieth magnitude may be photographed by long exposures with the largest telescopes.

Some of the astronomical information in this ALMANACK has been taken from the *Astronomical Ephemeris*, and is published here by arrangement with, and with the permission of, the Controller of H.M. Stationery Office.

* α Herculis, mag. 3.1 to 3.9.
 δ Cephei, mag. 3.7 to 4.4, Spectrum F₅ to G₀.

THE STRUCTURE OF THE UNIVERSE

The Solar System, although occupying a volume of space large by terrestrial standards, is only a very tiny fraction of the whole Universe. The Sun itself is just one of the millions of stars which make up our Galaxy, and our Galaxy is just one of the millions of galaxies which are distributed through the visible Universe. All these stars and galaxies are in motion, many of them with enormous velocities; yet they are so remote that to the naked eye they present almost the same configurations for a period of many thousands of years, and even with telescopic aid the measurement of their motions is a delicate matter. The nearest star is about 250,000 times as far away as the Sun, the Great Nebula in Andromeda, one of the few galaxies visible to the naked eye, is over 500,000 times as far away as the nearest star, and the largest telescopes can penetrate to a distance of at least 500 times that of the Andromeda Nebula. It is convenient to express astronomical distances in terms of the time that light takes to accomplish the journey. Light travels at the rate of 186,000 miles a second; it takes $1\frac{1}{2}$ seconds to reach us from the Moon, our nearest neighbour in space; just over 8 minutes to reach us from the Sun; four years from the nearest star; two million years from the Andromeda Nebula, and about 1000 million years from the most distant bodies yet photographed. We therefore talk about a star as being so many light years distant. Astronomers also use another unit of distance, the parsec. 1 parsec equals 3.26 light years.

THE STARS

The stars are classed according to their apparent brightness in magnitudes. A few of the brightest stars are brighter than the first magnitude. Stars as faint as the sixth magnitude can be seen by the naked eye. Stars fainter than this are not visible to the naked eye; the 200-inch telescope, the world's largest, on Mount Palomar in California, can photograph stars of the 23rd magnitude, which is about 650 million times fainter than the first magnitude. This large range in the apparent brightness of the stars is due to a combination of two factors. The first of these is distance. According to a standard law of optics, the apparent brightness of any given luminous object is inversely proportional to the square of its distance away. Thus, if two similar stars are at distances one of which is 10 times the other, the more distant star will appear to be 100 times fainter than the nearer star. The second factor affecting the apparent brightness of a star is its real intrinsic brightness. There are many different kinds of stars; some are very large luminous objects, others are small and faint.

The distances of the stars can be determined in a variety of ways. The direct trigonometric method consists in measuring the minute difference of direction of the star as seen from opposite sides of the Earth's orbit; this is always done photographically. The distances of about 15,000 stars have been measured in this way, but the method has very little accuracy for distances greater than about 250 light years. For more distant stars, distances may be estimated from a study of their spectra.

The distances of some double and variable stars can be found from their special characteristics. A star is said to be at a distance of one parsec if the radius of the Earth's orbit round the Sun subtends an angle of one second of arc at the star. As mentioned earlier, light takes 3.26 years to travel a distance of one parsec.

When the distance of any star has been determined, and its apparent magnitude measured, the real intrinsic brightness of the star may be determined. As a convenient convention, astronomers adopt as the "absolute magnitude" of a star (or other object) that apparent magnitude which the star would have if it were moved from its real position to a distance of ten parsecs. Conversely, if the absolute magnitude of a star is known by spectroscopic or other methods, and its apparent magnitude is observed, its distance may be calculated.

STELLAR SPECTRA

A large number of stars have been examined spectroscopically, and it is found that their spectra fall, with very few exceptions, into a sequence of types, denoted by the letters O, B, A, F, G, K, M; the types merge imperceptibly one into the next. O and B stars, exemplified by the three stars which form *Orion's* belt, have spectra showing helium and hydrogen lines. A stars, like *Vega* and *Sirius*, are characterized by very strong hydrogen lines. F, G and K stars, like *Procyon*, our *Sun*, and *Arcturus*, respectively, have spectra showing large numbers of metallic lines, and hydrogen lines much weaker than in A stars. Finally, the M stars, like *Betelgeuse* and *Antares*, show very complex molecular spectra, chiefly of titanium oxide. This sequence of spectral types O to M is essentially a temperature sequence, the O stars being the hottest and the M stars the coolest. Approximate values of the surface temperatures of the stars are, a value for the middle of each type being quoted in degrees Centigrade: O, 30,000°; B, 18,000°; A, 10,000°; F, 7,000°; G, 5,500°; K, 4,500°; M, 3,000°. The sequence O to M is also a sequence of colour, the O stars being the bluest and the M stars the reddest. The colour of a star is capable of precise definition and measurement; there is a very close correlation between colour and surface temperature, and between colour and spectral type. The latter correlation is so good that for many astrophysical purposes colour measurements are used instead of spectral types. There is the further advantage that colours can be measured for stars too faint for study by spectroscopic techniques.

When the spectral types (or colours) of a large number of stars are correlated with their absolute magnitudes, a surprising result emerges. The sequence O to M is one of decreasing absolute brightness. Approximate values of the absolute magnitudes of the stars are, a value for the middle of each type being quoted: O, -4; B, -2; A, +1; F, +3; G, +5; K, +7; M, +11. A graphical illustration of this relation between spectral type and absolute magnitude is known as the Hertzsprung-Russell Diagram (or, when colours are used

instead of spectral types, as a colour-magnitude diagram). The relationship represented by this diagram is one of the corner stones of modern astrophysics. The above series of stars of types O to M and absolute magnitude decreasing from -4 to $+11$, or fainter, is known as the "main sequence", and a large proportion of all known stars are members of this sequence. A relatively small proportion of the stars of spectral types O to M do not belong to the main sequence. Closer examination of the spectra of these stars reveals slight differences between their spectra and ordinary stars of nominally the same type on the main sequence. These differences are sufficiently characteristic to enable the two types of stars to be segregated spectroscopically without independent knowledge of their absolute magnitudes. These stars are found to be brighter than the corresponding main sequence stars of the same types. Most of those of types G, K and M have absolute magnitudes about 0; many of those of types O to F and a few of types G to M are still brighter, with absolute magnitudes ranging from -4 to -7 . The exceptional brightness of these stars is believed to be due to their sizes: those with absolute magnitudes about 0 are called giants, those of -4 to -7 are called supergiants.

The sizes of the stars have been determined mostly by calculation from known surface temperatures and absolute magnitudes. In very few cases direct determinations have been made by means of an interferometer, and sizes can also be inferred from observations of some eclipsing binary stars. The Sun is 864,000 miles in diameter. The main sequence is found to be a sequence of diminishing radii; an O star has a radius of about 20 times that of the Sun, while an average M star has a radius of one-third of the Sun. The giant stars of types G to M have radii between 10 and 100 times the Sun; supergiants have radii between 30 and 1000 times the Sun.

It is possible to determine the chemical composition of a star from a study of its spectrum. This has been done for main sequence stars and for giants and supergiants. All these stars appear to be of similar chemical composition, about 80 per cent by numbers of atoms being hydrogen, most of the remainder helium, heavier elements being less than one per cent of the total. All the differences between types O to M and main sequence, giant and supergiant stars can be accounted for by variations of surface temperature and of size (affecting the spectrum through the surface gravity).

A few stars cannot be classified according to the standard sequence O to M. Among these those classified as R and N stars show strong bands of carbon compounds instead of the titanium oxide of M stars, and the S stars show zirconium oxide instead of titanium oxide. A number of still less common types of stars show anomalous lines of strontium, barium, manganese, silicon, europium, lanthanum and other elements. The reasons for all these peculiarities are not known; it is probable that many of them are genuine differences from the standard chemical composition of the majority of the stars.

DOUBLE STARS

Many stars which appear single to the naked eye are found to be double in the telescope. These are frequently found to be in orbital motion round one another in periods varying from about one year to many thousands of years. Some binary stars are so close together that they cannot be seen separately even in large telescopes; their binary nature is revealed by the spectroscope. The varying motions of the stars in their orbits can be detected by the Doppler shifts of lines in their spectra. The periods of these stars, known as spectroscopic binaries, vary from a few hours to a few years. Some spectroscopic binaries are of special interest in that during their orbital motion the two components periodically eclipse each other, and the combined light of the two stars will vary. This happens when the Earth is nearly in the plane of the binary star orbits. Such binaries are called eclipsing variables, of which the best known is *Algol*, or β Persei, a star normally of the second magnitude (see p. I of each month).

VARIABLE STARS

We have already referred to the eclipsing variables, whose light variation is due to a geometrical cause. Some single stars vary in light. These include Cepheid variables, with periods of from a few hours up to about fifty days, long-period variables with periods of from a hundred to a thousand days, and numerous types of variable stars in which the periods and light fluctuations are entirely irregular. Many of these variations are attributed to pulsation of the stars by alternate expansion and contraction. The Cepheids are of particular interest because of the period-luminosity relation: the longer the period of a Cepheid the brighter is its mean absolute magnitude. An observation of the period of variation of the star immediately tells us its absolute magnitude and thence its distance.

Novæ are stars whose light increases by 10 to 15 magnitudes in a few days, and then fades gradually to normal brightness, reached a year or two later. The cause of the brightening is the sudden expansion of the star, but the reason for this is unknown. Supernovæ are stars whose brightness increases by up to 20 magnitudes; they are believed to be caused by the explosion of the whole star.

STAR CLUSTERS

Stars frequently occur in clusters; two types of clusters are known. The first, called open (or galactic) clusters, are groups of up to two or three hundred stars; the second, globular clusters, contain over one hundred thousand stars. The open clusters are found mainly in the neighbourhood of the Milky Way, the globular clusters avoid the Milky Way. Several open clusters are visible to the naked eye: the Pleiades, the Hyades and Praesepe are the best known of these. The colour-magnitude diagrams of open clusters are generally similar to those of nearby single stars; the most important difference is that when a cluster contains blue O and B stars it does not also contain red giant stars. The colour-magnitude diagrams of globular clusters are very similar among themselves, but

differ greatly from the diagrams of galactic clusters and nearby stars. The main sequence does not exist in any globular cluster for stars of types O, B and A; red giants are present in all the clusters, and they range up to absolute magnitude -3 . There is an additional sequence of stars with absolute magnitudes about 0 which is quite unlike any sequence in the diagrams for nearby stars.

INTERSTELLAR MATTER

The space between the stars is not empty; it contains a mixture of gas and dust which serves to dim the light of distant objects and tends to make them appear redder than normal. Very distant objects may be obscured completely if they lie in or near the plane of the Milky Way. The density of interstellar gas averages one atom in each cubic centimetre; this may be compared with a density 26 million million million times as great in ordinary air at normal pressure and temperature. As is the case for cosmic material in general, hydrogen predominates in interstellar gas. In addition to this widely distributed matter, there are denser clouds of gas and dust existing locally. These are frequently in evidence as dark clouds in front of a brighter stellar background. Some clouds have hot stars embedded, and the interstellar gas may then shine either by reflection of the starlight or it may be heated until it glows and emits its own characteristic light. Such dense glowing clouds are termed galactic nebulae. Sometimes the cloud is more regular in shape and is excited by one star; such clouds are termed planetary nebulae, and the Ring Nebula in Lyra is an excellent example of these objects. Planetary nebulae are among the denser interstellar formations; their densities range up to 20,000 atoms per cubic centimetre. Hot stars can make ordinary interstellar gas glow even when the density is low; the spherical region of glowing gas surrounding a hot star is termed an ionized-hydrogen region. These regions are of particular interest for the study of the Galaxy and of extragalactic nebulae because they are relatively bright and can be seen at large distances.

THE GALAXY

A cursory glance at the sky is sufficient to show that the fainter stars are concentrated towards the region of the Milky Way. This implies that the stars form a flattened system, which extends farther in the direction of the Milky Way than it does at right angles to it. It is now known that this system, called the Galaxy, is about 100,000 light years in diameter, and has a thickness of less than 5000 light years. The Milky Way is the centre plane of the system. We in the Solar System are situated at about 27,000 light years from the centre, and not far from the central plane. All the objects mentioned earlier, single and multiple stars, variable stars, novae and supernovae, galactic and globular clusters, interstellar gas, dust and galactic and planetary nebulae, form part of the Galaxy. The distribution of these various objects in the Galaxy is not all alike. The hot O and B stars, galactic clusters and Interstellar matter are closely concentrated towards the Milky Way plane, mostly lying within 300 light years on either side of the plane. The stars of types A to M tend to be

less closely concentrated to the plane; globular clusters show hardly any concentration, forming a nearly spherical distribution stretching to over 30,000 light years from the plane. Most Cepheid variables with periods of more than a day are closely concentrated to the galactic plane; those with periods of less than a day have a distribution similar to that of globular clusters.

The Galaxy has a spiral structure similar to that of some extragalactic nebulae. This structure was first shown by studying the positions of O and B stars; these stars trace out spiral arms. Radio astronomers subsequently found that interstellar hydrogen gas emits radio waves on 21 centimetres wavelength. Studies of this radio radiation has enabled the density and distribution of interstellar hydrogen to be determined. The hydrogen gas is found to be situated along the same spiral arms as the O and B stars. Indeed, there is a remarkably close correlation between O and B stars and interstellar matter.

Observations by both optical and radio methods have proved that the whole Galaxy is rotating about an axis through its centre perpendicular to the galactic plane. The period of rotation varies with distance from the centre, an average value being 200 million years. The total mass of the Galaxy is about 100 thousand million times the mass of the Sun.

STELLAR POPULATIONS

The two different types of colour-magnitude (or Hertzsprung-Russell) diagram mentioned above appear to apply not only to star clusters but to other objects in our Galaxy and in other galaxies. There seems little doubt that there are two fundamentally different types of stellar population: Population I has a colour-magnitude diagram similar to that of nearby stars and open clusters, Population II has a diagram similar to that for globular clusters. Population I includes both open clusters, longer-period Cepheid variables and supergiant stars, and is intimately associated with interstellar matter; it occurs prominently in the spiral structure of our Galaxy, and is generally concentrated towards the galactic plane. Population II includes the globular clusters, short-period Cepheids and other objects, tends to avoid the spiral structure of the Galaxy, has little or no interstellar dust associated with it, but may be associated with interstellar hydrogen gas, and is not concentrated towards the galactic plane. All the available evidence suggests that Population II stars are old objects, with ages averaging 5000 million years, while Population I stars are much younger, with ages in a few cases of only a few million years. Population II stars have lower content of metals relative to hydrogen than Population I stars.

EXTRAGALACTIC NEBULAE

Outside our own Galaxy there are large numbers of objects having a more or less hazy appearance on photographs. These are the extragalactic nebulae, also known as external galaxies. Some show a well-defined spiral structure, some are elliptical in form with no marked structural features, and some are irregular in form. The spiral nebulae consist of a

central bulge surrounded by spiral arms embedded in a disk-shaped structure. The elliptical nebulae and the central bulges of the spiral nebulae are believed to be composed of stars of Population II. The spiral arms are composed of Population I and some Population II, together with large quantities of gas and dust. The presence of dust is evident because of the dark patches of absorption which are a feature of the photographs of spiral nebulae; the presence of hydrogen gas has been proved by the observation of regions of glowing gas and by the reception of radio waves on 21 centimetres wavelength. In a few of the nearer galaxies individual stars have been observed, and comparison with stars in our own Galaxy provides estimates of the distances and sizes of the galaxies. Many of them are found to be comparable with our own Galaxy—with diameters of 100,000 light years and masses 100 thousand million times the Sun. The two Magellanic Clouds are the nearest galaxies to our own, their distances being about 140,000 light years. The best known external galaxy is the Great Nebula in Andromeda, at a distance of 2,000,000 light years; this spiral nebula is believed to be similar to our own Galaxy in size and stellar content. Extragalactic nebulae frequently occur in large clusters, each containing hundreds of nebulae. Many extragalactic nebulae are in rotation in a manner similar to our own Galaxy and with comparable periods.

RADIO SOURCES

In addition to the 21 centimetre hydrogen radiation received from interstellar gas, radio noise is received on other wavelengths. Some of this originates in well-known objects; one important

source of radio noise is the Crab Nebula, which is known to be the remains of the supernova of A.D. 1054. Some extragalactic nebulae are also sources of radio noise, but many of the apparently isolated sources, "radio stars", do not seem to coincide with any visible stars or nebulae. A few strong sources have been identified with peculiar extragalactic nebulae, and in other cases the source appears to be two colliding galaxies. There is a growing feeling that many of the radio stars may be very distant objects, perhaps even beyond the range of optical telescopes. The process by which the radio waves are generated has not yet been explained.

COSMOLOGY

The large scale problems of the Universe are concerned with the motions and distribution of the extragalactic nebulae through the observable region of space. It has been found that in spite of the tendency of galaxies to cluster together, on a still larger scale the galaxies are distributed remarkably uniformly. Observations have shown that distant galaxies have spectra showing "red-shifts", which have been interpreted as Doppler shifts due to velocities of recession; all the distant galaxies appear to be moving away from us with velocities proportional to their distance. This suggests that the whole Universe is in expansion. There are two rival theories of the cause of this expansion. One postulates a gigantic initial explosion some 5,000 million years ago. The other postulates a steady state, with continuous creation of matter producing new galaxies which eventually force the existing ones to continually increasing distances. Observations have not yet succeeded in distinguishing between these theories.

THE SOLAR SYSTEM

The Sun is one of the millions of stars that make up the Universe. The energy that it radiates in the form of light and heat is maintained by nuclear reactions among the atoms in its interior. It is surrounded by an immense number of comparatively cold planets and comets, together with smaller particles that give rise to meteors and the zodiacal light.

The planets are solid bodies revolving about the Sun in elliptical orbits with the Sun at one focus, and at distances related to the periodic times in accordance with Kepler's third law: the squares of the periodic times vary as the cubes of the semi-major axes. All revolve in the same direction, the orbits being only slightly inclined to the plane of the ecliptic in which the Earth moves round the Sun. As seen from the Earth, therefore, the planets are always near the ecliptic, moving in general from west to east round the sky. Once in every such revolution the planet appears to become stationary and then retrograde, forming a looped path which is a consequence of the Earth's own orbital movement.

The nine major planets, of which the earth is one, are of special interest, the five that are visible to the naked eye having been known from the earliest times. Six have satellites or moons revolving round them. These, like the planets themselves, are not self-luminous, but shine by the reflected light of the Sun. Notes on these bodies are given in the following pages. The thousands of minor planets that are also known, although of less interest to the observer, afford many problems to the mathematical astronomer. Comets are also members of the solar system; their orbits are inclined at all angles to the ecliptic, and are generally highly eccentric, reaching out to immense distances in space. The light of a comet is not due entirely to reflected sunlight, but partly to fluorescence caused by selective absorption of solar radiation. The return of a comet of short period may be predicted with some accuracy, but most comets appear quite unexpectedly. Meteoric dust appears to have a common origin with the comets, since some meteor showers have been shown to follow the orbits of certain comets.

THE SUN

The Sun is the ultimate source of most of the chemical energy available on the Earth. Hence the origin of that energy, which reaches the Earth in the form of light and heat from within the Sun, is of particular interest. The spectral distribution of the light from the Sun's surface indicates a temperature of about $5,700^{\circ}\text{C.}$, but a relatively short distance inside the surface the temperature reaches $1,000,000^{\circ}$ and deeper in the interior, near the centre, it is believed to be in the region of $14,000,000^{\circ}$. Now the constitution of the Sun is similar to that of the Earth, as is shown by similarities in the chemical spectra of solar and terrestrial sources; but at these high temperatures the atoms become stripped of their outer layers of electrons. In this highly "ionized" state the substance of the Sun acts in much the same way as a "perfect gas"

does on the Earth, even though the density is high. Furthermore, the thermal velocities are sufficiently great for nuclear collisions to take place. Nuclear energy can be released in the Sun by a variety of collision-processes, in each of which the light atoms of hydrogen, by far the most abundant element, are ultimately combined into the heavier atoms of helium. This energy, released almost entirely in the central regions, is transmitted by radiation and convection to the cooler outer layers of the Sun and thence to outer space, a very small proportion of it falling onto the Earth. It is possible to infer with some certainty, by considering the Sun as a typical star, that this process has been going on for about three thousand million years and that it may be expected to continue similarly for perhaps a further ten thousand million years.

As viewed in a low-power telescope provided with heavily absorbing filters, the Sun presents various features. Over most of its surface a fine mottling can be seen under good observing conditions. This "granulation" is visible evidence of a turbulent convective layer near the surface. Much more noticeable surface-markings called sunspots appear sporadically in the equatorial zones of the Sun and up to latitudes of 40° - 50° north and south. These sunspots, which are sometimes visible to the naked eye, provide direct evidence of the rotation of the Sun on an axis which is inclined about 7° to the line joining the poles of the ecliptic. They also indicate that the Sun does not rotate as a solid body but somewhat faster in equatorial regions than at higher latitudes. Its mean sidereal rotation-period is about 25 days but the motion of the Earth in its orbit around the Sun results in an apparent rotation-period, as viewed from the Earth, of approximately 27 days. Associated with sunspots are bright regions called faculae but these can not be seen when the spot is near the centre of the disk.

Sunspots vary in size from small dark specks, barely visible in a telescope, but actually with an area of about a million square miles, to large dark markings several thousand times as great. The largest spot ever measured (1947 April) covered 7,000 million square miles at its greatest, or approximately 0.7 per cent. of the Sun's visible surface. Correspondingly, sunspots have lifetimes ranging from a few hours in the case of some of the smallest, to many weeks in the case of the most persistent spots, which are often regular in shape but not as a rule particularly large. The frequency of spots varies in a definite eleven-year cycle, though the number of spots may vary considerably in a haphazard way from week to week in a particular year. One of the observed properties of spots during the 11-year cycle is that high latitudes, north and south, are predominant towards the beginning of a cycle, while later on there is a gradual drift of the most densely occupied zones towards the equator. In addition, a strong magnetic-field is found to be associated with sunspots, as well as certain systematic drifts in the solar layers there. These and other observed properties, such as concern the detailed structure and movements of spots.

must be explained by any comprehensive physical theory of sunspots. At present no generally accepted theory exists, though it seems clear that the magnetic field of the spot inhibits convection in the turbulent layers near the Sun's surface and so produces local cooling.

The Table below gives dates of recent maxima and minima of the sunspot cycles. It will be seen that the intervals between successive maxima (or minima) vary considerably from the average value of 11.1 years.

Maxima		Minima	
1837.2	1907.0	1833.9	1901.7
1848.1	1917.6	1843.5	1913.6
1860.1	1928.4	1856.0	1923.6
1870.6	1937.4	1867.2	1933.8
1883.9	1947.5	1878.9	1944.2
1894.1	1957.9	1889.6	1954.3

The last sunspot maximum was unusual in its absence of giant spots, the intense activity being due to a very large number of smaller spots; the previous maxima in 1937-38 and 1947-49 were also notable for great activity.

Other features of the Sun may be detected in light of wavelengths other than those of normal integrated visual light. With the light from the centre of strong spectral absorption lines such as H α , the C-line of hydrogen, or the H and K lines of calcium, bright regions can almost always be seen around sunspots and these regions occasionally become exceptionally bright for periods of an hour, or thereabouts. This is the phenomenon of the "solar flare", and its occurrence may be otherwise detected upon the Earth by immediate changes in propagation-conditions for long-distance radio-communication (changes in the ionosphere caused by a sudden increase in ionizing radiation) or, in the case of large flares, by the subsequent occurrence, a day or two later, of a magnetic storm. A very few large flares have had associated with them increases, occurring a few minutes later, of the high-energy cosmic-ray flux detected at the earth's surface.

Also visible in monochromatic wavelengths are the prominences, which extend outwards from the

Sun's surface into its tenuous outer regions, called the corona. At the limb prominences appear as bright forms, often arched or branching, while against the Sun's disk they appear as dark filaments. The corona itself can normally only be observed in its brightest regions by using light from certain bright spectral lines in special instruments at a high altitude on the Earth. At lower altitudes, and in the outer corona at high altitudes, scattered skylight is too great. However, when the Sun is obscured by the Moon at a total solar eclipse, the whole corona becomes easily seen. As well as the bright lines, it shows a weak continuous spectrum. It is also found that the corona has characteristically different appearances at sunspot maximum and sunspot minimum and that it frequently shows streamers extending outwards several million miles. When observed with radio wavelengths in the range 10 cm. to 5 m. the corona is normally detected, as well as short-lived emissions from disturbed regions around sunspots.

MERCURY

Mercury is the smallest planet and the nearest to the Sun. Because it moves in an orbit between the Sun and the Earth, it is never far west or east of the Sun. If east, it appears as an evening star; if west, as a morning star. The extremes of these apparent excursions are known as Greatest Elongations; their times and extent, measured by the angular distance from the Sun, are given on the first page of each month under the heading PHENOMENA. The great ellipticity of the orbit of Mercury causes the amount of these elongations to vary from 18° to 28°. The planet is best placed for naked-eye observation some days before eastern elongation on spring evenings, or after western elongation on autumn mornings, though in England at these times its actual distance from the Sun is near its minimum. In the southern hemisphere the conditions are, of course, reversed.

In a telescope, Mercury shows phases to the Earth like the Moon, resembling her at first quarter when at eastern elongation, and at last quarter when at western elongation. The planet is exceedingly difficult to observe telescopically and is best scruti-

ized with large apertures in full daylight. A recent map of the surface, made by Antoniadi, confirms in its essential features one made last century by Schiaparelli; these observers agree that Mercury always turns the same face to the Sun. The question of whether Mercury has an atmosphere cannot be regarded as settled.

VENUS

Venus, next from the Sun, has a diameter only two or three hundred miles less than that of the Earth. Its apparent movement with regard to the Sun is similar to that of Mercury, but, owing to the greater size of its orbit, its elongations extend as far as 47°. Venus is the brightest planet and is several times brighter than any star; it can often be seen in full daylight with the naked eye.

Apart from the beauty of its phases, Venus is a disappointing object in the telescope, its extensive atmosphere being so highly reflective, probably owing to cloud, that its true surface can never be observed. Vague dusky shadings may be seen or imagined, but conspicuous markings are both rare and evanescent.

Photographs of Venus in violet light were taken by Kuiper in 1950 and 1954 with the 82-inch reflector of the McDonald Observatory in Texas, and show that the surface of the planet is banded, three or more dark and bright bands being noted lying in a direction perpendicular to the terminator. These bands have been attributed to zones of ascending and descending currents in the atmosphere of Venus. Assuming that the bands are parallel to the equator, Kuiper deduced the position of the pole of Venus at 3^h 32^m, +81°, which is in Cepheus. The equator of Venus is therefore tilted at an angle of about 32° to its orbit. Further observations will be required to deduce the period of rotation of the planet, but it is considered that this cannot exceed a few weeks.

The spectrum of the atmosphere above the reflecting layer reveals a considerable amount of

carbon dioxide, but no oxygen; such might also be the conditions on the Earth, were it not for the constant absorption of carbon dioxide by vegetation and its replacement by oxygen. A remarkable feature of the upper atmosphere is the absence of all trace of water vapour.

MARS

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury. Oppositions occur at intervals of about 2 years 2 months, but owing to the eccentricity of the orbit the opposition distance varies between 35 and 63 million miles. The most favourable approaches unfortunately take place when the planet is low in the sky for northern observers; but when, as in 1956, one occurs in the early autumn, the distance may be less than 40 million miles and the planet just north of the equator. It is only within two or three months of opposition that Mars is near enough for its surface to be successfully studied with a telescope; even at these times only the coarser details are likely to be recognized with instruments of less than 6 inches aperture.

Except for Mercury, Mars is the only planet whose true surface we are able to see. This exhibits many well-defined markings, most of which are permanent, and from these the rotation period has been well determined; it is about 47½ minutes longer than that of the Earth. The axis of rotation is inclined at about 24° to the plane of the orbit. There are white spots at the poles which are deposited during the winter of each hemisphere and melt or evaporate during the summer. It is most probable that these consist of thick deposits of hoar frost, and the infra-red absorption spectra of the polar caps support this view. The major portion of the surface is of a featureless orange hue, which gives rise to the ruddy appearance of Mars. But there abound large areas, often with sharp boundaries, of a blue-grey colour. The latter were once thought to be seas; but it is now known that

there are no large sheets of open water, and some regard areas of vegetation as their most likely interpretation, especially as they undergo change of tint. It has been claimed that these changes follow the Martian seasons; but as 15 or 17 years must elapse between the times when we can study Mars under similar conditions, it cannot yet be confirmed that there are any changes of a truly seasonal character apart from the waxing and waning of the polar caps.

The question of the so-called Martian "canals" is very controversial. Most skilled observers would probably deny the very existence of these excessively thin linear markings, attributing them to optical or physiological effects. To speculate on their being the work of intelligent beings is therefore, to say the least, premature.

Mars has an atmosphere believed to be considerably less dense than our own. The spectroscope has been unable to establish that it contains either oxygen or water vapour, which can therefore be present only in minute proportions. Recently, however, about the same amount of carbon dioxide has been detected as is found in our own atmosphere.

Mars has two faint satellites, Phobos and Deimos, which were discovered by Asaph Hall in 1877.

THE MINOR PLANETS

Moving in orbits which in general lie between those of Mars and Jupiter, are a large number of small bodies called minor planets or asteroids. It is estimated that at least 50,000 come within reach of present instruments. Scores of them are now found every year by photographing the sky. Their orbits are calculated as observations accrue, and when the results are reliable enough the new planets are given permanent numbers, and usually also names, by a central authority—now at the Cincinnati Observatory, U.S.A. At present there are over 1600 on the permanent list, and several dozen are likely to be added each year; and always there are many still under investigation. All are faint—none have ever been seen by an unaided eye except, just possibly, Vesta.

These celestial bodies are probably little more than masses of rock revolving round the Sun. The first four, found early in the 19th century, are also the largest: Ceres, 420 miles in diameter, Pallas 280, Juno 150, and Vesta 240 miles.

The periodic times of the revolutions about the Sun vary considerably around an average of 4½ years, but interesting groups and gaps occur among the values for these times owing to disturbances of the orbits caused by the attraction on these bodies of the massive planet Jupiter. Although some of the orbits are nearly circular, others are very elongated ovals (ellipses); and though the inclinations of their planes to the ecliptic are mostly less than 20°, several exceed 30°, including Pallas 35°. The highest known, 43°, is that of Hidalgo. This planet has also the longest period, 14 years, and travels out as far as Saturn's orbit. On the other hand Icarus, discovered in 1949, comes within the orbit of Mercury, and three others Apollo, Adonis and Hermes, within that of Venus. Another, Eros, is of importance because in some circumstances it can be within 13 or 14 million miles of the Earth. This happened in 1931 when carefully planned photo-

graphic recording of the planet and the surrounding stars enabled measures of its distance to be made, and hence a new value of the distance of the Sun from the Earth (the solar parallax) to be deduced.

Similarly, certain other minor planets with suitable orbits can be used for special purposes, as in the precise measurement of the equinox and equator, or in finding the masses of Mercury or Venus.

JUPITER

Jupiter, the largest planet, has a volume over 1000 times that of the Earth, but a density only one-quarter of ours. Its oblate shape is so marked, owing to its great size and rapid rotation, as to be obvious in quite small telescopes.

The characteristic surface features of Jupiter are bright zones separated by dusky belts, running practically parallel to the planet's equator. With telescopes of moderate size some of these may be resolved into finer detail, consisting of spots, wisps, streaks, etc., but the general banded appearance still remains. When the period of rotation is determined by timing objects such as these as they cross the planet's central meridian, it is found that spots within about 10° of the equator indicate a period of approximately 9^h 50^m, while most of those in higher latitudes give periods between 5^h 55^m and 9^h 56^m, the transition from the shorter to the longer being usually quite abrupt. When the rotation periods are examined in greater detail, it is found that the surface may be divided into many zones, each having a particular period characteristic of its latitude, but that the distribution in latitude of the various periods is quite haphazard. This differs from the Sun, whose rotation is also fastest at the equator, for whereas a definite formula connects the periods of solar spots with their latitude, no such law can be found for Jupiter. Actually the fastest moving spots are confined to a narrow strip in latitude about +25°; the last outbreak of such spots occurred in 1939.

Few Jovian markings have any degree of permanence, having generally lost their individuality after a few months. Two objects, however, form notable exceptions. The well-known "Bay" or "Hollow" in the South Equatorial Belt, which is so closely associated with the Great Red Spot, made famous in 1878-80 by its darkness and colour, is known to have existed from 1831 and the Red Spot itself may be identical with a similar object first depicted in the 17th century and followed for many years. The physical nature of the Red Spot is a mystery; its long duration suggests some connection with the solid surface, but the non-uniformity of its period of rotation seems to rule out this explanation. The other feature displaying considerable permanence is known as the South Tropical Disturbance, which has the same latitude as the Red Spot. Its rotation period is somewhat shorter than that of the latter; since its first detection in 1901 it has overtaken and passed the Red Spot eight times.

The spectroscope shows that Jupiter's atmosphere contains ammonia and considerable quantities of methane (marsh gas). The main constituents are unknown, but it is probable that hydrogen and helium abound and that the light clouds of the

surface arc due to minute droplets or crystals of ammonia, the surface temperature having been found by measurement to be of the order -120°C. , which is not far from the calculated value. It has been suggested that this atmosphere is very deep; but if so, the pressure at depths below 50 miles or so must be such as to give it the properties of a liquid rather than a gas. A recent theory is that it may be dense enough to support in flotation a light solid body at some depth below the surface, and that what we see as the Red Spot may be a manifestation in the atmosphere above it of thermal changes in such a solid.

Jupiter has four principal satellites—the first celestial objects discovered by telescope by Galileo. The two inner major satellites are about the size of our Moon, while the two outer are about as large as Mercury. A fifth, very much smaller and fainter and nearer to Jupiter, was discovered visually by Barnard in 1892; this satellite has the most rapid motion of any in the solar system. Seven other satellites have been discovered photographically but all are minute objects; the four outermost of these have retrograde motion and are so greatly disturbed by the solar attractions that their orbits are not even approximately elliptical.

Intense but irregular bursts of radio noise were detected at the Carnegie Institute at Washington in January 1955, on wavelengths of 13.5 and 20 metres; these signals were received only during the few minutes while Jupiter was crossing the aerial beam. Similar evidence has been obtained from other quarters, and an investigation is now being made to discover possible correlations between these radio outbursts and the times at which visible markings on the belts of Jupiter transit across the centre of the disk.

SATURN

This planet is unique because of its encircling ring system, which makes it a very beautiful object in even a small telescope. There are two bright rings and an inner dusky one, which is transparent enough for the body of the planet to be seen through it. The dark line separating the two outer rings is known as Cassini's division in honour of its discoverer. The rings lie almost exactly in one plane, which is inclined at 27° to the planet's orbit and is sensibly that of its equator. It has been proved theoretically that the rings consist of a vast swarm of small individual particles, each pursuing its own orbit like a satellite around Saturn; this has been confirmed observationally by the spectroscope. This makes even more remarkable the extreme thinness of the rings, which is illustrated every 15 years, when the plane of the rings passes through the Earth; they then become invisible even in the greatest telescopes. Thus they cannot present when edgewise a width of more than a very few miles.

From the few spots that have been observed on Saturn's surface, the rotation period at the equator is about $10^{\text{h}} 15^{\text{m}}$, in higher latitudes $10^{\text{h}} 38^{\text{m}}$ has been found in the northern hemisphere and $10^{\text{h}} 37^{\text{m}}$ in the southern. There is thus some analogy with Jupiter, but we are ignorant of the behaviour of intermediate zones.

The density of Saturn is less than three-quarters

that of water; the oblateness is even more marked than is Jupiter's, the equatorial diameter exceeding the polar by about one part in nine. The general appearance of the disk is banded, but the dusky belts are fewer and wider than those on Jupiter and present less contrast with the brighter zones. The atmosphere is known to contain methane and ammonia.

Among the more interesting results obtained from measurements of infra-red absorption spectra with the 82-inch reflector of the McDonald Observatory in Texas are those of the constitution of Saturn's rings and the five inner satellites. The only substance which gives similar absorption bands to those observed would appear to be frost deposited on a material at very low temperatures. The absorption curve is quite characteristic, and seems to be governed by the size of the frost crystals. Similar curves are given by the polar caps of Mars, but not by snow or ice. Estimates of the masses of Saturn's rings and of the five inner satellites show that their densities cannot be far from unity, and it is provisionally suggested that they are all composed of ice. Evaporation will be negligible at the low temperatures prevailing, and the small particles of which the ring is composed will suffer little or no loss.

Saturn has nine satellites, of which the largest, Titan, is easily seen with a small telescope. Titan is the largest satellite in the solar system, and the only one which shows definite evidence of possessing an atmosphere. The seven innermost satellites revolve nearly in the plane of the rings. When the rings are seen edgewise, these inner satellites may transit the planet or be eclipsed in the same manner as those of Jupiter. The faint outermost satellite, Phœbe, has a retrograde motion.

URANUS

This planet was discovered by William Herschel at Bath in 1781, and so has completed only two revolutions since its discovery. It is only just visible to the naked eye, but in a telescope is distinguishable by its disk, which is quite obvious, though less than $4''$ in diameter, and by the different quality of its light. The two outer and brighter of its four main satellites were found by Herschel in 1787; the two inner by Lassell in 1851. Their movement is retrograde in a plane inclined 82° to the plane of the ecliptic. A fifth satellite was discovered by Kulper in 1948. The period of rotation of Uranus has been determined spectroscopically to be $10\frac{1}{2}$ hours; the direction is the same as that of the satellites.

NEPTUNE

This planet is a telescopic object of about the 8th magnitude, presenting a disk of well over $2''$ in diameter. A rotation period of $15\frac{1}{2}$ hours, inferred spectroscopically, is now generally adopted for the planet.

The planet was found in 1846 as a result of calculations, made independently by J. C. Adams and Le Verrier, which gave the position of an unknown planet which was responsible for perturbations of the motion of Uranus. The planet was found near the indicated place by Galle of the Berlin Observatory. Neptune has two satellites, of which the inner, Triton, was discovered by Lassell soon after

the discovery of the planet. Triton revolves about Neptune in a retrograde direction at a distance a little less than that of the Moon from the Earth.

The other satellite, found by Kuiper in 1949, revolves in the normal direction in a period of about a year. Its orbit is remarkably eccentric, and the satellite's distance from Neptune varies from 800,000 to over 6 million miles.

PLUTO

The outermost planet of the solar system was discovered photographically at the Lowell Observatory in March 1930, as a result of a systematic search for a trans-Neptunian planet. The existence of such a planet had been suggested many years before, and although the predicted elements of the orbit differ in some respects from the true facts, yet these predictions were undoubtedly responsible for the ultimate discovery. The planet was called Pluto, and would appear to be small, with a mass possibly much less than that of the Earth. It would also appear to be a poor reflector of the Sun's light, since it shines only as a star of the 14th-15th magnitude.

THE MOON

The Moon is the Earth's satellite, and although its motion is highly complicated, it may be considered to revolve about the Earth in an elliptical orbit inclined about 5° to the plane of the ecliptic. Owing to perturbations, the ellipse is continually varying in shape, and the whole orbit twists round in space so that the nodes, or points where the orbit intersects the ecliptic, move in a retrograde direction, making one complete revolution in 18.6 years.

The Moon, whose diameter is 2160 miles, rotates in the same time that it revolves ($27^d 7^h 43^m$) so that the same face is always presented to the Earth. The tilt of its axis, and the variable speed in the orbit, cause it to undergo an apparent swaying motion called libration, which enables us, in the long run, to see rather more than an exact half of the lunar surface. In a telescope this surface shows many objects of great beauty and interest, the rugged ranges of mountains, the craters and plains forming an impressive picture of jet-black shadows and bright highlights.

The revolution of the Moon about the Earth with reference to the Sun takes rather longer than a sidereal revolution, so that the phases of the Moon repeat themselves in a period that varies slightly about a mean of $29\frac{1}{2}$ days. Each month the Moon passes in front of all stars in its path. Such an *occultation* causes the light of the star to be extinguished instantly. This, together with the sharpness and intensity of the shadows on the Moon, indicates a complete lack of atmosphere. Eclipses occur at two "seasons" of the year, when the Moon is near one of its nodes and in line with the Earth and the Sun. A lunar eclipse takes place when the Full Moon passes through the Earth's shadow, and is visible over half the Earth at any one time. A solar eclipse takes place when the New Moon passes in front of the Sun, and is visible only from a rather small area of the Earth.

As a result of its eastward movement among the stars, the Moon rises later each day by a variable amount that depends on the inclination of its

apparent path to the observer's horizon. When this angle is small, the Moon rises at much the same time for several days in succession. Although this occurs each month, it is most noticeable in high latitudes at the Full Moon nearest to the Autumnal Equinox. This is the Harvest Moon, although in this Almanack the name is always given to the Full Moon of September. The next Full Moon is called the Hunters' Moon.

THE AURORA BOREALIS (AND AUSTRALIS)

An aurora is the visible counterpart of a marked disturbance of the Earth's magnetic field (a "magnetic storm") apparently due to the action of a stream of electrified particles shot earthwards from localized regions of the Sun, such as that of a big sunspot. The glow of auroral patches, arches or streamers results from the action of this solar stream upon the constituent gases of the Earth's upper atmosphere. The usual height of the lower limit of the auroral luminescence is about 60 miles; upwards, it may extend to 300 miles or higher. Aurorae are very frequent in the so-called auroral zones (magnetic latitude about 67°); they are most frequent for the Earth as a whole near sunspot maximum. Although the solar origin of great displays (e.g. 1938 January 25 and 1949 January 24-26) can be traced to particular sunspots with solar flares, many lesser auroral displays cannot be thus associated. However, their solar origin is evidenced by their tendency to recur at intervals of 27 days, the time required for the Sun to turn once on its axis with respect to the Earth.

THE ZODIACAL LIGHT

This faint phenomenon of the late evening or early morning sky can be seen only when the air is sufficiently clear, the sky quite dark, and the ecliptic making a fairly steep angle with the horizon. It then appears as a cone of faint light stretching up from the position of the Sun (below the horizon) in the direction of the ecliptic, with its apex anything from 60° to 110° from the Sun. In our latitudes it is best seen after sunset in spring and before sunrise in the autumn, when it may appear brighter than the Galaxy in its brightest area.

Occasionally, under very good conditions, an extension of the Cone may be traced right round the ecliptic. This is known as the Zodiacal Band. The *Gegenschein* or "Counter-glow" may also be detected as a widening of the band at the anti-solar point.

Recent work shows that the zodiacal cloud is a continuation of the Sun's corona, and that much of this fine dust must fall on the earth every day. The particles are much too small, however, to become visible (by incandescence) as they fall through the atmosphere, and there is evidence to show that they settle in the form of micrometeorites. These probably act as centres of condensation in the formation of rain.

METEORS

The scattered particles which move in streams about the Sun give rise to occasional showers of meteors ("shooting-stars") or fireballs—bodies that differ only in size. They are visible in varying numbers every night, being sometimes so abundant

as to be quite spectacular. Often on a particular date or dates, meteors radiate from the same part of the heavens every year. This is because a stream of particles more or less dense, is moving in an orbit that intersects that of the Earth. The orbits of some of these streams, Lyrids, Pons-Winneckeids, Perseids, Giacobinids, Leonids, are known to be closely similar to those of certain comets, but modern work on the measurement of meteor velocities by photographic and radar methods has given very different results for the other streams. Thus the Geminids and the November Taurids have been shown by Whipple (from photographic results) to have small but eccentric orbits, more like those of minor planets. The radar methods of studying meteors have the advantage of being equally useful in daylight, and unaffected by cloud. Besides making measurements of the major showers noted above, the radar technique has shown the presence of a number of extensive showers in daylight hours, particularly in the summer months. These also show the same type of small eccentric orbit as those determined by Whipple.

* Not plentiful each year.

The real paths of a great number of meteors have been computed, and the average heights found to be about 70 miles at the beginning and about 48 miles at the end. The speeds vary from 20 to 45 miles per second. Fireballs, or very bright meteors, appear at all times of the year unexpectedly so that they are often imperfectly noted and computation of their flight is not practicable.

Fireballs would seem to have a different origin from the ordinary shooting star, and probably arise from the belt of minor planets. The largest fireballs, when not completely consumed, land on the earth as meteorites. The largest meteorite found weighs 30 tons, and considerable collections are to be seen in our museums. Very large falls were recorded in Siberia in 1908 and 1947, while craters (formed presumably by large meteorites) are found in Arizona, Ungava and elsewhere. At the other end of the scale are the micro-meteorites which are too small to become incandescent in the atmosphere and which drift slowly down to the earth's surface.

Above is a list of the nights when meteor showers

may be expected, with the radiant points from which the meteors diverge. The dates given are those when the meteors are likely to be most abundant. In some cases, e.g. the Perseids, the apparition lasts beyond these limiting dates, and the position of the radiant, which changes from night to night, is given for the date of maximum.

COMETS

A comet is distinguished from other bodies in the solar system by its appearance: a hazy luminous patch moving in the sky, more or less round and usually brighter in the centre, sometimes with a star-like nucleus there; and from it not infrequently extends a tail which may, in bright comets, reach a length of as much as 100 million miles—a fine spectacle. Most comets are found accidentally and few observers search for these objects. One of the few is G. E. D. Alcock of Peterborough, Northants, who, after searching unsuccessfully for six years, found two new comets in August, 1959, within the space of 5 days. There have been unusually few bright ones for nearly half a century, and the two naked-eye comets which appeared in 1957 (Comet Arend-Roland in April, and Comet Mrkos in August) therefore aroused considerable interest.

Although generally large in volume, a comet is small in mass, probably less than one-millionth that of the Earth even in the largest comets—the centre being composed mainly of an aggregation of pieces of matter mostly of sizes between that of pebbles and fine dust, but probably containing also a solid core a few miles in diameter. According to a recent theory, the earthy material is held together by various "ices"—masses of frozen gases such as ammonia, carbon dioxide and methane—which, on approaching the Sun, begin to evaporate. The pressure of the Sun's radiation is great enough to repel these gases, together with fine dust, and thus form a tail. As the comet approaches the Sun, it grows brighter and as it recedes it grows fainter again, the tail now preceding it in its journey away from the Sun.

Most comets follow paths which are very elongated ovals (ellipses) and return to the Sun, if at all, only after hundreds or thousands of years. The arrival of such comets cannot therefore be predicted. A few dozen comets, however, mostly too faint ever to be seen with the unaided eye, move in smaller ellipses which are sufficiently accurately known to enable predictions to be made of their returns. The most famous and brightest of these periodic comets is Halley's comet, whose spectacular appearances about every 75 years have been traced back over more than 2000 years—it is next due early in 1986. Two very faint comets are known which travel in nearly circular orbits and, on this account, come within reach for photographic observation every year: Schwassmann-Wachmann (1), designated 1925 II, and Oterma. The former is of special interest, not only because its orbit is the only known one lying wholly between Jupiter and Saturn, but on account of the unexpected outbursts in brightness it occasionally manifests.

THE EARTH

The shape of the Earth is that of an oblate spheroid or solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles are circles. The length of the equatorial axis is about 7927 miles, and that of the polar axis 7900 miles. The mean density of the Earth is 5.5 times that of water, although that of the surface layer is less. The Earth and Moon revolve about their common centre of gravity in a lunar month; this centre in turn revolves round the Sun in a plane known as the ecliptic, that passes through the Sun's centre. The Earth's equator is inclined to this plane at an angle of $23\frac{1}{2}^{\circ}$. This tilt is the cause of the seasons. In mid-latitudes, and when the Sun is high above the Equator, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface; these effects combine to produce summer. In equatorial regions the noon altitude is large throughout the year, and there is little variation in the length of the day. In higher latitudes the noon altitude is lower, and the days in summer are appreciably longer than those in winter.

The average velocity of the Earth in its orbit is $18\frac{1}{2}$ miles a second. It makes a complete rotation on its axis in about $23^{\text{h}} 56^{\text{m}}$ of mean time, which is the sidereal day. Because of its annual revolution round the Sun, the rotation with respect to the Sun, or the solar day, is more than this by about four minutes (see p. 140). The extremity of the axis of rotation, or the North Pole of the Earth, is not rigidly fixed, but wanders over an area roughly 60 feet in diameter.

THE TIDES

The tides are caused by the attraction of the Moon for the waters of the Earth, while a similar but smaller effect is due to the Sun. Normally there are two high tides every day, about $12\frac{1}{2}$ hours apart. They thus occur about 50 minutes later than those of the previous day, corresponding to the $24^{\text{h}} 50^{\text{m}}$ interval between consecutive meridian passages of the Moon. The height of the tide varies considerably. The highest, called Spring Tides, always occur about the time of New or Full Moon, when the lunar and solar attractions act together. At Neap Tides, which occur about First and Last Quarter, the rise and fall is only about half as much as at Spring Tide.

The tidal flow of water across the Earth is greatly modified by the shape of the coastlines and other geographical conditions. The complicated motion of the Moon, its changing position north or south of the equator, and its varying distance from the Earth, all add small variations; it is thus impossible to predict tides theoretically. Tide-tables for any place are always constructed from an analysis of past observations of times and heights. It is found that the height can be expressed as the sum of a series of periodic terms, which can be carried forward.

High water does not necessarily occur at the same time as the meridian passage of the Moon, nor do

springs and neaps necessarily occur on the same day as the phases stated. Thus at London Bridge the tide is high when the Moon is somewhat west of the meridian, while Spring Tides occur about $2\frac{1}{2}$ days after New or Full Moon.

The shape and depth of a channel or estuary very greatly modify the nature of the tides. At some places one of the daily tides becomes so small as to be negligible, while in other channels (e.g. Southampton Water) the high tides are doubled. The difference between high and low water, or range of the tide, may vary from a small amount, as in the land-locked Mediterranean, up to 40 feet in the Severn Estuary and 50 feet in the Bay of Fundy.

As the energy involved in this tidal flow is considerable, various schemes for harnessing tidal energy have been evolved. As a consequence of the friction caused by tidal flow, the Earth's period of rotation is increasing by about a thousandth of a second per day every century. Although very small at present, this effect was greater in the past, and has played a considerable part in the history of the Earth-Moon system.

TERRESTRIAL MAGNETISM

In the earliest years of experimental science it was known that a light bar of iron rubbed with a piece of the commonly occurring iron ore, magnetite or lodestone, was subject to a directing force impelling it to take up a constant direction when freed from other restraint. Before the 12th century, voyagers were using this mysterious property to guide themselves, their method being to place a light magnetized needle on a reed floated on water. From this primitive device the Mariner's compass subsequently developed. The direction, though roughly north to south, was by no means accurately so. It was found by Columbus on his voyage across the Atlantic that whereas the needle pointed east of north at the outset, it pointed north-west at the end.

William Gilbert, physician to Queen Elizabeth I, gave the first approximately correct explanation of the then known facts. Magnetized needles behave as if in proximity to a large magnetized sphere, which he conceived to be the Earth itself.

It was soon found that the direction of the force in a particular locality slowly changed. Henry Gellibrand, observing near Greenwich in 1634, found the direction to be about 4° east of north, whereas there was undoubted evidence that in 1580 it had been about 11° east in the same neighbourhood. In 1722, Graham, the clockmaker, found that the direction oscillates slowly through a small angle every day. The movement is eastwards till about 8 a.m., then rather quickly westwards till about 2 p.m., after which there is a gradual return

eastwards. The amplitude may be as much as 15' in the summer.

The compass needle points along a magnetic line of force passing through the "magnetic poles." At these poles a freely suspended magnetized needle would be directed into the vertical. Recent investigations by Canadian surveying parties indicate a position for the North magnetic pole of approximately 75° N. 101° W., but the lines of force do not converge radially upon this point tending rather, on the north side, to concentrate into a channel. From observations by members of Mawson's Australian Antarctic Expedition in 1912 the inferred position of the South magnetic pole was approximately 71° S. 151° E. Results obtained during a French Antarctic Expedition in 1951-2 suggest a position for the South magnetic pole of 67° S. 142° E. The two magnetic poles are thus not antipodal, the line joining them passing the centre of the Earth at a distance of about 700 miles. The distances of the magnetic poles from the north and south geographical poles appear now to be about 1,000 and 1,600 miles respectively.

There is also a "magnetic equator", at all points of which the vertical force is nil and a magnetized needle remains horizontal on its axis. This line runs between 5° and 10° north of the geographical equator in the eastern hemisphere, turns sharply south off the West African coast, and crosses South America through Brazil, Bolivia and Peru; it recrosses the geographical equator in mid-Pacific.

Reference has already been made to secular changes in the Earth's field. The following table indicates the changes in magnetic declination (or variation of the compass). Similar, though much smaller, changes have occurred in "dip" or magnetic inclination. Combination of the two phenomena suggests that a whole cycle may perhaps occupy several hundred years; it is uncertain whether an exact repetition would then follow.

London		Greenwich	
1580	11° 15' E.	1820	24° 21' W.
1622	6 00 E.	1840	23 20 W.
1657	0 00	1860	21 14 W.
1692	6 00 W.	1880	18 33 W.
1723	14 17 W.	1900	16 29 W.
1773	21 09 W.	1920	14 09 W.
1805	24 08 W.	1925	13 10 W.

In order that up-to-date information on the variation of the compass may be available, many governments publish magnetic charts on which there are lines (called isogonals) passing through all places at which specified values of declination will be found at the date of the chart.

In the British Isles, isogonal lines now run from north-east to south-west, making an angle of about 20° with the meridians. Though there are considerable local deviations due to mineralogical causes, a rough value of magnetic declination may be obtained by assuming that at 50° N. on the meridian of Greenwich, the value in 1963 is 7° 22' west and allowing an increase of 13' for each degree of latitude northwards and one of 30' for each degree of longitude westwards. For example, at 53° N., 5° W., declination will be about 7° 22'

+31' +150', i.e. 10° 31' west. The average annual change at the present time is about 6' decrease.

The number of magnetic observatories now approaches 200—widely scattered over the globe. In Great Britain three are maintained by the Government, namely at Hartland, North Devon, at Eskdalemuir in Dumfriesshire, Scotland, and at Lerwick, Shetland Islands, while a fourth is maintained by Stonyhurst College, Lancashire. The new Hartland Observatory (a department of the Royal Greenwich Observatory) came into operation in 1957 to take the place of the magnetic observatory at Abinger, Surrey, which ceased to operate later in the year. The mean values of the magnetic elements at Abinger are given below.

The phenomena of terrestrial magnetism are due primarily to a field of magnetic force emanating from within the Earth, the origin and behaviour of which is still not satisfactorily explained, and secondarily to magnetic fields imposed from without by the flow of streams of ions or electric currents in the higher regions of the atmosphere. It is undoubted that the latter effects are closely associated with the position of the Sun and with the state of activity of that body, for the diurnal oscillation of the needle everywhere follows local time, and is also more than twice as great in summer as in winter in temperate latitudes. Again, it is considerably larger during years of increased solar activity (as indicated by the occurrence of many sunspots) than in the quiet years.

Year	Declination West	Dip or Inclination	Horizontal Force †	Vertical Force ‡

Magnetic Storms. Occasionally—sometimes with great suddenness—the Earth's field is subject for several hours to marked disturbance, indicated by continuous irregular movements of the recording magnets and accompanied in many instances by a widespread display of aurora. In severe magnetic storms, induced earth-currents also develop which seriously interfere with telegraphic communication. The disturbances are generally ascribed to the passage of the Earth through vast streams of ions or electrified particles that have been expelled from the Sun during an explosive outburst at the solar surface. Such eruptions can be seen and photographed. Often a conspicuous spot has been apparent near the centre of the Sun's disk a day or two before; but the appearance of a spot is by no means always followed by the occurrence of a magnetic storm. There is a tendency for disturbances to recur after intervals of 27 or 28 days, corresponding closely to the apparent period of rotation of the Sun on its axis; this would be explained if the source of the disturbance were located on a particular area of the Sun's surface.

ARTIFICIAL SATELLITES AND SPACE PROBES

The progress of rocket research during the last war led to the development by the Germans in 1944 of the V.2 rocket which, if fired vertically, attained a height of 110 miles. Before the end of the decade the U.S. rocket engineers had increased this maximum height to 250 miles by using a two-stage rocket, the first stage being a V.2 and the second a WAC Corporal. Plans for using multi-stage rockets to put artificial satellites into orbit around the earth during the International Geophysical Year (July 1957–December 1958) were announced by both the U.S. and the U.S.S.R. Such projects also called for an immense effort in establishing optical, radio, and radar tracking facilities around the world.

The historic event which heralded the Space Age occurred on October 4, 1957, when the U.S.S.R. successfully injected a "sputnik" into an orbit inclined at 65° to the earth's equator. One month later "Sputnik 2" was also put into orbit, carrying a dog that survived the ascent trajectory and lived for several days orbiting the earth. The rate of satellite launching has increased since 1957 and by the end of 1960 the number of artificial satellites in orbit around the Earth exceeded the number of natural satellites known to be in the Solar System. All the satellites launched up to the end of 1960 have been sent up in the same direction as the rotation of the Earth, *i.e.*, eastwards. Thus they are able to start with the benefit of the Earth's rotational velocity at the particular launching site. This is why these satellites always appear to move in an easterly direction. However, the first satellite launching of 1961 (*Samos 2*) achieved a retrograde orbit.

Satellite Orbits

To consider the orbit of an artificial satellite it is best to imagine that one is looking at the Earth from a distant point in space. The Earth would then be seen to be rotating about its axis inside the orbit described by the rapidly revolving satellite. The inclination of a satellite orbit to the Earth's equator (which generally remains almost constant throughout the satellite's lifetime) gives at once the maximum range of latitudes over which the satellite passes. Thus a satellite whose orbit has an inclination of 53° will pass overhead all latitudes between 53° S. and 53° N., but would never be seen in the zenith of any place nearer the poles than these latitudes. If we consider a particular place on the earth, whose latitude is less than the inclination of the satellite's orbit then the Earth's rotation carries this place under first the northbound part of the orbit and then, later on, under the southbound portion of the orbit, these two occurrences being always less than 12 hours apart for satellites moving in direct orbits (*i.e.* to the east). For satellites in retrograde orbits the words "northbound" and "southbound" should be interchanged in the preceding statement. As the value of the latitude of the observer increases and approaches the value of the inclination of the orbit, so this interval gets shorter until (when the latitude

is equal to the inclination) only one overhead passage occurs each day.

Orbital Variations

The relatively simple picture described above is unfortunately complicated by the considerable variations in the shape, orientation and size of the orbit during a satellite's lifetime. The major variations are due to the Earth's oblateness and to air-drag. A third cause, radiation pressure from the Sun, is noticeable only on large satellites of extremely low density.

The oblate shape of the Earth—the equatorial diameter is 27 miles longer than the polar diameter—has two marked effects on a satellite orbit. It causes a regression of the nodes, amounting to several degrees a day for close satellites. Thus from a point in space, the whole orbit is seen to twist around the Earth, making a complete turn of 360° within a few months. This regression, which may also be described as the rotation of the orbital plane around the Earth's axis, is in the opposite direction to the satellite's motion, *i.e.* the orbit of a satellite with a direct motion regresses to the west. The actual amount of the regression depends, first, on the inclination of the orbit to the equator, being greatest at low inclinations and zero for a true polar orbit (inclination 90°). It is also dependent on the distance of the satellite from the Earth, being greatest for small orbits. At the distance of the Moon the regression is only 19° a year.

The orbit of *Samos 2* is extremely interesting from this point of view as its regression is to the east at almost an identical rate with the movement of the Sun. Thus there is hardly any change in the area of visibility over a long period of time.

The other effect the Earth's oblateness has on a satellite orbit is to cause a rotation of the line of apsides (*i.e.* the line joining the perigee and apogee points of the orbit). The rate of the rotation is dependent on the inclination of the orbit, and also on the distance of the satellite, again being greater for close satellites than for more distant ones. The value of this rotation has its greatest positive value (*i.e.* it moves forward along the orbit in the same direction as the satellite) at the equator and becomes zero at an inclination of $63^\circ.4$. As the inclination moves from $63^\circ.4$ to 90° the value increases again numerically, but with the opposite sign, the motion of the line of apsides being backwards along the orbit.

Even at heights of several hundred miles there is still sufficient atmosphere to cause a retarding effect on satellites. Although air-drag will have most effect around the perigee point the actual result is to reduce the height of the apogee point with hardly any change in perigee height and thus to decrease the eccentricity of the orbit until, in the final stage of a satellite's life-time, the orbit is almost circular. Unfortunately the air density at perigee height is not constant. It alters as the perigee moves from daylight into darkness and from darkness into daylight, and also as the latitude of perigee changes

Period		Height, miles	Velocity, miles per hour	Period	Height, miles	Velocity, miles per hour

3	30	3,313	13,055				

due to the rotation of the line of apsides. There is already some evidence that the atmospheric density varies with the sunspot cycle. In addition unpredictable short-period variations in the output of solar radiation may also occur and these have the effect of increasing the air density at any given height. Thus the air-drag on a satellite is by no means a constant factor and this is the reason why it is not possible to forecast accurately the position of a satellite for any considerable period of time. There is also some retardation due to electrified particles but this effect may be included with the air-drag.

Radiation pressure from the Sun only has any appreciable effect on large satellites of extremely low density such as the 100-ft. diameter balloon, *Echo 1*. For such satellites, however, this effect can be severe, and for heights greater than a few hundred miles, it can equal or even surpass that due to air drag. The effect on the orbit is very much more complicated than that due to air-drag, and even the signs of the variations can change periodically with time. Thus it is possible for the eccentricity to increase rather than decrease, with an increase in apogee height and a decrease in perigee height.

For close artificial satellites the gravitational attractions of the Sun and Moon are many thousand times weaker than that of the Earth's equatorial bulge and need only be considered in an extremely precise analysis of observational material.

Height and Velocity

The mean height of a satellite above the Earth's surface, which is determined by its orbital velocity, is related to its period of revolution around the Earth as is shown by the table above. This table is only strictly valid for circular orbits.

F+

As the orbit shrinks due to air drag, both the mean height and the period decrease so that the retarding effect of air drag actually causes the satellite to move faster, though in a smaller orbit.

Satellite Launchings, 1957-62

Many different types of orbit have been achieved though the vast majority have had a direct motion. The majority of the Russian satellite orbits have had inclinations of 65° and orbits entirely below 1200 miles height. An important exception was Lunik 3 whose original inclination was 75° and initial apogee height 293,000 miles. This satellite orbited the Moon on its first revolution, returning with the first photographs of the other side of the Moon, which were transmitted back to the Earth when near perigee. Sputnik 5 carried two dogs which were successfully returned to the Earth after spending a day in orbit.

The American satellites have been injected into orbits of various inclinations. The early Explorers and Vanguard arcs in orbits of inclination about $28-35^\circ$ while near-polar orbits were achieved with the Discoverers. Other series of launchings such as the Transit, Tiros and Echo put satellites in orbits of intermediate inclinations. In contrast to the heavy, but short-lived, Russian satellites, a number of those launched by the U.S. have been very small and have been put in larger orbits which have given them considerably longer life-times.

One launching which caused great controversy among astronomers was the so-called "West Ford Project". This project involved the launching of a Midas satellite into a polar orbit, carrying a container. This container held 350,000,000 copper needles which were intended to be dispensed from the satellite (after injection into orbit) and to form a belt around the Earth. This belt would then be

[continued on p. 167]

used as a reflector for certain radio signals. Despite protests from eminent astronomers who feared interference with terrestrial observations, the launching was performed on October 21, 1961. However although the Midas satellite was injected into orbit it appears that the needle package is still intact.

A Thor-Delta vehicle, launched from Cape Canaveral, successfully injected an Anglo-American satellite into orbit on April 26, 1962. This satellite, named "Ariel 1", weighs 132 lbs. and has a diameter of 23 inches, with extending booms and aeriels. Ariel 1 is transmitting on 136.408 Mc/s. The inclination of its orbit is 54° so that it is readily observable from the British Isles. The third stage Altair rocket is in a similar orbit. Both objects are likely to remain in orbit for a number of years.

Apart from their names, e.g. Sputnik 4 Cabin or Tiros 1, the satellites are also classified according to their date of launch. Thus 1961 α refers to the launching of Samos 2. The next satellite launching was 1961 β and so on. A number following the Greek letter is intended to indicate the relative brightness of the satellites put in orbit. However, the rule does not appear to have been followed invariably. In this table are given the designation and name of the satellite, the launch date and some initial orbital data. This data consists of the inclination to the equator (*i*), the nodal period of revolution (*P*), the perigee and apogee heights, and the eccentricity (*e*). The names of those satellites which have already disintegrated in the Earth's atmosphere are printed in italics. A satellite which carried a human being is indicated by an asterisk.

Since the last edition of *Whitaker's Almanack* the following satellites launched in the years 1957-60 inclusive have disintegrated in the Earth's atmosphere:—

1959 δ 1, Explorer 6; 1959 δ 2, Explorer 6 Rocket; 1960 ϵ 1, Sputnik 4.

Some American satellites are of military significance and details of their orbits are not disclosed. This is the reason for the gaps in the table.

Observation of Satellites

The regression of the orbit around the Earth causes alternate periods of visibility and invisibility, though this is of little concern to the radio or radar observer. To the visual observer the following cycle of events normally occurs (though the cycle may start in any position): invisibility, morning observations before dawn, invisibility, evening observations after dusk, invisibility, morning observations before dawn, and so on. With reasonably high satellites and for observers in high latitudes around the summer solstice the evening observations follow the morning observations without interruption as sunlight passing over the polar regions can still illuminate satellites which are passing over temperate latitudes at local midnight. At the moment all satellites rely on sunlight to make them visible though a satellite with a flashing light has been suggested for a future launching. The observer must be in darkness or twilight in order to make any useful observations and the durations of twilight and the sunrise, sunset times given on page II of each month will be a useful guide.

Some of the satellites are visible to the naked eye and much interest has been aroused by the spectacle of a bright satellite disappearing into the Earth's shadow. The event is even more fascinating telescopically as the disappearance occurs gradually as the satellite traverses the Earth's penumbral shadow, and during the last few seconds before the eclipse is complete the satellite may change colour (under suitable atmospheric conditions) from yellow to red. This is because the last rays of sunlight are refracted through the denser layers of our atmosphere before striking the satellite.

Some satellites rotate about one or more axes so that a periodic variation in brightness is observed. This was particularly noticeable in several of the U.S.S.R. satellites. In some cases the brightness range was 4 or 5 magnitudes and at minimum brightness the satellite was invisible to the naked eye.

Although it is still possible to make useful

observations with the naked eye many observers now use some form of optical aid to enhance the positional accuracy of their observations. A popular instrument is the "elbow" telescope with a wide field of view. However, for locating very faint satellites the more conventional astronomical telescope may be employed, though this involves the potential observer in some detailed calculations beforehand in order to set his telescope correctly.

The observer is normally supplied with details of the orbit of the satellite and the position of the satellite in this orbit for certain times. Using graphical methods or tables, the apparent altitude and azimuth of the satellite at a convenient time are derived and this information is then converted to right ascension and declination. A telescope may then be set on this point. Alternatively several such positions may be calculated, the apparent track across the sky plotted on a star map, and then binoculars or an elbow telescope may be used to scan this track at the predicted time.

The observer will start a stop-watch as the satellite crosses the line joining two identifiable stars, noting the relative distances involved. He will then compare his watch with a time signal as soon as possible—a short wave radio set to pick up such signals is a valuable asset. One of the most useful stations is DIZ (4.525 Mc/s) which gives a "pip" every second (the minute pip is noticeably lengthened). A big advantage of this station is that it is continuously transmitting. Regular observers send their observations to the Satellites Section of the D.S.I.R. Radio Research Station at Slough, from which they receive predictions.

THE ZODIAC

The Zodiac is an imaginary belt in the heavens within which lie the apparent paths of the Sun, Moon and major planets. It is bounded by two parallels generally taken as lying 8° on either side of the ecliptic or path of the Sun in its annual course. The Zodiac is divided into twelve equal parts of 30° called Signs, which are not used by astronomers, but have some import in astrology, for which the division of the Zodiac was probably made originally. The Signs of the Zodiac take their names from certain of the constellations with which they once coincided. They are assumed to begin at the vernal equinox or intersection of the plane of the ecliptic with that of the equator. This point is still called the First Point of Aries, although the Sign of Aries now lies in the constellation of Pisces, some 30° to the west. This retrograding of the equinox by about $50''$ a year is due to precession;

As this subject is so new hardly any literature in book form about satellites has been published in this country. The only notable exceptions are (1) the *Artificial Satellite Memoir* produced by the British Astronomical Association and (2) *Satellites and Scientific Research* by D. King-Hele.

Satellite research has already provided some interesting results. Among them may be mentioned a revised value of the Earth's oblateness, $1/298.2$, and the discovery of the Van Allen radiation belts. Apart from space travel itself great possibilities will be opened up in other fields in the years to come, e.g. communications, navigation and meteorology.

Space Probes

Several lunar probes have been launched. The only direct hits were scored by Lunik 2 and Lunik 2 Rocket in September, 1959. The United States announced that an attempt will shortly be made to put a probe into orbit around the Moon.

Of the nine artificial planets now in orbit six (Lunik 1 and Rocket, Pioneer 4 and Rocket, Ranger 3 and Rocket) resulted from lunar probes. The period of revolution of the first two is 450 days, of the second two, 407 days. Pioneer 5 and Pioneer 5 Rocket, period of revolution 311 days, resulted from a Venus probe launched in March, 1960. A second Venus probe was launched from a sputnik in February, 1961, and although this was scheduled to pass very close to Venus radio contact was lost when the probe was only a few million miles from the Earth.

the signs no longer coincide with the constellations whose names they bear.

A catalogue has been made (Grimaldi, 1905) of all, so far as is known, sculptured or incised representations on ancient monuments or tablets of the traditional constellation figures, either Zodiacal or otherwise, together with many modern pictures of the Zodiac. The first in the list is a roughly shaped upright, black stone about $2\frac{1}{2}$ feet high and $1\frac{1}{2}$ feet broad in the Babylonian room of the British Museum on the front of which are lightly incised ten out of the twelve Signs and other constellation figures. This was found near Baghdad and its date is estimated to be about 1187-1175 B.C.

The hour when the Sun enters each Sign of the Zodiac, which varies year by year in accordance with the leap-year cycle, and slightly for other reasons, is given in the heading of page I of each month.

THE SUMMER TIME ACTS

In 1916 an Act ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. The practice was stabilized (until the war) by the *Summer Time Act*, 1922 to 1925, which enacted that "For the purposes of this Act, the period of summer time shall be taken to be the period beginning at two o'clock, Greenwich Mean Time, in the morning of the day next following the third Saturday in April, or, if that day is Easter Day, the day next following the second Saturday in April and ending at two o'clock, Greenwich Mean Time, in the morning of the day next following the first Saturday in October."

During the Second World War the duration of Summer Time was extended and in the years 1941-45 and in 1947, Double Summer Time (2 hrs. in advance of Greenwich Mean Time) was in force. Summer Time was extended in each year from 1948 to 1952 and again in 1961 and 1962, by Order in Council.

1951 Apr. 15—Oct. 21
1952 Apr. 20—Oct. 26
1953 Apr. 19—Oct. 4
1954 Apr. 11—Oct. 3
1955 Apr. 17—Oct. 2
1956 Apr. 22—Oct. 7

1957 Apr. 14—Oct. 6
1958 Apr. 20—Oct. 5
1959 Apr. 19—Oct. 4
1960 Apr. 10—Oct. 2
1961 Mar. 26—Oct. 29
1962 Mar. 25—Oct. 28

Tidal Constants

THE TIME OF HIGH WATER at the undermentioned Ports and Places may be approximately found by taking the appropriate Time of High Water at the Standard Port (as shown on pp. 171, 172, etc.) and adding thereto the quantities annexed. The time thus found will be G.M.T. for British, Irish, French and Belgian ports, and for Netherlands Ports G.M.T.+1 hour. The columns headed "Springs" and "Neaps" show the height of the tide above datum for Mean High Water Springs and Mean High Water Neaps respectively. During the period of SUMMER TIME one hour must be added to the times shown on pp. 171-182, before the system is applied.

Tidal data is no longer available for a number of places which formerly appeared in the list below. These places (with the name of the substitute now recorded) are: *Air Point* (Eastyn Quay); *Ardrishaig* (East Loch Tarbert); *Arisaig* (Loch Moidart); *Ayr Pt., Lo.M.* (Peel); *Beachy Head* (Eastbourne); *Beaumaris* (Menai Bridge); *Brielle* (Scheveningen); *Broughty Ferry* (Newburgh); *Burryport* (Whiteford Lighthouse); *Caen* (Cayeux); *Caernarvon* (Llanddwyn Isld.); *Chesilton* (Worthing); *Dumbarton* (Bowling); *Dumfries* (Port Carlisle); *Fareham* (Itchenor); *Fifeness* (Anstruther Easter); *Glasson Dock* (Tarn Pt.); *Gravesend* (Tilbury Dock); *Greenwich* (R. Albert Dock); *Hythe* (Totland Bay); *Lancaster* (Dudden Bar); *Lynmouth* (Porlock Bay); *Nash Pt.* (Chepstow); *Needles Pt.* (Freshwater Bay); *Neath* (Porthcawl); *Nore Lt.* (Chatham); *Port Harrington* (Hestan Islet); *Portishead* (Avonmouth); *St. Agnes* (Coverack); *St. Mary's* (Sennen Cove); *Start Pt.* (Lulworth Cove); *Stockton* (Seaham); *Sutton Bridge* (Blacktoft); *Torbay* (Torquay); *Woolwich* (Hammersmith Br.); *Worms Head* (Ferryside); *Honfleur Harbour* (Duclair).

The Standard Ports referred to in the heading are given in *italic*.

EXAMPLE.—Required times of high water at Stranraer on April 6, 1963:—

(a) Morning Tide.

Appropriate time of high
water at *Greenock* 1054 hrs. (*April 6*)
Tidal difference..... -0020 hrs.

H.W. at *Stranraer*... 1034 hrs.

(b) Afternoon Tide.

Appropriate time of high
water at *Greenock*..... 2346 hrs. (*April 6*)
Tidal difference..... -0020 hrs.

H.W. at *Stranraer*... 2326 hrs.

Chronological Notes

TIME MEASURES

Kelvin (1883) estimated the age of the earth's crust at 20-400 million years. Study of radio-activity has since shown cooling to have been slower. Holmes and others gave 1,500-2,000 million years as the age of the oldest known rocks. Jeffreys suggests an age not exceeding 8,000 million years for the separate existence of the earth, which, probably with other related planets, separated from the sun after a star-collision. Very early rocks, almost without traces of fossils, are variously named in North America and Europe and account for a period down to about 500 million years ago.

PALÆOZOIC (Old Animal Life) PERIODS include:—

Cambrian, Ordovician and Silurian rocks, all named from Wales (Cambria, Ordovices, Silures, the two latter ancient Celtic peoples). These rocks account for about 200 million years and there then followed a major phase of mountain-building, called *Caledonian* because studied early in Scotland, characterized by N.E.-S.W. lines of hills and valleys in several areas.

Devonian, including the Old Red Sandstone.

Carboniferous, including Mountain Limestone, Millstone Grit and Coal Measures.

These rocks account for about 100 million years and then there followed a major phase of mountain-building called *Hercynian* because widespread in W. Germany and adjacent areas. In Britain there are E.-W. lines of hills and valleys, and some N.-S.

MESOZOIC (Middle Forms of Life) PERIODS include:—

Permian rocks, widespread in Perm district, U.S.S.R., *Triassic*, including New Red Sandstone. *Jurassic*, important in the Jura Mts. *Cretaceous*, including the Greensands and the Chalk of England. In the Mesozoic, modern large land groups of animals, reptiles, birds and mammals first appear, but almost no modern genera or species of animals are known.

CAINOZOIC or CENOZOIC (Recent forms of Life) PERIODS include:—

Eocene. A few existing genera or species. *Oligocene*. A minority of existing forms. *Miocene*. Approach to a balance of existing and extinct forms. *Pliocene*. A majority of existing forms. *Pleistocene*. A very large majority of existing forms. *Holocene*. Existing forms only, save for a few exterminated by man. In the last 50 million years, from the Miocene through the Pliocene, the Alpine-Himalayan and the circum-Pacific phases of mountain building reached their climax.

During the Pleistocene period ice-sheets repeatedly locked up masses of water as land ice, its weight depressed the land, but the locking up of water lowered sea-level by 100-200 metres. Milankovitch has worked out variations of radiation theoretically receivable from the sun and has reached conclusions not very markedly different as to dates from those of Penck who studied sediments, and both can fit into Deperet's scheme based on study of river terraces. Milankovitch gives 600,000 years for the Pleistocene.

Phases of the Pleistocene:—

(a) Early Glaciations (probably 2), Gunz glaciations of Penck's Alpine series. About 600 to 500 thousand years ago.

(b) An interglacial phase with high sea level, Milazzian terraces (of Deperet's series) around the Mediterranean. About 500,000 years ago.

(c) A second pair of Glaciations, the Mindel of

Penck's series. About 500 to rather before 400 thousand years ago.

(d) A long interglacial phase with high sea level, but less high than during (b). Tyrrhenian terraces around the Mediterranean. From about 400 to about 200 thousand years ago.

(e) The penultimate series of glaciations (probably 3), the Riss of Penck's series. About 200 to 150 thousand years ago.

(f) An interglacial phase with fairly high sea level, less high than during (d). Monastirian terraces around the Mediterranean. From about 150 to about 120 thousand years ago.

(g) The ultimate series of glaciations (probably 3, preceded perhaps by a cool phase), the Wurm of Penck's series. From about 115 to rather more than 20 thousand years ago.

(h) The last glacial retreat merging into the Holocene period about 10,000 or 8,000 years ago.

MAN IN THE PLEISTOCENE

In the East African Miocene have been found by Hopwood and Leakey fragmentary remains of apes with possible human links in thigh bone characters.

In S. Africa at Taungs, Sterkfontein and Kroomdraai have been found remains of *Australopithecus*, *Plesianthropus* and *Paranthropus*, possibly linked with early man in limb characters and some features of skull and teeth though the brains are small and rather ape-like. The cave deposits in which they occur are supposed to be late Pliocene or early Pleistocene. The late Dr. Broom inferred that *Australopithecus prometheus* made use of fire, i.e., was, at any rate, near-human.

Java and Peking finds began with Dubois' discovery (1892) of an imperfect skull cap, some teeth and a possibly related femur indicating the erect posture. Later finds by von Koenigswald and by Weidenreich (1937-41) have emphasized the human relationship of the Java specimens, and also give evidence of gigantism (the name *Megantropus* has been used). The specimens are usually given a Middle Pleistocene age. Oppenorth (1932) discovered robust skulls and human Pleistocene bones on a terrace of the Solo river, Java. Twelve specimens from Chou Kou Tien near Peking studied by Black and Weidenreich and called *Sinantropus* are broadly like the Java finds; the name *Pithecanthropus* had better be used for all.

A jaw from Mauer, Heidelberg, found 1902, and dated to the mid Pleistocene is very large but human in form. A skull cap from Neandertal near Düsseldorf, Germany, has been under discussion for 100 years. It and later found congeners belong to the onset of the 4th series of Glaciations (Penck's Wurm). The best preserved of these skulls is that of La Chapelle aux Saints (France) with very strong brow-ridges. Related skulls of rather earlier date from Steinheim, Ehringsdorf, Krapina and elsewhere are less specialized and more akin to modern man. Skulls from Sacco Pastore and Circeo in Italy are related to the Neandertal group.

Mt. Carmel, Palestine, has yielded to Professor Dorothy Garrod and Dr. McCown several mid- or late Pleistocene specimens apparently related both to modern types and to the Neandertal group.

A skull from Galilee, and a skull from Broken Hill, Rhodesia, are related to the Neandertal group.

Recently Oakley has estimated the age of Pleistocene fossil bones from their fluorine content. The back part of a skull from Swanscombe, N. Kent, has in this way been dated to the mid Pleistocene. Its discoverer, Marston, has won widespread support for his view linking it with modern types.

Controversy over the Piltdown skull and jaw is ended. The skull is dated by Oakley's method as late Pleistocene, or later, so the old name *Eoanthropus* is inappropriate. The ape-like jaw is found to be modern and to have nothing to do with the skull.

With the last retreat of the ice sheets it seems that the Neandertal group, and probably the Pithecanthropus group, became extinct. Well-known specimens of man of modern type with diversity of form have been found at Combe Capelle, Cro-Magnon, Chancelade and elsewhere in the later Pleistocene in France and others in Czechoslovakia.

HUMAN CULTURAL STAGES

Until about 8 or 7 thousand years ago men lived by hunting and collecting. In the middle of the Pleistocene they already made finely shaped hand axes (Abbevillian and Acheulian) from stone cores by chipping off flakes, using flint, chert, obsidian, rhyolite, quartzite, etc. in many regions, and these cultures spread from Africa to Spain, France and Britain during some interglacial periods. Apparently the men hunted and made pitfalls for animals as Leakey has shown at Olororgesailie in Kenya, while women and children collected. Fire was used very early. In the continental interior of Eurasia rough stone flakes were long used rather than shaped stone cores and apparently in cold periods at any rate this culture spread west to Britain. In the later part of the Riss-Wurm interglacial, stone flakes became finer especially in regions where contact was made with makers of core-tools, and in some groups both cores and flakes were used.

With the last retreat of the ice-sheets stone flakes became the dominant tools, with diverse types suited to scraping, boring, sawing, etc.—Aurignacian, followed in France by Solutrian, in which long leaf-like flakes were treated as cores and shaped very skillfully by pressing off flakes. The Magdalenian stage next following used flakes but specialized in implements of bone, horn and ivory. In some areas the Aurignacian grades into the Magdalenian and this seems to be largely the case in parts of Britain. All the above cultures are often grouped as Palæolithic.

About 8 or 7 thousand years ago people in S.W. Asia began to cultivate cereals on river mud laid down by annual floods, thus keeping the soil fertile and allowing durable settlement with concomitant advances in mud brick construction, pot-making, stone grinding, which had begun earlier and gave an improved control of shape, carpentering, weaving and other inventions. In all this development

the Nile valley was early concerned and its regular floods from summer rains in Abyssinia could be managed to give such an advantage that Egypt gained a unique primacy in early history. Domestication of animals was added very early to cultivation of crops, most probably as a source of milk, flesh, leather, sinews, etc. Neolithic Culture was thus characterized by stone axes shaped by grinding or rubbing, by cultivation, usually by domestic animals, often by durable settlements and a variety of arts and crafts.

Especially after the practice of castration of surplus male animals was introduced, domestic beasts were used for work, notably for pulling a modified hoe to scratch the drying surface of river-mud and so keep it from caking too hard. This is the early plough, valuable in lands where plant food in the soil is drawn up nearly to the surface as moisture rises and evaporates. Animals were also used as porters and tractors.

Heating stones in fires, probably for water-heating, led to the discovery of impure copper and the invention of bronze (standardized at about 10 per cent. tin and 90 per cent. copper) at the beginning of the Bronze Age in S.W. Asia and/or Egypt. By that time, about 5,000 years ago, cities and trade were developing and the basic arts were spreading to the Indus basin, the Mediterranean and the loess areas of Central Europe. Western Europe on the one hand and N. China on the other were affected somewhat later but more than 4,000 years ago; and China rapidly advanced to a high skill in pottery and bronze. Over 3,000 years ago in Anatolia the smelting of iron was developed, and it spread thence in the next centuries, beginning the Iron Age. Iron nails and tools made possible larger boats, houses, furniture and especially larger ploughs, working deeper into the earth and so suited to cooler lands, where plant food was often deep in the soil because evaporation was not very strong and rain might occur at every season. So the farmer needed to bring up the deeper layers to the surface in north-west Europe. With the spread of iron, especially about 2,000 to 1,000 years ago, northwest Europe emerged from its former low status and went ahead, still more after houses were improved with more privacy, chimneys and beds.

The evolution of culture in the Americas is much discussed. Early drifts of hunters via Alaska may have occurred in the late Pleistocene. Probably a good deal of Neolithic culture (stone implements, pottery, etc.) spread by the same route to America about or after 5,000 years ago but did not take Asiatic cereals or domestic animals. America also received contributions to its life by maritime routes especially following the North Pacific currents.

TIME MEASUREMENT AND CALENDARS

MEASUREMENTS OF TIME

Measurements of Time.—These are based on the time taken by the earth to rotate on its axis (*Day*); by the moon to revolve round the earth (*Month*); and by the earth to revolve round the sun (*Year*). From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the *Day*, which begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 at noon (when the sun crosses the meridian), and these hours are designated A.M. (*ante meridiem*); and again from noon up to 12 at midnight, which hours are designated P.M. (*post meridiem*), except when the *Twenty-four Hour* reckoning is employed. The 24-hour reckoning ignores A.M. and P.M., and the hours are numbered 0 to 23 from midnight to midnight.

Colloquially the 24 hours are divided into *day* and *night*, day being the time while the sun is above the horizon (including the four stages of twilight defined on p. 139). Day is subdivided further into *morning*, the early part of daytime, ending at noon; *afternoon* from noon to 6 p.m. and *evening*, which may be said to extend from 6 p.m. until midnight. *Night*, the dark period between day and day, begins at the close of Astronomical Twilight (see p. 139) and extends beyond midnight to sunrise the next day.

The names of the *Days*—Sunday, Monday, Tuesday (Tiw=God of War), Wednesday (Woden or Odin), Thursday (Thor), Friday (Frig=wife of Odin), and Saturday are derived from Old English translations or adaptations of the Roman titles (Sol, Luna, Mars, Mercurius, Jupiter, Venus and Saturnus).

The *Week* is a period of 7 days.

The *Month* in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary from 28 (or 29) days to 31.

The Year.—The *Equinoctial or Tropical Year* is the time that the earth takes to revolve round the sun from equinox to equinox, or 365.2422 mean solar days. The *Calendar Year* consists of 365 days, but a year the date of which is divisible by 4, without remainder, is called *bissextile* (see Roman Calendar) or *Leap Year* and consists of 366 days, one day being added to the month February, so that a date "leaps over" a day of the week. The last year of a century is not a leap year unless its number is divisible by 400 (e.g. the years 1800 and 1900 had only 365 days).

The Historical Year.—Before the year 1752, two Calendar systems were in use in England. The Civil or Legal Year began on March 25, while the Historical Year began on January 1. Thus the Civil or Legal date 1658 March 24, was the same day as 1659 March 24 Historical; and a date in that portion of the year is written as: March 24 1658, the lower figure showing the Historical year.

The Masonic Year.—Two dates are quoted in warrants, dispensations, etc., issued by the United Grand Lodge of England, those for the current year being expressed as *Anno Domini 1963—Anno Lucis 5963*. This *Year of Light* is based on the Book of Genesis 1: 3, the 4000 year difference being derived from *Ussher's Notation*, published in 1654, which placed the Creation of the World in 4,000 B.C.

Regnal Years.—These are the years of a sovereign's reign, and each begins on the anniversary of his or her accession: e.g. Regnal year 11 of the present Queen began on Feb. 6, 1962. The system was used for dating Acts of Parliament until 1962. The *Summer Time Act of 1925*, for example, is quoted as 15 and 16 Geo. V. c. 64, because it became law in the session which extended over part of both of these regnal years. The regnal years of Edward VII began on January 22, which was the day of Queen Victoria's death in 1901, so that Acts passed in that reign are, in general, quoted with only one year number, but year 10 of the series ended on May 6, 1910, being the day on which King Edward died, and Acts of the Parliamentary Session 1910 are headed 10 Edw. VII. and 1 Geo. V.; Acts passed in 1936 were dated 1 Edw. VIII. and 1 Geo. VI.; Acts passed in 1952 were dated 16 Geo. VI. and 1 Elizabeth II. An Act to effect the dating of Acts of Parliament by the calendar year, from Jan. 1, 1963, received the Royal Assent on July 19, 1962.

New Year's Day.—In England in the seventh century, and as late as the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year with the Feast of The Annunciation of the Blessed Virgin (Lady Day) on March 25 and this practice was adopted generally in the fourteenth century. The Civil or Legal year in the British Dominions (exclusive of Scotland), as opposed to the Historical, which already began on Jan. 1, began with "Lady Day" until 1751. But in and since 1752 the civil year has begun with Jan. 1. Certain dividends are still paid by the Bank of England on dates based on Old Style. The Income Tax year begins on April 6 (the New Style equivalent of March 25, Old Style) in accordance with Act of Parliament (39 Geo. III. 1798). New Year's Day in Scotland was changed from March 25 to Jan. 1 in 1600. On the Continent of Europe, Jan. 1 was adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal, and the Roman Catholic Netherlands in 1555,

Prussia, Denmark and Sweden in 1559, France 1564, Lorraine 1579, Protestant Netherlands 1583, Russia 1725, Tuscany 1751.

The Longest Day.—The longest day measured from sunrise to sunset at any place is the day on which the Sun attains its greatest distance from the Equator, north or south, accordingly as the place is in the northern or southern hemisphere; in other words, it is the day of the Calendar on which a Solstice falls. If a Solstice falls on June 21 late in the day, by Greenwich Time, that day will be the longest of the year at Greenwich, though it may be by only a second of time or a fraction thereof, but it will be on June 22 (local date) in Japan, and therefore June 22 will be the longest day there and at places in Eastern longitudes.

But leaving this question of locality and confining consideration to Greenwich, the Solstices are events in the Tropical Year whose length is 365½ days less about 11 minutes, and therefore, if a Solstice happens late on June 21 in one year, it will be nearly six hours later in the next, or early on June 22, and that will be the longest day. This delay of the Solstice is not permitted to continue because the extra day in Leap Year brings it back a day in the Calendar, and at the present time three of the four years in the Leap Year cycle have the longest day on June 21, one on June 22. By the end of the century the longest day will fall each year on June 21.

Because of the 11 minutes above mentioned the additional day in Leap Year brings the Solstice back too far by 44 minutes, and the time of the Solstice in the calendar is earlier as the century progresses, being about 18 hours too soon at the end of the hundred years.

To remedy this the last year of a century is in most cases not a Leap Year, and the omission of the extra day puts the date of the Solstice later by about six hours too much, compensation for which is made by making the fourth centennial year a Leap Year.

The Shortest Day.—Similar considerations apply to the shortest day of the year, or the day of the Winter Solstice. At the present time one year of the Leap Year cycle has the shortest day on Dec. 21 and the rest on Dec. 22, but in roughly the last quarter of the century the shortest day will fall on Dec. 21 in two years of each four and on Dec. 22 in the remaining two years. The difference due to locality also prevails in the same sense as for the longest day.

At Greenwich the Sun sets at its earliest by the clock about ten days before the shortest day, which is a circumstance that may require explanation. The daily change in the time of sunset is due in the first place to the Sun's movement southwards at this time of year, which diminishes the interval between the Sun's southing or Apparent noon, and its setting, and, secondly, because of the daily decrease of the Equation of Time subtractive from Apparent time, which causes the time of Apparent noon to be continuously later, day by day, and so in a measure counteracts the first effect. The rates of the resulting daily acceleration and retardation are not equal, nor are they uniform, but are such that their combination causes the date of earliest sunset to be Dec. 13 or 14 at Greenwich. In more southerly latitudes the effect of the movement of the Sun is less, and the change in the time of sunset depends on that of the Equation of Time to a greater degree, and the date of earliest sunset is earlier than it is at Greenwich.

Lord Mayor's Day.—The Lord Mayor was previously elected on the day of the Feast of St. Simon and St. Jude (Oct. 28), and from the time of

Edward I, at least, was presented to the King or to the Barons of the Exchequer on the following day, except that day be a Sunday.

The day of election was altered to Oct. 16 in 1346, and after some further changes was fixed for Michaelmas Day in 1546, but the ceremonies of admittance and swearing-in of the Lord Mayor continued to take place on Oct. 28 and 29 respectively until 1751. In 1752, when Sept. 3 was reckoned as Sept. 14 at the reform of the Calendar, the Lord Mayor was continued in office until Nov. 8, the "New Style" equivalent of Oct. 28. The Lord Mayor is now presented to the Lord Chief Justice at the Royal Courts of Justice, on the second Saturday in November to make the final declaration of office, having been sworn in at Guildhall on the preceding day.

Dog Days.—The days about the heliacal rising of the Dog Star, noted from ancient times as the hottest and most unwholesome period of the year in the Northern Hemisphere. Their incidence has been variously calculated as depending on the Greater or Lesser Dog Star (Sirius or Procyon) and their duration has been reckoned as from 30 to 54 days. A generally accepted period is from July 3 to August 15.

Metonic (Lunar, or Minor) Cycle.—In the year 432 B.C. Meton, an Athenian astronomer, found that 235 Lunations are very nearly, though not exactly, equal in duration to 19 Solar Years, and, hence, after 19 years the Phases of the Moon recur on the same days of the month (nearly). The dates of Full Moon in a cycle of nineteen years were inscribed in *figures of gold* on public monuments in Athens, and the number showing the position of a year in the Cycle is called the *Golden Number* of that year.

Solar (or Major) Cycle.—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same days of the month.

Julian Period.—Proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year 4713 B.C. 7980 is the product of the number of years in the Solar Cycle, the Metonic Cycle and the cycle of the Roman Indiction ($28 \times 19 \times 15$).

Roman Indiction.—A period of fifteen years, instituted for fiscal purposes about A.D. 300.

Epact.—The age of the calendar Moon on Jan. 1 in each year, formerly used in determining the date of Easter.

THE FOUR SEASONS

SPRING, the first season of the year, is defined astronomically to begin in the *Northern Hemisphere* at the Vernal Equinox when the Sun enters the sign Aries (*i.e.* about March 21) and crosses the Equator, thus causing day and night to be of equal length all over the world; and to terminate at the Summer Solstice. In *Great Britain*, Spring in popular parlance comprises the months of February, March and April; in *North America* the months of March, April and May. In the *Southern Hemisphere* Spring corresponds with Autumn in the Northern Hemisphere.

SUMMER, the second and warmest season, begins astronomically at the Summer Solstice when the Sun enters the sign Cancer (about June 21). The Sun then attains its greatest northern declination and appears to stand still, the times of sunrise and sunset and the consequent length of the day showing no variation for several days together, before and after the Longest Day (June 21 or 22). Summer terminates at the Autumnal Equinox. In popular parlance Summer in *Great Britain* includes the

months of May, June, July and August, Midsummer Day being June 24. In *North America* the season includes the months of June, July and August.

AUTUMN, the third season, begins astronomically at the Autumnal Equinox (*i.e.*, about September 21) when the Sun enters the sign Libra, the beginning of which sign is at the intersection of the Equator and the Ecliptic, the point in the sky where the Sun crosses from N. to S. of the Equator and causes the length of day and night to be equal all over the world. In *Great Britain* it is popularly held to include the months of September and October. A warm period sometimes occurs round about St. Luke's Day (Oct. 18) and is known as "St. Luke's Summer." In *North America*, Autumn, or "The Fall," comprises September, October and November. Autumn ends at the Winter Solstice. In the *Southern Hemisphere* it corresponds with Spring of the Northern Hemisphere.

WINTER, the fourth and coldest season, begins astronomically at the Winter Solstice (*i.e.* about Dec. 21) when the Sun enters the sign Capricornus, and ends at the Vernal Equinox. In *Great Britain* the season is popularly held to comprise the months of November, December and January, midwinter being marked by the Shortest Day. A warm period sometimes occurs round about Martinmas (Nov. 11) and is known as "St. Martin's Summer." In *North America* the season includes the months of December, January and February. In the *Southern Hemisphere* it corresponds with Summer of the Northern Hemisphere.

THE ROMAN CALENDAR

Roman.—Roman historians adopted as an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C., and the ordinal number of the years in Roman reckoning is followed by the letters A.U.C. (*Ab Urbe Condita*), so that the year A.D. 1953 is MMDCCXCVI (2716), A.U.C. The Calendar that we know has developed from one established by Romulus, who is said to have used a year of 304 days divided into ten months, beginning with March, to which Numa added January and February, making the year consist of 12 months of 30 and 29 days alternately, with an additional day so that the total was 355. It is also said that Numa ordered an intercalary month of 22 or 23 days in alternate years, making 90 days in eight years, to be inserted after Feb. 23, but there is some doubt as to the origination and the details of the intercalation in the Roman Calendar, though it is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year 46 B.C. Julius Cæsar, who was then Pontifex Maximus, found that the Calendar had been allowed to fall into some confusion. He therefore sought the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption (45 B.C.) of the Julian Calendar, and, by a slight alteration, to the Gregorian now in use. The year 46 B.C. was made to consist of 445 days, and is called the *Year of Confusion*. In the Roman (Julian) Calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days before the next coming point, the first and last being counted. These three points were (1) the Kalends; (2) the Nones; and (3) the Ides. Their positions in the months and the method of counting from them will be seen in the Table on p. 187. The year containing 366 days was called *bissextilis annus*, as it had a doubled sixth day (*bissextus dies*) before the March Kalends on Feb. 24—*ante diem sextum Kalendas Martias*, or VI Kal. Mart.

Present Days of the Month	March, May, July, October have thirty-one days	January, August, December have thirty-one days	April, June, September, November have thirty days	February has twenty-eight days, and in Leap Year twenty-nine

THE CHRISTIAN CALENDAR

In the Christian chronological system the years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (*Ante Christum*), and A.D. (*Annus Domini*). The correlative dates of the epoch are the 4th year of the 194th Olympiad, the 753rd year from the Foundation of Rome, A.M. 3761 (Jewish Chronology), and the 4714th year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (A.D. 596), but was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, A.D. 816. The actual date of the birth of Christ is somewhat uncertain. Dec. 25, 4 B.C., is supported by several lines of argument.

Old and New Style.—In the Julian Calendar all the centennial years were Leap Years, and for this reason towards the close of the sixteenth century there was a difference of 10 days between the tropical and calendar years; or, in other words, the equinox fell on March 11 of the Calendar, whereas at the time of the Council of Nicaea, A.D. 325, it had fallen on March 21. In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that of the end-century years only the fourth should be a Leap Year (see p. 185). This change was adopted by Italy, France, Spain, and Portugal in 1582; by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders on Jan. 1, 1583, Poland 1586, Hungary 1587, the

German and Netherland Protestant States and Denmark 1700, Sweden (gradually) by the omission of eleven leap days, 1700—1740; Great Britain and her Dominions (including the North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 14). This *Gregorian Calendar* was adopted by Japan in 1872, China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1917, by Yugoslavia and Roumania in 1919, and by Greece in February, 1923. The Russian, Greek, Serbian and Roumanian Churches did not abandon the Julian Calendar until May, 1923, when the *Gregorian*, slightly modified, was adopted. The difference between the Old and New Styles was 11 days after 1752, 12 days after 1800, and has been 13 days since 1900. It happened that a change of the beginning of the year from March 25 to January 1 was made in England in 1752, the year in which the change from Julian to *Gregorian Calendar* was made, and for that reason the words Old and New Style have been used in a sense which is not strictly correct, but is nevertheless expressive.

The Dominical Letter is one of the letters A—G which are used to denote the Sundays (Lord's Days) in successive years. If the first day of the year is a Sunday the letter is A; if the second, B; the third, C; and so on. Leap year requires two letters, the first for Jan. 1—Feb. 29, the second for March 1—Dec. 31.

Epiphany.—The Feast of the Epiphany, commemorating the manifestation of the infant Jesus to the Gentiles, later became associated with the offering of gifts by the Magi. The day was of

1968	Feb. 28	April 14	May 23	June 2	xxiv	Dec. 1

NOTES CONCERNING TABLE OF MOVABLE FEASTS

Ash Wednesday (first Day in Lent) can fall at earliest on February 4 and at latest on March 10.

Easter Day can fall at earliest on March 22 and at latest on April 25.

Ascension Day can fall at earliest on April 30 and at latest on June 3.

Whit Sunday can fall at earliest on May 10 and at latest on June 13.

Rogation Sunday is the Sunday next before Holy Thursday (Ascension Day).

Trinity Sunday is the Sunday next after Whit Sunday.

Corpus Christi falls on the Thursday next after Trinity Sunday.

There are not less than xxii and not more than xxvii Sundays after Trinity.

Advent Sunday is the Sunday nearest to November 30.

PERPETUAL CALENDAR

OR TABLES FOR FINDING THE DAY OF THE WEEK FOR ANY DATE A.D.

(Copyright by A. F. L. Wilkinson)

TO USE THE CALENDAR:—Look up the Index Numbers corresponding to the Century, the Year (last two figures) and the Month, respectively, in the first three tables; add these three numbers together and add also the Day of the Month; in the fourth table, opposite the sum obtained, read the day of the Week.

NOTE.—In England the change from the Julian System or Old Style to the Gregorian System or New Style, was made in September, 1752, when the 11 days 3rd to 13th inclusive were omitted, and Wednesday Sept. 2 was immediately followed by Thursday Sept. 14. Other countries made the change at dates varying from 1582 to 1940. (See p. 187.)

If it is desired to look up a date after 1752 in Old Style, or before 1752 in New Style, it can be done by taking a date 700 years earlier in the first case or 400 years later in the second case; e.g. 1923 in Old Style is the same as 1223, and 1582 in New Style is the same as 1982.

exceptional importance from the time of the Council of Nicaea (A.D. 325) as the primate of Alexandria was charged at every Epiphany Feast with the announcement in a letter to the Churches of the date of the forthcoming Easter. The day was of considerable importance in Britain as it influenced dates, ecclesiastical and lay, e.g. *Plow Monday*, when work was resumed in the fields, falls upon the Monday in the first full week after the Epiphany.

Lent.—The Teutonic word *Lent*, which denotes the Fast preceding Easter, originally meant no more than the Spring season; but from Anglo-Saxon times, at least, it has been used as the equivalent of the more significant Latin term *Quadragesima*, meaning the "Forty Days" or, more literally, the fortieth day. As early as the fifth century some of the Fathers of the Church put forward the view that the forty days Fast is of Apostolic origin, but this is not supported or believed by modern scholars; and it appears to some that it dates from the early years of the fourth century. There is some suggestion that the Fast was kept originally for only forty hours. *Ash Wednesday* is the first day of Lent, which ends at midnight before Easter Day.

Sexagesima and Septuagesima.—It has been suggested that the unmeaning application of the names *Sexagesima* and *Septuagesima* to the second and third Sundays before Lent was made by analogy with the names *Quadragesima* and *Quinquagesima*. Another less likely conjecture is that *Septuagesima* means the seventieth day before the Octave of Easter. It is not certain whether the name *Quinquagesima* is due to the fact that the Sunday in question is the fiftieth day before Easter (reckoned inclusive) or was simply formed on the analogy of *Quadragesima* (*New English Dictionary*).

Palm Sunday commemorates the triumphal entry of Our Lord into Jerusalem and is celebrated in Britain (where palm is not available) by branches of willow gathered for use in the decoration of churches on that day.

Maunder Thursday, the day before Good Friday, the name itself being a corruption of *dies mandati* (day of the mandate) when Christ washed the feet of the disciples and gave them the mandate to love one another.

Easter-Day is the first Sunday after the full moon which happens upon, or next after, the 21st day of March; and if the full moon happens upon a Sunday, Easter-Day is the Sunday after. This definition is contained in an Act of Parliament (24 Geo. II., cap. 23), and explanation is given in the preamble to the Act that the day of Full Moon depends on certain tables that have been prepared. These are the tables whose essential points are given in the early pages of the Book of Common Prayer. The Moon referred to is not the real moon of the heavens, but a hypothetical Moon on whose "Full" the date of Easter depends, and the lunations of this "Calendar" Moon consist of twenty-nine and thirty days alternately with certain necessary modifications to make the date of its Full agree as nearly as possible with that of the real Moon, which is known as the *Paschal Full Moon*.

A Fixed Easter.—As at present ordained, Easter falls on one of 35 days (March 22—April 25). On June 15, 1928, the House of Commons agreed to a motion for the third reading of the Bill that Easter Day shall, in the Calendar year next but one after the commencement of the Act and in all subsequent years, be the first Sunday after the second Saturday in April. Easter would thus fall between April 9 and 15, both inclusive—that is, on the second or third Sunday in April. A clause in the

Bill provided that henceforth it shall come into operation regard shall be had to any opinion expressed officially by the various Christian Churches. Although there has been some support, there is no present prospect of the adoption of a Fixed Easter.

Holy Days and Saints Days were the normal factors in early times for settling the dates of future and recurrent appointments, e.g. the *Quarter Days* in England and Wales are the Feast of the Nativity, the Feast of the Annunciation, the Feast of St. John the Baptist and the Feast of St. Michael and All the Holy Angels, while *Term Days* in Scotland are Candlemas (Feast of the Purification), Whitsunday (a fixed date), Lammas (Loaf Mass) and Martinmas (St. Martin's Day). *Law Sittings* in England and Wales commence on the Feast of St. Hilary and the term which begins on Old Michaelmas Day ends on the Feast of St. Thomas the Apostle.

The number of Saints commemorated in the Calendar of the Book of Common Prayer is 73, but (with the exception of All Saints' Day) "days" are appointed only for those whose names are mentioned in Scripture. *Red Letter Days* (see also p. 221) were Holy Days and Saints Days indicated in early ecclesiastical calendars by letters printed in red ink. The days to be distinguished in this way were finally approved at the Council of Nicaea, A.D. 325, and special services are set apart for them in the Book of Common Prayer.

Regation Days.—These are the Monday, Tuesday and Wednesday preceding Ascension Day, "Holy Thursday", and in the fifth century were ordered by the Church to be observed as public Fasts with solemn processions and supplications. The processions were discontinued as religious observances at the Reformation, but survive in the ceremony known as "Beating the Parish Bounds."

Ember Days.—The Ember Days at the Four Seasons are the Wednesday, Friday and Saturday after (1) the First Sunday in Lent, (2) the Feast of Pentecost, (3) September 14, (4) December 13.

Whit Sunday.—It is generally said that this name is a variant of White Sunday, and was so called from the albs or white robes of the newly baptised. But other derivations have been suggested. An early writer says: "This day is called Wyt Sunday because the Holy Ghost brought Wyt and Wisdom unto Christ's disciples, and filled them full of ghostly wit."

Trinity Sunday.—The Festival in honour of the Trinity is observed on the Sunday following Whit Sunday, and subsequent Sundays are reckoned in the Church of England as "after Trinity"; in the Roman Catholic Church Sundays are reckoned "after Pentecost."

Thomas Becket, called by his contemporaries Thomas of London (born 1118; murdered Dec. 29, 1170), was consecrated Archbishop of Canterbury on the Sunday after Whit Sunday and his first act was to ordain that the day of his consecration should be held as a new festival in honour of the Holy Trinity. The observance thus originated spread from Canterbury throughout the whole of Christendom.

Advent Sunday is the Sunday nearest to St. Andrew's Day, Nov. 30, which allows three Sundays between Advent and Christmas Day in all cases. The Sunday preceding Advent is the 27th after Trinity if Easter falls on one of the days, March 22-25 inclusive. It is the 22nd after Trinity when Easter Day is on April 24 or 25. If the date of Easter were determined as proposed (see *Fixed Easter*), there would generally be 24 Sundays after Trinity, the number being 25 only in the years when Easter fell on April 9. As the rubric ordains that the Epistle and Gospel for the

25th Sunday after Trinity shall always be read upon the Sunday next before Advent, it follows that those offices appointed for the 24th Sunday would be little used. With a Fixed Easter there would never be a sixth Sunday after Epiphany. There would be a fifth Sunday when Easter Day fell on April 15 or on April 14, the year being a leap year.

Thistle Sunday (Scotland) is the first Sunday after St. Andrew's Day.

THE JEWISH CALENDAR

Origin.—The story in the Book of Genesis that the Flood began on the seventeenth day of the second month; that after the end of 150 days the waters were abated; and that on the seventeenth day of the seventh month the Ark rested on Mount Ararat, indicates a calendar of some kind and that the writers recognized 30 days as the length of a lunation. There is other mention of months by their ordinal numbers in the Book of Genesis and in establishing the rite of the Passover Moses spoke of *Abib* as the month when the Israelites came out from Egypt and *Abib* was to be the first month of the year. In the First Book of Kings three months are mentioned by name, Zif the second month, *Ethanim* the seventh and *Bul* the eighth, but these are not names now in use. After the Dispersion, Jewish communities were left in considerable doubt as to the times of Fasts and Festivals, and this led to the formation of the Jewish Calendar as used to-day, which, it is said by some, was done in A.D. 358 by Rabbi Hillel II., a descendant of Gamaliel—though some assert that it did not happen until much later. This calendar is luni-solar, and is based on the lengths of the lunation and of the tropical year as found by Hipparchus (*Circ.* 120 B.C.) which differ little from those adopted at the present day. The year 5723 (1962-63 A.D.) is the 4th year of the 302nd *Metonic* (Minor or Lunar

Cycle of 19 years and the 11th year of the 205th *Solar* (or Major) *Cycle* of 28 years since the Era of the Creation, which the Jews hold to have occurred at the time of the Autumnal Equinox in the year known in the Christian Calendar as 3760 B.C. (954 of the Julian Period) and the epoch or starting point of Jewish Chronology corresponds to Oct. 7, 3761 B.C. At the beginning of each Solar Cycle the *Tekufah* of Nisan (the vernal equinox) returns to the same day and to the same hour.

The hour is divided into 1080 *minims* and the month between one new Moon and the next is reckoned as 29 days, 12 hours, 793 *minims*. The normal calendar year, called a Common Regular year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days, in order that each of them shall not diverge greatly from an average place in the solar year, a thirteenth month is occasionally added after the fifth month of the Civil year (which commences on the first day of month Tishri), or as the penultimate month of the Ecclesiastical (which commences on the first day of month Nisan), the years when this happens being called *Embolismic*. Of the 19 years that form a *Metonic* cycle, 7 are *embolismic*; they occur at places in the cycle indicated by the numbers 3, 6, 8, 11, 14, 17, 19, these places being chosen so that the accumulated excesses of the solar years should be as small as possible. The first of each month is called the day of New Moon, though it is not necessarily the day of astronomical New Moon, that being the day on which conjunction of Sun and Moon occurs, but there is generally a difference of a day or two. In practice, in a month which follows one of 30 days, the day preceding its first day is also observed as a day of New Moon. The dates in the Christian calendar of the first days of the months depend on that of the first of Tishri, which

JEWISH FASTS AND FESTIVALS

Tishri	1 Rosh Hoshanah (New Year).	Sivan	6 and 7 Shavuot (Pentecost: or Feast of Weeks).
"	2 " " (2nd day).		
"	3 *Fast of Gedallah.	Tammuz	17 *Fast of Tammuz.
"	10 Yom Kippur (Day of Atonement).	Ab	9 *Fast of Ab.
"	15-22 Succoth (Feast of Tabernacles).		
"	21 Hoshana Rabba.		
"	22 Solemn Assembly		
"	23 Rejoicing of the Law.		
Kislev	25 Dedication of the Temple.		
Tebet	10 Fast of Tebet.		
Adar	13 §Fast of Esther.		
"	14 Purim.		
"	15 Shushan Purim.		
Nisan	15-21 Passover		

A.M. 5723 (known as 723 in the short system) is a Common Abundant year of 12 months, 51 Sabbaths and 355 days.

A.M. 5724 (724) is a Common Regular year of 12 months, 51 Sabbaths and 354 days.

A.M. 5725 (725) is an *Embolismic* Abundant year of 13 months, 55 Sabbaths and 385 days.

NOTES.—* If these dates fall on the Sabbath the Fast is kept on the following day. This fast is observed on Adar 11 (or Ve-Adar 11 in *Embolismic* years) if Adar 13 falls on a Sabbath.

therefore controls the dates of fasts and festivals in the Jewish year. For certain ceremonial reasons connected with these, the first of Tishri must not fall on a Sunday, Wednesday or Friday, and if this should happen as the result of the computation it is postponed to the next day in the Christian calendar. Also, if the New Moon of Tishri falls on any day of the week at noon or later than noon, then the following day is to be taken for the celebration of that New Moon and is Tishri 1, provided that it is not one of the forbidden days, in which case there is a further postponement of a day. These rules and others have been considered in detail, and finally a calendar scheme has been drawn up in which a Jewish year is of one of the following six types: Common Deficient (353 days), Common Regular (354 days), Common Abundant (355 days), Embolismic Deficient (383 days), Embolismic Regular (384 days), or Embolismic Abundant (385 days).

The Regular year has an alternation of 30 and 29 days. In an Abundant year, whether Common or Embolismic, Marcheshvan, the second month of the Civil year, has 30 days instead of 29; in Deficient years Kislev, the third month, has 29 instead of 30. The additional month in Embolismic years which is called Adar I., and precedes the month called Adar in Common years and Adar II., or Ve-Adar, in Embolismic, always has 30 days, but neither this, nor the other variations mentioned, is allowed to change the number of days in the other months which still follow the alternation of the normal twelve. In Embolismic years the month intercalated precedes Adar and usurps its name, but the usual Adar festivals are kept in Ve-Adar.

These are the main features of the Jewish Calendar which must be considered permanent, because as a Jewish law it cannot be altered except by a great Synhedrion.

The Jewish day begins between sunset and nightfall. The time used is that of the meridian of Jerusalem, which is *zh. xim.* in advance of Greenwich Mean Time. Rules for the beginning of Sabbaths and Festivals were laid down for the latitude of London in the eighteenth century and hours for nightfall are now fixed annually by the Chief Rabbi.

THE MOSLEM CALENDAR

The basic date of the Moslem Calendar is the *Hejira*, or Flight of Muhammad from Mecca to Medina, the corresponding date of which is A.D. 622, July 16, in the Gregorian Calendar. *Hejira* years are used principally in Persia, Turkey, Arabia, Egypt, in certain parts of India and in Malaya. The system was adopted about A.D. 632, commencing from the first day of the month preceding the *Hejira*. The years are purely lunar and consist of 12 months containing in alternate sequence 30 or 29 days, with the intercalation of one day at the end of the 12th month at stated intervals in each cycle of 30 years, the object of the intercalation being to reconcile the date of the first of the month with the date of the actual New Moon. Some adherents still take the date of the evening of the first visibility of the crescent as that of the first of the month. In each cycle of 30 years 19 are common and contain 354 days and 11 are intercalary (355 days), the latter being called *kabishah*.

The mean length of the *Hejira* year is 354 days, 8 hours, 48 minutes and the period of mean lunation is 29 days, 12 hours, 44 minutes.

To ascertain if a *Hejira* year is common or *kabishah* divide it by 30; the quotient gives the number of completed cycles and the remainder shows the place of the year in the current cycle. If the remainder is 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 or 29 the year is *kabishah* and consists of 355 days.

Hejira year 1382 gives a quotient of 46 with a remainder of 2 and is *kabishah*. A.H. 1383, with remainder 3, and A.H. 1384, with remainder 4, are common years.

Hejira Years 1382 and 1383

Name and Length of Month	A.H. 1382	A.H. 1383
Muharram (30)...	1962 June 4	1963 May 25
Saphar (29).....	July 4	June 24
Rabia I (30)....	Aug. 2	July 23
Rabia II (30)....	Sept. 1	Aug. 22
Jomada I (30)...	Sept. 30	Sept. 20
Jomada II (29)...	Oct. 30	Oct. 20
Rajab (30).....	Nov. 28	Nov. 18
Shaahan (29)....	Dec. 28	Dec. 18
Ramadan (30)...	1963 Jan. 26	1964 Jan. 16
Shawwal (29)....	Feb. 25	Feb. 15
Dulkaada (30)...	Mar. 26	Mar. 15
Dulheggia (29 or 30).....	April 25	April 14

NOTE.—A.H. 1384 (common year of 354 days) begins on 1964, May 13.

OTHER EPOCHS AND CALENDARS

China.—Until the year A.D. 1911 a Lunar Calendar was in force in China, but with the establishment of the Republic the Government adopted the Gregorian Calendar, and the new and old systems were used simultaneously by the people for several years. Since 1930 the publication and use of the old Calendar have been banned by the Government, and an official Chinese Calendar, corresponding with the European or Western system, is compiled, but the old Lunar Calendar is still in use to some extent in China. The old Chinese Calendar, with a cycle of 60 years, is still in use in Tibet, Hong Kong, Singapore, Malaya and elsewhere in South-East Asia.

Ethiopia.—In the Coptic Calendar, which is used by part of the population of Egypt and Abyssinia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is an intercalary or Leap year and in these years there are 6 complementary days. The intercalary year of the Coptic Calendar immediately precedes the Leap year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed at A.D. 284, Aug. 29 (Julian date).

Greece.—Ancient Greek chronology was reckoned in *Olympiads*, cycles of 4 years corresponding with the periodic Olympic Games held on the plain of Olympia in Elis once in 4 years, the intervening years being the first, second, etc., of the *Olympiad* which received the name of the victor at the Games. The first recorded *Olympiad* is that of Choroehus, 776 B.C.

India.—In addition to the Moslem reckoning there are six eras used in India. The principal astronomical system was the *Kaliyuga Era*, which appears to have been adopted in the fourth century A.D. It began on Feb. 18, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on Feb. 23, 57 B.C. The year A.D. 1963 is, therefore, the year 2020 of the *Vikrama Era*.

The *Saka Era* of Southern India dating from March 3, A.D. 78, was declared the uniform national calendar of the Republic of India with effect from March 22, 1957, to be used concurrently with the Gregorian Calendar. As revised, the year of the new *Saka Era* begins at the spring equinox, with five successive months of 31 days and seven of 30 days in ordinary years; six months of each length in leap years. The year A.D. 1963 is 1885 of the revised *Saka Era*.

In the Hills, the *Saptarshi Era* dates from the

moment when the Saptarshi, or saints, were translated and became the stars of the Great Bear in 3076 B.C.

The *Buddhists* reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the *Jains* was the death of Vardhamana, the founder of their faith, in 527 B.C.

Iran.—The chronology of Iran (Persia) is the Era of Hejira, which began on A.D. 622, July 15. The *Zoroastrian Calendar* was used in pre-Moslem days and is still employed by Zoroastrians in Iran and India (Parsees) with era beginning A.D. 632, June 16.

Japan.—The Japanese Calendar is the Gregorian, and is essentially the same as that in use by Western nations, the years, months and weeks being of the same length and beginning on the same days as those of the Western Calendar. The numeration of the years is different, for Japanese chronology is based on a system of epochs or periods, each of

which begins at the accession of an Emperor or other important occurrence, the method being not unlike the British system of Regnal years, but differing from it in the particular that each year of a period closes on Dec. 31. The Japanese scheme begins about A.D. 650 and the three latest epochs are defined by the reigns of Emperors, whose actual names are not necessarily used:—

Epoch Meiji from 1868 Oct. 13 to 1912 July 31
 " Taishō " 1912 Aug. 1 to 1926 Dec. 25
 " Shōwa " 1926 Dec. 26

Hence the year Shōwa 38 begins 1963 Jan. 1. The months are not named. They are known as First Month, Second Month, etc., first month being the equivalent to January. The days of the week are Nichiyōhi (Sun-day), Getsuyōhi (Moon-day), Kayōhi (Fire-day), Suiryōhi (Water-day), Mokuyōhi (Wood-day), Kinyōhi (Metal-day), Doyōhi (Earth-day).

EARTHQUAKES SINCE 1531

(Approximate numbers of persons killed appear in brackets.)

1531 Jan. 26	Portugal, Lishon (30,000).	1928 Dec.	Chile, Talca.
1556 Jan. 24	China, Shensi (830,000).	1930 July 23	Italy, Naples (2,142; injured 4,551).
1693 Jan. 11	Catania (60,000).	1931 Mar. 31	Nicaragua, Managua (Managua) destroyed.
1703 Dec. 30	Japan (200,000).		New Zealand.
1731 Oct.—Nov.	China.	Feb. 3	Mexico.
1737 Oct. 11	India, Calcutta (300,000).	1932 June 3	China.
1746	Peru.	1933 Sept. 19	Baluchistan, Quetta (Town destroyed) (60,000).
1754 Sept. 2	Egypt, Cairo.	1936	West Indies, Montserrat.
1755 Nov. 1	Portugal, Lisbon (60,000). Fire and tidal wave.	1937 June 2.	New Britain, Rabaul.
1783 Feb. 5—	Calabria (60,000). Followed until 1786 by further series of shocks (38 severe).	1938 April 19—20	Turkey, Anatolia.
Mar. 28		1939 Jan. 26	Chile (20,000). Dec.—Feb. 1940. Turkey, Anatolia (30,000).
1811	Madrid.	1950 May 21	Peru, Cuzco (100).
1819	Kutch.	July 8—9	Colombia (270).
1822	Syria, Aleppo (20,000). Chile.	Aug. 15	India, Assam (1,500).
1835	Chile.	1951 May 6	Salvador (1,000).
1857 Dec. 16	Naples, Salerno (12,000).	1953 Mar. 18	Turkey (266).
1859 Mar. 22	Ecuador, Quito.	Aug. 10	Greece, Ionian Islands (476).
1868 Aug. 13—15	Peru (25,000).	Sept. 10	Cyprus, Paphos (40).
1883 July—Aug.	Italy, Ischia.	1954 April 30 and	} Greece, Tbessaly (21).
1886 Aug. 31	U.S.A., Charleston.	May 12	
1891 Oct. 28	Japan, Mino Awari.	Sept. 9	Afghanistan (2,000).
1895	Ljubljana (Laihach).	1956 June 10—17	Persia, Luristan (350).
1895—1905	Japan. 257 earthquakes.	Nov. 4	Turkey, Fethiye (10).
1896	Japan, Sanikro. Krakatoa, with volcanic disturbance.	1957 April 24	Anatolia (26).
		May 26	Persia, Sangchal (180).
		July 2—11	Mexico (56).
		July 28	Mongolia (30).
		Dec. 4	Persia, Kermanshah, Hamadan and Sanandraj (1,306). 29 villages destroyed, including Farsinaj (950).
		Dec. 13	
1897 June 12	India, Assam.	1958 Aug. 16—21	Persia (191).
1899	Alaska, Yakutat Bay.	1960 Feb. 29	Morocco, Agadir. 12,000 killed in the total destruction of the town. Accompanied by a tidal wave.
1902	West Indies, Mont Pelée (20,000).	April 25	Persia, Lar and Herash (3,000).
1905	India, Kangra (20,000).	1960 May 21—25	Chile (5,000). Heavy destruction in Concepcion, Puerto Montt and on Chiloe Island. Accompanied by tidal waves and the eruption of 3 new volcanoes.
1906 April 18	U.S.A., California. Large part of San Francisco destroyed.		
Aug. 17	Chile, Valparaiso (2,500).		
1907 Jan. 17	Jamaica, Kingston.		
1908 Dec. 28	Italy, Messina (77,000).		
1909	Persia, Luristan.		
1911	Mexico.		
1923 Sept. 1—	Japan, Tokyo and Yokohama destroyed. Deaths 180,000; houses destroyed by fire, 447,128; by collapse, 128,266.		
1924 Jan. 15			
1926	Azores, Horta.		
1927	Herzegovina and Dalmatia.		
1927 Feb. 16	North Japan and Kamchatka.		
Mar. 7	Japan, Tadjima.		
July 11	Palestine.		

The World

THE *Superficial Area* of the Earth is estimated to be 196,836,000 square miles, of which 55,786,000 square miles are Land and 141,050,000 square miles Water. The *Diameter* of the Earth at the Equator is 7,926½ English miles, and at the Poles 7,900 English miles. The *Equatorial Circumference* is 24,901.8 English miles, divided into 360 Degrees of Longitude, each of 69.17 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

The velocity of a given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,901.8 miles in 24 hours); the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour (534,000,000 miles in 365½ days). The Earth is distant from the Sun 93,000,000 miles, on the average.

AREA AND POPULATION.

The total population of the world in June, 1960, was estimated by the *United Nations Statistical Year-book* at 2,995,000,000 and was estimated to have risen by a further 3.6 per cent. to 3,104,000,000 by June, 1961. Figures of areas in the following table are of land area and inland water, but exclude uninhabited polar regions and some uninhabited islands. Figures for Europe and Asia exclude U.S.S.R., which is shown separately. Figures for Oceania include Hawaii.

Continent, etc.	Area		Estimated Population, 1960
	Sq. miles '000	Sq. km. '000	
Europe....	1,912	4,953	427,000,000
Asia.....	10,397	26,928	1,697,000,000
U.S.S.R....	8,649	22,402	214,400,000
Africa....	11,695	30,290	254,000,000
America....	16,231	42,040	405,000,000
Oceania...	3,304	8,558	16,500,000
Total....	52,189	135,171	2,995,000,000

A United Nations report (*The Future Growth of World Population*) in 1958, pointed out that the population of the world had increased since the beginning of the 20th Century at an unprecedented rate: in 1850 it was estimated at 1,094,000,000 and in 1900 at 1,550,000,000, an increase of 42 per cent. in 50 years. By 1925 it had risen to 1,907,000,000—23 per cent. in 25 years—and by 1950 it had reached 2,500,000,000, an increase of 31 per cent. in 25 years. Levels of population and the trend in distribution of the population by continents as forecast for the years 1975 and 2000 were:—

(millions)

Continent	1975		2000

* Excluding U.S.S.R. † Mexico and the remainder of America south of U.S.A. ‡ Including U.S.S.R.

THE CONTINENTS.

Europe (including European Russia) forms about one-fourteenth of the land surface of the globe. Its length from the North Cape, 71° 12' N., to

Cape Matapan, in the south of Greece, 36° 23' N., is about 2,400 miles, and its breadth from Cape St. Vincent to the Urals is about 3,300 miles. The political boundary between Europe and Asia extends some distance beyond the Urals, to include the mining regions; in the south-east it follows the valley of the Manych, north of the Caucasus.

Asia (including Asiatic Russia) extends over nearly one-third of the land surface of the globe. The distance between its extreme longitudes, the west coast of Asia Minor (26° E.) and the East Cape (170° W.), is 6,000 miles. The extreme latitudes, Cape Chelyuskin (78° 30' N.) and Cape Bulul (76 miles north of the Equator), are 5,350 miles apart. Asia is bounded by the ocean on all sides except the west. The Isthmus of Suez connects it with Africa. The land boundary between Europe and Asia is formed on the west mainly by the Ural Mountains and the Ural River. In the south-west the valley of the Manych, which stretches from the Caspian Sea to the mouth of the Don, is now taken as the line between the two continents, although the Caucasus was formerly considered as belonging to Europe. The islands of the archipelago which lie in the south-east between the continents of Asia and Australia may be divided into two groups by a line passing east of Timor, Timor Laut, the Kei Islands and the Moluccas.

Africa is about three times the area of Europe, its extreme longitudes are 17° W. at Cape Verde and 51° 27' 52" E. at Ras Hafun. The extreme latitudes are Cape Blanco in 37° N. and Cape Agulhas in 35° S., at a distance of about 5,000 miles. It is surrounded by seas on all sides, except in the narrow isthmus through which is cut the Suez Canal, and may be considered as a great peninsula of the Eurasian continent.

North America, including Mexico, is a little less than twice the size of Europe. Its extreme longitudes extend from a little west of 170° W. to 52½° W. in the east of Newfoundland, and its extreme latitudes from about 80° N. lat. to 15° N. lat. in the south of Mexico. It is surrounded by seas on all sides except in the south, where it joins the Isthmian States of Central America, which have an area of about 200,000 square miles. The area of the *West Indies* is about 65,000 square miles, a little more than half that of the United Kingdom. They extend from about 27° N. latitude to 10° N. latitude.

South America is a little more than 1½ times the size of Europe. The extreme longitudes are Cape Branco 35° W. and Punta Parina 81° W., and the extreme latitudes, Punta Gallinas, 12½° N. and Cape Horn 56° S. South America is surrounded by the ocean, except where it is joined to Central America by the narrow isthmus through which is cut the Panama Canal.

Oceania extends over an area 1½ times the size of Europe, from Australia (in the West) to the most easterly islands of Polynesia, and from New Zealand (in the south) to the Sandwich Islands (Hawaii) in the north.

Area and Population of the World by Continents

The appended tables of area and population are based on such information as is immediately available.

With regard to areas it will be realized that no complete survey of many countries has yet been either achieved or even undertaken and that consequently accurate area figures are not available. In addition, among the results of the war of 1939-1945 is a readjustment of boundaries which have not yet been definitely settled. For the constituent parts of the United Kingdom and for the area and population of separate departments, overseas provinces, etc., of foreign countries, see main articles.

The populations given hereunder are derived from various sources; some have as their basis an authenticated census; some are official and some are unofficial estimates. In certain cases later information is given in the Dominions, Colonies or Foreign Countries Sections of the ALMANACK. What has been said about the survey of many of the world's countries applies equally to the question of census.

ASIA

The expressions "The Near East," "The Middle East" and "The Far East" often appear in the Press of English-speaking countries, but have no definite boundaries. The following limits have been suggested:—*Near East* (Turkey to Persia) 25°-60° E. long., *Middle East* (Baluchistan to Burma) 60°-100° E. long., *Far East* (Siam to Japan) 100°-160° long.

OCEAN AREAS AND DEPTHS

The greatest known Ocean Depth (in the Pacific, off the Philippines, 35,948 feet) is not much greater than the greatest land height (in the Himalayas); but the mean depth of the Ocean floor exceeds 12,000 feet, while the mean height of the surface of the land area of the Earth above sea level is only 2,300 feet. The following table gives the areas of the principal oceans and seas, with the greatest known depth of each:—

Oceans			Seas		
Name	Area of Basin (sq. miles)	Greatest Depth (feet)	Name	Area of Basin (sq. miles)	Greatest Depth (feet)
Pacific.....	63,986,000	Off Philippines, 35,948	Malay.....	3,137,000	Kei Trench, 21,342
Atlantic.....	31,530,000	Porto Rico Trench, 30,143	Central American.....	1,770,170	Cayman, 23,000
Indian.....	28,350,000	Sunda Trench, 22,968	Mediterranean... ..	1,145,000	Matapan, 14,435
Arctic.....	5,541,600	17,850	Behring.....	878,000	Buldir Trough, 13,422
			Okhotsk.....	582,000	Kurile Trough, 11,151
			East China.....	480,000	about 10,500
			Hudson Bay.....	472,000	about 1,500
			Japan.....	405,000	about 10,200
			Andaman.....	305,000	about 11,000
			North Sea.....	221,000	Skaggerak, 1,993
			Red Sea.....	178,000	20° N., 7,251
			Baltic.....	158,000	about 1,300

THE SEVEN WONDERS OF THE WORLD

- I. THE PYRAMIDS OF EGYPT.—From Gizeh (near Cairo) to a southern limit 60 miles distant. The oldest is that of Zoser, at Saggara, built about 3,000 B.C. The Great Pyramid of Cheops covers more than 12 acres and was originally 481 ft. in height and 756 × 756 ft. at the base.
- II. THE HANGING GARDENS OF BABYLON.—Adjoining Nebuchadnezzar's palace, 60 miles south of Baghdad. Terraced gardens, ranging from 75 to 300 ft. above ground level, watered from storage tanks on the highest terrace.
- III. THE TOMB OF MAUSOLUS.—At Halicarnassus, in Asia Minor. Built by the widowed Queen Artemisia about 350 B.C. The memorial originated the term mausoleum.
- IV. THE TEMPLE OF DIANA AT EPHEBUS.—A marble temple designed by Ctesiphon and erected by cities of Ionia in honour of the goddess about 480 B.C.
- V. THE COLOSSUS OF RHODES.—A bronze statue of Apollo, set up about 280 B.C. with legs astride the harbour entrance at the seaport of Rhodes.
- VI. THE STATUE OF JUPITER OLYMPUS.—At Olympia in the plain of Elis, constructed of marble inlaid with ivory and gold by the sculptor Phidias, about 430 B.C.
- VII. THE PHAROS OF ALEXANDRIA.—A marble watch tower and lighthouse on the island of Pharos in the harbour of Alexandria.

DISTANCE OF THE HORIZON

THE limit of distance to which one can see varies with the height of the spectator. The greatest distance at which an object on the surface of the sea, or of a level plain, can be seen by a person whose eyes are at a height of 5 feet from the same level is nearly 3 miles. At a height of 20 feet the range is increased to nearly 6 miles, and an approximate rule for finding the range of vision for small heights is to increase the square root of the number of feet that the eye is above the level surface by a third of itself, the result being the distance of the horizon in miles, but is slightly in excess of that in the table below, which is computed by a more precise formula. The table may be used conversely to show the distance of an object of given height that is just visible from a point in the surface of the earth or sea. Refraction is taken into account both in the approximate rule and in the Table.

At a height of	the range is	At a height of	the range is	At a height of	the range is
5 ft.	2.9 miles	500 ft.	29.5 miles	4,000 ft.	83.3 miles

PRESIDENTS OF THE FRENCH REPUBLIC

	Acceded
Committee of Public Defence	4 Sept. 1870
Louis Adolphe Thiers	31 Aug. 1871
Marshal MacMahon	24 May, 1873
Jules Grévy	30 Jan. 1879
Sadi Carnot (assass.: 14 June, 1894)	3 Dec. 1887
Jean Casimir Périer	27 June, 1894
François Félix Faure	17 Jan. 1895
Emile Loubet	18 Feb. 1899
Armand Fallières	18 Jan. 1906
Raymond Poincaré	17 Jan. 1913
Paul Deschanel	18 Feb. 1920
Alexandre Millerand	20 Sept. 1920
Gaston Doumergue	13 June, 1924
Paul Doumer (assass.: 7 May, 1934)	13 June, 1931
Albert Lebrun (deposed 1940)	10 May, 1932
Maréchal Pétain, "Vichy" nominee,	11 July, 1940

[After the liberation of Paris, General Charles de Gaulle entered the capital and formed a provisional government on Sept. 10, 1944. This was regarded as a continuation of the *Third Republic*. De Gaulle was named provisional President. He resigned and was succeeded by Félix Gouin on Jan. 23, 1946. A new National Assembly was elected and on June 2, 1946, Gouin resigned and was succeeded by Georges Bidault.

A new Constitution (*Fourth Republic*), adopted on Oct. 13, 1946, and amended in 1954, was in force until 1958.]

	Acceded
Vincent Auriol, born 1884	Jan. 16, 1947
René Coty, born 1882	Jan. 17, 1954

[The *Fifth French Republic* came into being on October 5, 1958, following the approval of its constitution by a national referendum in September, 1958.]

Charles de Gaulle, born 1890	Jan. 8, 1959

WELSH SOVEREIGNS AND PRINCES

WALES was ruled by Sovereign Princes from the "earliest times" until the death of Llywelyn in 1282. The first English Prince of Wales was the son of Edward I, and was born in Caernarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfilment of a promise that they should have a Prince who "could not speak a word of English" and should be native born. This son, who afterwards became Edward II, was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, 1301. The title Prince of Wales is borne after individual conferment and is not inherited at birth; it was conferred on Prince Charles by Her Majesty the Queen on July 26, 1958.

H.R.H. PRINCESS MARGARET ROSE (The Princess Margaret, Countess of Snowdon), C.I., G.C.V.O., Colonel-in-Chief, 15th-19th The King's Royal Hussars, 1st East Anglian Regiment (Royal Norfolk and Suffolk), The Royal Highland Fusiliers (Princess Margaret's Own Glasgow and Ayrshire Regiment), Queen Alexandra's Royal Army Nursing Corps, Women's Royal Australian Army Corps, Commandant-in-Chief, St. John Ambulance Brigade Cadets, Dame Grand Cross of the Order of St. John of Jerusalem, Commodore Sea Ranger Section of the Girl Guides Association; born at Glamis Castle, Angus, Scotland, Aug. 21, 1930; married May 6, 1960, Antony Charles Robert Armstrong-Jones (born March 7, 1930), son of Ronald Armstrong-Jones, Q.C. and the Countess of Rosse, created Earl of Snowdon, 1961, and has issue, David Albert Charles, Viscount Linley, born Nov. 3, 1961.

Residence.—Kensington Palace, W.8.

ORDER OF SUCCESSION TO THE THRONE

The Queen's sons and daughter are in the order of succession to the throne, and after the Princess Margaret and her son, the Duke of Gloucester and his sons; then the Duke of Kent, his son, his brother and his sister; then the Princess Royal, her elder son and his sons and her younger son and his son; then The Duke of Fife, son of the late Countess of Southesk; then King Olav of Norway and his children, then the children of the

second daughter of the late Duke of Saxe-Coburg (his eldest daughter, the late Queen Marie of Roumania, having formally renounced on her marriage all possibility of claim to the British Throne); then the children of the third daughter (the late Princess Alixandra of Hohenlohe-Langenburg); then the children of the eldest son of the late Princess Margaret of Connaught (Crown Princess of Sweden), her other sons and her daughter (Queen Ingrid of Denmark) and her children; then the younger daughter of the first Duke of Connaught and Strathearn (Lady Patricia Ramsay) and her son; then the Princess Alice (Countess of Athlone) and her daughter and grandchildren. Having thus exhausted the families of all Queen Victoria's sons we turn to her daughters, beginning with the house of the late Empress Frederick, but as this line is wholly out of practical bounds it would be profitless to pursue the investigation any further.

Precedence in England

The Sovereign.	Viscounts' eldest Sons.	Companions and Commanders e.g. C.B.; C.S.I.; C.M.G.; C.L.E.; C.V.O.; C.B.E.; D.S.O.; M.V.O. (4th); O.B.E.; I.S.O.
The Prince Philip, Duke of Edinburgh	Earls' younger Sons.	Eldest Sons of younger Sons of Peers.

Bishops of London, Durham and Winchester.	Knights Bachelor.	
All other English Bishops, accord- ing to their seniority or Con- secration.	Official Referees of The Supreme Court.	
Secretaries of State, if of the degree of a Baron.	Judges of County Courts and Judges of the Mayor's and City of London Court.	
Barons, in same order as Dukes	Masters in Lunacy.	
Treasurer of H.M.'s Household.		
Comptroller of H.M.'s House- hold.		
Vice-Chamberlain of H.M.'s Household.		
Secretaries of State under the degree of Baron		

WOMEN

Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedence as that of their husbands; thus the daughter of a Duke marrying a Baron becomes of the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife.

For Dames Grand Cross and Dames Commanders, *see* pp. 296-7.

LOCAL PRECEDENCE

ENGLAND AND WALES.—No written code of county or city order of precedence has been promulgated, but in Counties the Lord Lieutenant stands first, and secondly the Sheriff, and therefore in Cities and Boroughs the Lord Lieutenant has social precedence over the mayor; but at City or Borough functions the Lord Mayor or Mayor will preside. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.

SCOTLAND.—*See* Index.

CORONATION DATES, 1714-1953

Sovereign.	Accession.	Coronation.
George I.	Aug. 1, 1714	Oct. 20, 1714
George II.	Jun. 12, 1727	Oct. 11, 1727
George III.	Oct. 25, 1760	Sept. 22, 1761
George IV.	Jan. 29, 1820	July 29, 1821
William IV.	June 26, 1830	Sept. 8, 1831
Victoria.	June 20, 1837	June 28, 1838
Edward VII.	Jan. 22, 1901	Aug. 9, 1902
George V.	May 6, 1910	June 22, 1911
Edward VIII.	Jan. 20, 1936	..
George VI.	Dec. 11, 1936	May 12, 1937
Elizabeth II.	Feb. 6, 1952	June 2, 1953

ANNUITIES TO THE ROYAL FAMILY

The annuities payable to Her Majesty are known as the *Civil List*, which is granted by Parliament upon the recommendation of a Select Committee. The Civil List of King George VI amounted to £410,000. A Select Committee appointed to consider the Civil List in May, 1952, made the following recommendations, which were embodied in the Civil List Consolidated Fund (Appropriation) Act, which received the Royal Assent on Aug. 1. The annual provision made for Her Majesty the Queen and other members of the Royal Family under the Acts of 1937 and 1952 is as follows:—

Her Majesty's Privy Purse	£60,000	Queen Elizabeth the Queen Mother ..	£70,000
Salaries of Household	185,000	The Duke of Edinburgh	40,000
Expenses of Household	121,800	The Duke of Gloucester	35,000
Royal Bounty, alms and special services	13,200	The Princess Margaret	15,000
Supplementary Provision	95,000	The Princess Royal	6,000

£475,000

These payments are separately charged on the Consolidated Fund, and do not form part of the Civil List.

THE UNION JACK

Days for hoisting the Union Flag on Government and Public Buildings (from 8 A.M. to sunset).

February 6 (1952).—Her Majesty's Accession.

February 29 (1960).—Birthday of Prince Andrew.

March 12.—St. David's Day (in Wales only).

March 31 (1900).—Birthday of Duke of Gloucester.

April 21 (1926).—Birthday of Her Majesty the Queen.

April 23.—St. George's Day (in England only). Where a building has two or more flagstaffs the Cross of St. George may be flown in addition to the Union Jack but not in a superior position.

April 25 (1897).—Birthday of the Princess Royal.

May 24.—Commonwealth Day.

June 2 (1953).—Coronation Day.

June 8.—Queen's Official Birthday, 1963.

June 10 (1921) Birthday of the Duke of Edinburgh.

Aug. 4 (1900).—Birthday of Her Majesty Queen Elizabeth the Queen Mother.

Aug. 15 (1950).—Birthday of the Princess Anne.

Aug. 21 (1930).—Birthday of the Princess Margaret.

Nov. 10.—Remembrance Sunday, 1963.

Nov. 14 (1948).—Birthday of the Prince of Wales.

Nov. 20 (1947).—Her Majesty's Wedding Day.

Nov. 30.—St. Andrew's Day (in Scotland only).

And on the occasion of the opening and closing of Parliament by the Queen, flags should be flown on public buildings in the Greater London area, whether or not Her Majesty performs the ceremony in person.

The only additions to the above list will be those notified to the Ministry of Works by Her Majesty's command and communicated by the Ministry to

the other Departments. The list applies equally to Government and Public Buildings in London and elsewhere in the United Kingdom. In cases where it has been the practice to fly the Union Jack daily, e.g. on some Custom Houses, that practice may continue.

Flags will be flown at half-mast on the following occasions:—

(a) From the announcement of the death up to the funeral of the Sovereign, except on Proclamation Day, when they are hoisted right up from 11 a.m. to sunset.

(b) The funerals of members of the Royal Family, subject to special commands from Her Majesty in each case.

(c) The funerals of Foreign Rulers, subject to special commands from Her Majesty in each case.

(d) The funerals of Prime Ministers and ex-Prime Ministers of the United Kingdom.

(e) Other occasions by special command of Her Majesty.

On occasions when days for flying flags coincide with days for flying flags at half mast the following rules will be observed. Flags will be flown: (a) although a member of the Royal Family, or a near relative of the Royal Family, may be lying dead, unless special commands be received from Her Majesty to the contrary, and (b) although it may be the day of the funeral of a Foreign Ruler. If the body of a very distinguished subject is lying at a Government Office the flag may fly at half mast on that office until the body has left (provided it is a day on which the flag would fly) and then the flag is to be hoisted right up. On all other Public Buildings the flag will fly as usual.

The *Royal Standard* is only to be hoisted when the Queen is actually present in the building, and never when Her Majesty is passing in procession.

RED-LETTER DAYS

Scarlet Robes are worn by the Judges of the Queen's Bench Division on *Red-Letter Days*: at the sittings of a Criminal Court or of the Court of Criminal Appeal and on all State Occasions.

RED-LETTER DAYS AND STATE OCCASIONS, 1963.

	May 1.	St. Philip and St. James.	Aug. 4.	Birthday of Queen Elizabeth the Queen Mother.

" 25.				

THE MILITARY KNIGHTS OF WINDSOR

Founded in 1348 after the Wars in France to assist English Knights, who, having been prisoners in the hands of the French, had become impoverished by the payments of heavy ransoms. They received a pension and quarters in Windsor Castle. Edward III founded the Order of the Garter later in the same year, incorporating the Knights of Windsor and the College of St. George into its foundation and raising the number of Knights to 26 to correspond with the number of the Knights of the Garter. Known later as the Alms Knights or Poor Knights of Windsor, their establishment was reduced under the will of King Henry VIII to 13 and the Statutes by which they are still governed were drawn up by Queen Elizabeth I.

In 1833 King William IV changed their designation to The Military Knights and granted them their present uniform which consists of a scarlet coat with white cross sword-belt, crimson sash and cocked hat with plume. The badges are the Shield of St. George and the Star of the Order of the Garter. The Knights receive a small stipend in addition to their Army pensions and quarters in Windsor Castle. They take part in all ceremonies of the Noble Order of the Garter and attend Sunday morning service in St. George's Chapel as representatives of the Knights of the Garter.

Applications for appointment should be made to The Military Secretary, The War Office.

Governor, Maj.-Gen. Edmund Hakewell Smlth, C.B., C.B.E., M.C.

Military Knights, Lt.-Colonel R. Pennell, D.S.O.; Lt.-Colonel C. L. Hodgson; Major H. K. Clough, O.B.E.; Colonel A. H. W. Haywood, C.M.G., C.B.E., D.S.O.; Lt.-Colonel L. W. La T. Cockcroft, D.S.O., M.V.O.; Lt.-Colonel J. M. Mackenzie, D.S.O.; Lt.-Colonel L. Holbech, C.V.O., D.S.O., O.B.E., M.C.; Lt.-Colonel R. F. Squibb, M.C.; Brigadier E. K. B. Furze, D.S.O., O.B.E., M.C.; Lt.-Colonel E. P. O. Boyle, M.V.O.; Brigadier W. P. A. Robinson, M.C.

The Peerage §

THE PEERAGE AND ITS DEGREES

The rules which govern the arrangements of the Peerage are marked by so many complications that even an expert may occasionally be perplexed. All Peers of England are Peers of Parliament. In Scotland and Ireland there are Peerages of equally long standing and upon the successive Unions of those two Kingdoms with the Kingdom of England a certain number of Scottish and Irish Peers received titles in the Peerage of Great Britain, or of the United Kingdom, carrying the right of summons to the House of Lords.

All Peers of Parliament up to June 20, 1707, are classed as Peers of England and rank before all others of like degree; from that date to December 31, 1800, all fresh creations either in England or in Scotland were called Peers of Great Britain, and creations from January 1, 1801, onwards, either in Great Britain or Ireland, are known as Peers of the United Kingdom, save only that the Sovereign retains the power to create one new Peer of Ireland for every three Irish Peerages of older date than the Union which have become extinct. In 1868 the Barony of Rathdonnell was so created and in 1898 that of Curzon of Kedleston, the latter being designed to permit the holder (who was Viceroy of India from 1893 to 1905) to return to the House of Commons instead of entering the House of Lords.

From the date of the Union with Scotland 16 Scottish Peers, not entitled to sit in the House of Lords by virtue of a British or United Kingdom Peerage, are elected as Representative Peers for the duration of each Parliament.

No Peer of England, Scotland, Great Britain or of the United Kingdom can be elected a Member of the House of Commons, but an Irish Peer who holds no title carrying the right to sit in the House of Lords can be so elected for any constituency out of Ireland itself, but while he sits as a Member of the Commons he loses his privileges as a Peer. Viscount Palmerston, so long M.P. for Tiverton, was an eminent example.

No Fees for Dignities have been payable since 1937.

PEERAGES CREATED SINCE THE LAST ISSUE

EARLS (2)—Kilmuir; Snowdon.

VISCOUNTS (2)—Mills; Radcliffe.

BARONS (10)—Aldington; Brain; Devlin (Life Peerage); Dilhorne; Eccles; Inchyra; Lambury; Leighton of St. Mellons; Mabane; Pearce (Life Peerage).

For Life Peers created under the Life Peerages Act, 1958, see p. 246.

PEERAGES EXTINCT SINCE THE LAST ISSUE

VISCOUNTIES (2)—Crookshank (cr. 1956); Fitzalan of Derwent (cr. 1921).

BARONIES (5)—Dalton (cr. 1960)*; Merriman (cr. 1941); Pethick-Lawrence (cr. 1945); Quibell (cr. 1945); Robins (cr. 1958).

* Life Peerage created under Life Peerage Act, 1958.

PEERS WHO ARE MINORS

(As at Jan. 1, 1963)

THE PRINCE OF WALES (Duke of Cornwall) (*b.* 1948).

EARLS (3): Belmore (*b.* 1951); Chichester (*b.* 1944); Kingston (*b.* 1943).

VISCOUNT (1): Torrington (*b.* 1943).

BARONS (3): Hesketh (*b.* 1950); O'Hagan (*b.* 1945); Sysonby (*b.* 1945).

The following Peers will come of age during 1963:—

VISCOUNTS (2): Selby (Aug. 15); Ullswater (Jan. 9).

	Hereditary	Peersse.	Minors	Without seat	Life or a Term	In House of Lords
Royal Dukes	5	..	1	4
Archbishops	2	2
Dukes	27	1	27
Marquesses	33	1	..	37
Earls	205	5	3	14	9	178
Viscounts	140	..	3	15	..	149
Bishops	17	24	21
Barons	527	13	3	37	63	533
Total	542	18	10	94	99	924

Note.—This table will not cross check, as Irish and Scottish Representative Peers are included both as Hereditary Peers and as Peers for Life or a Term.

Peeresses in Their Own Right

Peerages are occasionally granted immediately to ladies of distinction or the widows of distinguished men; but frequently the instances falling under this heading are the result of regular inheritance in lines which are open to females in default of males. A Peeress in her Own Right retains her title after marriage, and if her husband's rank is the superior she is designated by the two titles jointly, the inferior one last: her hereditary claim still holds good in spite of any marriage whether higher or lower. No rank held by a woman can confer any title or even precedence upon her husband but the rank of a Peeress in her Own Right is inherited by her eldest son (or perhaps daughter), to whomsoever she may have been married.

COUNTESSSES IN THEIR OWN RIGHT.—*Style*, The Countess of —
Addressed as, My Lady.

Created.	Title, Name, etc.	Eldest Son or Heir.

* Life Peer created under Life Peerages Act, 1958.

Courtesy Titles (in actual use in 1963)

Holders of Courtesy Titles are addressed in the manner shown for holders of substantive titles

From this list it will be seen that the "Marquess of Blandford" is the heir to the Dukedom of Marlborough and the "Earl of Aboyne" to the Marquessate of Huntly, and "Viscount Acheson" heir to the Earldom of Gosford; *the titles of second heirs are also given; e.g. Earl of Offaly, son of the "Marquess of Kildare" heir to the Dukedom of Leinster.

∴ In addition to these Titles of Courtesy the eldest son of some Scottish peers is usually styled "The Master of —" e.g. "The Master of Falkland," eldest son of Viscount Falkland.

CONTRACTIONS AND SYMBOLS

Contractions and Symbols.—s, or l, appended to the date of creation denotes a Scottish or Irish title, the further addition of a * implies that the Peer in question holds also an Imperial title, which is specified (after the name) by its more definite description as *Engl., Brit., or U.K.* When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the imperial creation. R, indicates that the Peer is a representative peer for Scotland. The mark * signifies that there is no "of" in the Marquessate or Earldom so designated; b, signifies born; s, succeeded; m., married; w., widower or widow; M., minor.

Her Majesty's Most Honourable Privy Council

The Privy Council is of very ancient origin. A Council, the number of which was about twelve, was instituted by Alfred, 895, and it discharged the functions of State now confined to members of the Cabinet. In the Middle Ages the chief advisers of the King who were permanently about him formed the Privy Council. Having become unwieldy, it was reconstituted in 1679. At present it consists of certain eminent persons whose names are given below. Members of the Cabinet must be Privy Councillors, and they principally form the acting Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, e.g., the Judicial Committee, the Board of Trade, &c. The Lord President of the Council is one of the Great Officers of State, and as such is always a prominent member of the Cabinet.

Deputy Clerk of the Council, E. N. Landale.

THE PREFIX RIGHT HONOURABLE

"Right Honourable."—By long established custom, or courtesy, members of Her Majesty's Most Honourable Privy Council are entitled to be designated "The Right Honourable," but, in practice, this prefix is sometimes absorbed in other designations; for example, a Prince of the Blood admitted a Privy Councillor remains "His Royal Highness"; a Duke remains "His Grace"; a Marquess is still styled "Most Honourable". The style of all other Peers, whether Privy Councillors or not, is "Right Honourable", although it is more usual to describe them with the prefix "The", omitting the more elaborate styles. A Privy Councillor who is not a Peer should be addressed as The Right (or Rt.) Hon. —. A Peer below the rank of Marquess who is a Privy Councillor should be addressed as The Right (or Rt.) Hon. the Lord (or Earl or Viscount) —, P.C., or, less elaborately, The Lord (or Earl or Viscount) — P.C.

THE DISTINGUISHED SERVICE ORDER (1886)—D.S.O.

Ribbon, Red, with Blue Edges.

Bestowed in recognition of especial services in action of commissioned officers in the Navy, Army and Royal Air Force and (1942) Mercantile Marine. The members are Companions only and rank immediately before the 4th Class of the Royal Victorian Order. A bar may be awarded for any additional act of service.

THE IMPERIAL SERVICE ORDER (1902, enlarged 1912)—I.S.O.

Ribbon, Crimson, with Blue Centre.

Restricted to members of the administrative or clerical (clerk) branches of the Civil Service and consists of the Sovereign and Companions (not exclusively male) to a number not exceeding 100, of whom 500 may belong to the Home Services, 100 to the services of Dominions and 200 to the services of the Colonies and Protectorates.

OTHER PRINCIPAL DECORATIONS AND MEDALS (in order of Precedence)

- Victoria Cross.—1856.— See pp. 298-301.

THE ROYAL ORDER OF VICTORIA AND ALBERT (for Ladies)—V.A.

Instituted in 1862, and enlarged in 1864, 1865, and 1880, but no conferments have been made since 1902. Badge, in the first three Classes a medallion of Queen Victoria and the Prince Consort, differing in the width and jewelling of the border as the Classes descend, whilst the fourth substitutes a jewelled cipher. All four are surmounted by a crown, which is attached to a bow of white moiré ribbon. The honour does not confer any rank or title upon the recipient.

FIRST CLASS.

Princess Wilhelmina of the Netherlands.

SECOND CLASS.

H.R.H. the Princess Alice, Countess of Athlone.
H.R.H. the Princess Alfonso

d'Orleans-Bourbon (the Infanta Beatrix of Spain).
Lady Victoria Patricia Helena Ramsay.

THE IMPERIAL ORDER OF THE CROWN OF INDIA (for Ladies)—C.I.

Instituted January 1, 1878. Badge, the royal cipher in jewels within an oval, surmounted by an Heraldic Crown and attached to a how of light blue watered ribbon, edged white. The honour does not confer any rank or title upon the recipient. No conferrals have been made since 1948.

H.M. THE QUEEN, 1947.

H.M. Queen Elizabeth the Queen Mother, 1931.

H.R.H. the Princess Margaret, Countess of Snowdon, 1947.

H.R.H. the Princess Royal, 1919.

H.R.H. the Duchess of Gloucester, 1937.

H.R.H. Princess Marina, Duchess of Kent, 1937.

H.H. Maharani Sahah Chimna Bai Gaekwar of Baroda, 1892.

Lady Victoria Patricia Helena Ramsay, 1911.

Margaret Etienne Hannah, Marchioness of Crewe, 1911.

Dorothy Evelyn Augusta, Countess of Halifax, 1926.

Pamela, Countess of Lytton, 1927.

H.H. Maharani Regent of Travancore, 1929.

Doreen Maud, Marchioness of Linlithgow, 1936.

Doreen Geraldine, Dowager Baroness Brahourne, 1937.

Eugenie Marie, Countess Wavell, 1943.

Florence Amery, 1945.

H.H. Maharani Tara Devi of Jammu and Kashmir, 1946.

Agnes Anne, Baroness Clydesmuir, 1948.

Baronets, Knights Grand Cross, Knights Grand Commanders, Knights Commanders and Knights Bachelor

Badge of Baronets
of England, Great Britain, U.K.
(and Ireland marked I.)

Badge of Baronets
of Scotland or Nova Scotia
(marked S.)

NOTES CONCERNING BARONETS

Clause II. of the Royal Warrant of February 8, 1910, ordains as follows:—"That no person whose name is not entered upon the Official Roll shall he received as a Baronet, or shall he addressed or mentioned by that title in any Civil or Military Commission, Letters Patent or other official document." When an obelisk (†) precedes a name it indicates that, at the time of going to press, the Baronet concerned has not been registered on the Official Roll of the Baronetage. The date of creation of the Baronetcy is given in parenthesis ().

Baronets are addressed as "Sir" (with Christian name) and in writing as "Sir Robert A—, Bt." Baronets' wives are addressed (formally) as "Your Ladyship" or "Lady A—," without any Christian name unless a daughter of a Duke, Marquess or Earl, in which case "The Lady Mary A—"; if daughter of a Viscount or Baron "The Hon. Lady A—."

NOTES CONCERNING KNIGHTS GRAND CROSS, ETC.

Knights Grand Cross, Knights Grand Commanders and Knights Commander: are addressed in the same manner as Baronets (*q.v.*), but in writing the appropriate initials (G.C.B., K.C.B., &c.) are appended to surname in place of "Bt." Knights Bachelor are addressed as "Sir — (first or Christian name)" and in writing as "Sir A— B—." The wife of a Knight Grand Cross, Knight Grand Commander, Knight Commander or Knight Bachelor is addressed as stated for the wife of a Baronet.

NOTES CONCERNING KNIGHTS BACHELOR

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I. in the 17th century, lapsed, and in 1908 a voluntary Association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight. In 1926 a design for a badge to be worn by Knights Bachelor was approved and adopted, a miniature reproduction being shown above. The Officers of the Society are:—*Knights Principal*, Sir Anthony Wagner, K.C.V.O., *Deputy Knight Principal*, Hon. Sir George Bellew, K.C.B., K.C.V.O.; *Hon. Registrar*, Sir John Weir Russell; *Clerk*, Mrs. Rodney; *Registry and Library*, 21 Old Buildings, Lincoln's Inn, W.C.1.

BARONETAGE AND KNIGHTAGE

(Revised to Aug. 14, 1962)

Peers are not included in this list

A full entry in italic type indicates that the recipient of a Knighthood died during the year in which the honour was conferred. The name is included for purposes of record.

Baronetries Extinct (Since last issue)—

Cornwall (G.B. 1764); Madge (U.K. 1919); Paul of Paulville (I. 1794); Peyton (G.B. 1776); Pollock of Edinburgh (U.K. 1939); Saunders-Pryse (U.K. 1866); Savory (U.K. 1890).

Baronetries Created—

Hooper; Jephcott; Lindsay; Scott of Rotherfield; Touche of Dorking; Wakefield; Waley-Cohen; Wolfson.

Dames Grand Cross and Dames Commanders of the Royal Victorian Order and of the Order of the British Empire

NOTE.—Dames Grand Cross (G.C.V.O. or G.B.E.) and Dames Commanders (D.C.V.O. or D.B.E.) are addressed in a manner similar to that of Knights Grand Cross or Knights Commanders, e.g. "Miss Florence Smith," after receiving the honour would be addressed as "Dame Florence," and in writing, as "Dame Florence Smith, G. (or D.) C.V.O., or G. (or D.) B.E." Where such award is made to a lady already in enjoyment of a higher title the appropriate letters are appended to her name, e.g. "The Countess of —, G.C.V.O." Dames Grand Cross rank after wives of Baronets and before wives of Knights Grand Cross. Dames Commanders rank after the wives of Knights Grand Cross and before the wives of Knights Commanders.

DAMES GRAND CROSS AND DAMES COMMANDERS

A. F. Thelwell.
The Omukama of Toro.
Lt.-Col. R. B. Verdin.
William Watson.
Prof. G. S. Wilson.
R. M. Wilson, Q.C.

THE VICTORIA CROSS. VC

The ribbon is *Crimson* for all Services (until 1918 it was *Blue* for Royal Navy).

FOR CONSPICUOUS BRAVERY. INSTITUTED *January 29th, 1855.*

The VC is worn before all other decorations, on the left breast, and consists of a cross-pattee of bronze, 1½ inches in diameter, with the Royal Crown surmounted by a lion in the centre, and beneath there is the inscription "For Valour." Holders of the VC receive a tax-free annuity of £100, irrespective of need or other conditions. In 1921, the right to receive the Cross was extended to Indian soldiers, and in 1920 a Royal Warrant extended the right to Matrons, Sisters and Nurses, and the Staff of the Nursing Services and other services pertaining to Hospitals and Nursing, and to Civilians of either sex regularly or temporarily under the orders, direction or supervision of the Naval, Military or Air Forces of the Crown.

THE GEORGE CROSS, G.C.

The ribbon is dark blue threaded through a bar adorned with laurel leaves

FOR GALLANTRY

INSTITUTED September 24th, 1940 (with amendments, November 3rd, 1942)

The George Cross is worn before all other decorations (except the *VC*) on the left breast § and consists of a plain silver cross with four equal limbs, the cross having in the centre a circular medallion bearing a design showing St. George and the Dragon. The inscription "For Gallantry" appears round the medallion and in the angle of each limb of the cross is the Royal cypher "G VI" forming a circle concentric with the medallion. The reverse is plain and bears the name of the recipient and the date of the award. The cross is suspended by a ring from a bar adorned with laurel leaves on dark blue ribbon $\frac{1}{2}$ inches wide.

The cross is intended primarily for civilians and awards to the fighting services are confined to actions for which purely military honours are not normally granted. It is awarded only for acts of the greatest heroism or of the most conspicuous courage in circumstances of extreme danger.

§ When worn by a woman it may be worn on the left shoulder from a ribbon of the same width and colour fashioned into a bow.

Empire Gallantry Medal.—The Royal Warrant which ordained that the grant of the Empire Gallantry Medal should cease authorized holders of that medal to return it to the Central Chancery of the Order of Knighthood and to receive in exchange the George Cross. A similar provision applied to posthumous awards of the Empire Gallantry Medal made after the outbreak of war in 1939.

THE GRAND PRIORY IN THE BRITISH REALM OF THE MOST VENERABLE ORDER OF THE HOSPITAL OF ST. JOHN OF JERUSALEM

(INCORPORATED MAY 14, 1888, WITH ADDENDA 1888, 1890, 1907, 1926, 1955 and 1958), St. John's Gate, Clerkenwell, E.C.1.

Sovereign Head H.M. the Queen.
Grand Prior H.R.H. The Duke of Gloucester,
 K.G., P.C., K.T., K.P., G.M.B., G.C.M.G.,
 G.C.V.O.

Lord Prior The Lord Wakehurst, K.G., K.C.M.G.

The Order had its origin in Jerusalem where a hospice for the relief of Christian pilgrims was founded in the eleventh century. Initially a monastic order, it later became militarized and its Knights fought alongside the Crusaders against the spread of Islam. After the loss of the Holy Land, the Order became sovereign in Rhodes and then in Malta. Like other ancient Orders of Chivalry, the Order of St. John was represented in most European countries, though its Priorities in England and Scotland were dissolved at the same time as the monasteries. The Order was expelled from Malta by Napoleon in 1798 and the Grand Magistracy eventually settled in Rome.

In 1827 the Knights of France, with the authority of the Grand Magistracy, assisted in the revival of what is now the Grand Priory in the British Realm of the Most Venerable Order of the Hospital of St. John of Jerusalem, whose Chancery is at St. John's Gate, the surviving gatehouse of the former Priory of England in Clerkenwell. A Royal Charter was granted to the Order in 1888 by Queen Victoria, and the first Grand Prior was King Edward VII, while Prince of Wales. The Badge is a white eight-pointed cross, embellished in alternate angles with a lion and an unicorn; the riband is of black watered silk. By a Royal Charter of March 15, 1955, members are divided into six grades:—(1) Balliffs and Dames Grand Cross; (2) Knights and Dames of Justice and of Grace; (3) Commanders; (4) Officers; (5) Serving Brothers and Sisters; and (6) Esquires. The Chaplains of the Order form a special class, taking precedence between the Knights and Commanders. A notification of these distinctions having been conferred appears in the London Gazette, but they do not confer any rank, title or precedence.

The work of the Order consists of the maintenance of its three Foundations—The Ophthalmic Hospital in Jerusalem (founded 1882); The St. John Ambulance Association, which is concerned with education in First Aid and kindred subjects; and the St. John Ambulance Brigade, the main object of which is to provide trained personnel for attendance on the public where the rendering of First Aid may be required.

The British Constitution

THE EXECUTIVE

The Crown (the Queen in Council) "makes peace and war, issues charters, increases the peerage, is the fountain of honour, of office, and of justice." The Sovereign entrusts the executive power to Ministers of the Crown, appointed on the advice of the accredited leader of the party in Parliament which enjoys, or can secure, a majority of votes in the House of Commons.

The Cabinet

The Cabinet has no corporate existence, but under the *Ministers of the Crown Act (1937)*, provision is made for 17 Ministers of the first rank (Cabinet Ministers) of whom not more than 15 may be members of the House of Commons. The *Ministers of the Crown (Parliamentary Secretaries) Act (1960)* laid down aggregate limit of 33 Parliamentary Secretaries.

The Prime Minister

The Prime Minister is appointed by the Sovereign. When a party is in opposition and its leadership becomes vacant it makes its free choice among the various personalities available; but if the party is in office, the Sovereign's choice may anticipate, and in a certain sense forestall, the decision of the party. In 1905 the office of Prime Minister, which had been in existence for nearly 200 years, was officially recognized and its holder was granted a place in the Table of Precedence.

The Leader of the Opposition

In 1937 the office of Leader of the Opposition was similarly recognized and a salary of £2,000 per annum was assigned to the post, thus following a practice which had prevailed in the Dominion of Canada since 1906. In 1957 the salary was increased to £3,000.

THE PRINCIPAL PARTIES IN PARLIAMENT

(1900-1959)

General Election	Conservative and Unionist	Liberal	Labour
1906.....	403	185	11
1906.....	153	387	41
1910 (Jan.)....	273	275	40
1910 (Dec.)....	272	272	42
1918.....	382 (a)	161 (b)	74 (c)
1922.....	347	118 (d)	142
1923.....	253	151	191
1924.....	411	39	150
1929.....	260	59	237
1931.....	471	72 (e)	65 (f)
1935.....	387	54 (g)	166 (h)
1945.....	180	25 (i)	396 (j)
1950.....	298 (k)	9	315 (l)

1955.....	344 (m)	6	277 (n)
1959.....	365 (m)	6	258 (o)

NOTES.—(a) Including 48 Non-Coalition Unionists. (b) Including 28 Non-Coalition Liberals. (c) Including 63 Non-Coalition Labour. (d) Liberal National 59; Liberal 59. (e) Liberal National 35 (Simon); Liberal 33 (Samuel); 4 (Lloyd George). (f) National Labour 13 (Macdonald); Labour 52 (Henderson). (g) Liberal National 33; Liberal 21. (h) National Labour 8; Labour 154; I.L.P. 4. (i) Liberal National 13; Liberal 12. (j) Labour 393; I.L.P. 3. (k) Incl.

Nat. Liberal. (l) Irish Nationalists (2) and Speaker make total of 625. (m) Including associates. (n) Sinn Fein (2) and Speaker make total of 630. (o) Independent (1) makes total of 630.

Conservatives and associates have subsequently gained one seat from Labour and lost one seat to Labour at by-elections and the Conservative candidate in S.E. Bristol by-election was declared to have been elected. Liberals have gained one seat from Conservatives.

LEGISLATION

Legislation is initiated in the Houses of Parliament in the form of Bills. Public Bills are of two kinds, those introduced by the Government of the day, and those introduced by a private member. A Bill (except a Money Bill, which must originate in the House of Commons) can be introduced in either House and when presented receives its *First Reading*, after which it is printed and circulated to members. The next stage is the *Second Reading*, in the debate on which the broad issues raised are discussed. If passed it reaches the *Committee Stage* and is referred to a Committee (of the whole House, Select, or Standing—see "Committees," pp. 313-14). Bills of major importance are usually, and Money Bills are always, sent to a Committee of the whole House. In committee, a Bill is discussed clause by clause, and is returned to the House with or without amendment. A Private Bill, which is introduced to enable an individual or a body corporate to acquire or vary certain powers, is referred to a *Select Committee*, and if opposed, witnesses may be called and counsel heard by the Committee. The next step is the *Report Stage*, when the Bill is accepted by the House, or sent back to the same, or sent back to another, Committee for further consideration. Finally the Bill receives its *Third Reading* (during which, in the House of Commons, only verbal amendments are permissible) and is sent to the other House. When a Bill has been passed by both Houses it becomes an *Act of Parliament*, on receiving the *Royal Assent*, which is signified by the Sovereign on the Throne, or by Commissioners (normally three Peers) in the Chamber of the House of Lords. The power to withhold assent (colloquially known as the *Royal Veto*) resides in the Sovereign, but has not been exercised in the United Kingdom since 1707, in the reign of Queen Anne.

COUNCILLORS OF STATE

On every occasion that the Sovereign leaves the realm for distant parts of the Commonwealth or a foreign country, it is necessary to appoint Councillors of State under Letters Patent to carry out the chief functions of the monarch, including the holding of Privy Councils and the signature of Acts passed by Parliament. The normal procedure is to appoint as Councillors three or four members of the Royal Family who are next in succession to the Throne among those remaining in the United Kingdom. For instance, during the Queen's African tour in 1961, the Councillors of State were Queen Elizabeth the Queen Mother, Princess Margaret, the Duke of Gloucester and the Duke of Kent.

In the event of the Sovereign on accession being under the age of eighteen years or at any time unavailable or incapacitated by infirmity of mind or body for the performance of the royal functions provision is made for a Regency. The Regency Act, 1953, has designated the Duke of Edinburgh as Regent, should a Regency become necessary during the minority of the children of her present Majesty.

GOVERNMENT BY PARTY

Towards the close of Charles II's reign the Exclusion Bill debates in Parliament (1679-80) were marked by the rise of two parties in the political life of the nation and they became known as *Whigs* and *Tories*, names given by the opponents to each other but afterwards mutually accepted, to continue as political labels until Whig was changed to *Liberal* and Tory to *Conservative*.

The Oxford English Dictionary explains the terms as follows:—

Whig [origin obscure; probably shortening of *Whiggamore*].—An adherent of the Presbyterian cause in Scotland in the seventeenth century. Applied to the Exclusionists who opposed the succession of James, Duke of York, to the crown, on the ground of his being a Roman Catholic.

Tory [Anglicized spelling of Irish *toraíde* "pursuer"] . . . applied to any Irish Papist or Royalist in arms. A nickname given 1679-80 by the Exclusionists to those who opposed the exclusion of James, Duke of York (a Roman Catholic), from the succession to the crown.

Before the reign of William and Mary (1688-1702) the principal Officers of State were chosen by and were responsible to the Sovereign alone and not to Parliament or the nation at large. Such officers acted sometimes in concert with one another, but more often independently, and the fall of one did not, of necessity, involve that of others, although all were liable to be dismissed at any moment.

In 1693 the Earl of Sunderland recommended to William III the advisability of selecting a Ministry from the political party which enjoyed a majority in the House of Commons and the first united Ministry was drawn in 1696 from the Whigs, to which party the King owed his throne, the principal members being Russell (the Admiral), Somers (the Advocate), Lord Wharton and Charles Montague (afterwards Chancellor of the Exchequer). This group became known as the *Junto* and was regarded with suspicion as a novelty in the political life of the nation, being a small section meeting in secret apart from the main body of Ministers. It may be regarded as the forerunner of the *Cabinet* and in course of time it led to the establishment of the principle of joint responsibility of Ministers, so that internal disagreement caused a change of *personnel* or resignation of the whole body of Ministers.

The *Act of Settlement* (1701) secured the Protestant succession to the throne and with the accession of George I (1714) the main cause of the political division was removed, leaving the Whigs as the dominant party for many years, the Tories being regarded as Jacobites in permanent opposition to the Hanoverians; but before the close of George II's reign (1760) they had become reconciled to the dynasty and during the French wars they secured an ascendancy in Parliament.

The accession of a King unfamiliar with the English language led to a disinclination on the part of the Sovereign to preside at meetings of his Ministers and caused the appearance of a *Prime Minister*, a position first acquired by Robert Walpole in 1721 and retained without interruption for 20 years and 326 days.

In 1828 the old party of the Whigs became known as *Liberals*, a name originally given to it by its opponents to imply laxity of principles, but gradually accepted by the party to indicate its claim to be pioneers and champions of political reform and progressive legislation. In 1831 a Liberal Registration Association was founded and Liberal Associations became widespread. As

the outcome of a conference at Birmingham in 1877 a National Liberal Federation was formed, with headquarters in London. The Liberal Party was in power for long periods during the second half of the nineteenth century in spite of the set-back during the Home Rule crisis of 1886, which resulted in the secession of the Liberal Unionists, and for several years during the first quarter of the twentieth century, but after a further split into National and Independent Liberals it numbered only 59 in all after the General Election of 1929, with a further fall to 12 (excluding National Liberals) after the 1945 Election, 9 after the 1950 Election and 6 after the 1951, 1953 and 1959 Elections.

Soon after the change from Whig to Liberal the Tory Party became known as *Conservative*, a name traditionally believed to have been invented by John Wilson Croker in 1830 and to have been generally adopted about the time of the passing of the Reform Act of 1832 to indicate that the preservation of national institutions was the leading principle of the party. After the Home Rule crisis of 1886 the dissentient Liberals entered into a compact with the Conservatives, under which the latter undertook not to contest their seats, but a separate *Liberal Unionist* organization was maintained until 1912, when it was united with the Conservatives under the title of National Unionist Association of Conservative and Liberal Unionist Organizations, the members of which became known as *Unionists*.

The Labour Party.—Labour candidates for Parliament made their first appearance at the General Election of 1892, when there were 27 standing as "Labour" or "Liberal-Labour." Of this number John Burns (Battersea) and J. Keir Hardie (West Ham) were elected "Labour" Members of Parliament and 13 others as "Liberal-Labour" members. At the General Election of 1895 the number of successful candidates fell to 12, with a further fall to 11 at the election of 1900.

On Feb. 27, 1900, as a result of a resolution passed by the Trades Union Congress in the previous September, a Conference of Trade Union and Socialist bodies was held in the Memorial Hall, Farringdon Street, London, and an organization called the *Labour Representative Committee* was set up in order to establish a distinct Labour Group in Parliament, with its own whips, its own policy, and a readiness to co-operate with any party which may be engaged in promoting legislation in the direct interest of labour. In 1905 the L.R.C. became known as *The Labour Party*.

Parliamentary Whips

In order to secure the attendance of Members of a particular party in Parliament on all occasions, and particularly on the occasion of an important division, *Whips* (originally known as "Whippers-in") are appointed for the purpose. The written appeal or circular letter issued by them is also known as a "whip," its urgency being denoted by the number of times it is underlined. Neglect to respond to a three-lined whip, headed "Most important," is tantamount to secession (at any rate temporarily) from the party.

Whips are officially recognized by Parliament and are provided with office accommodation in both Houses. Government Whips receive salaries from public funds, the Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip in the Commons*) receiving £3,750; the Captain of the Gentlemen-at-Arms (*Chief Whip in the Lords*), the Captain of the Yeomen of the Guard (*Assistant*

do.) and the first of the Junior Lords of the Treasury (*Deputy Chief Whip in the Commons*), each £2,200; the (Political) Lords in Waiting and the remaining Junior Lords of the Treasury, each £2,000.

The House of Lords

The *Government Whips* are: The Captain of the Honourable Corps of the Gentlemen at Arms (The Earl St. Aldwyn), the Captain of the Queen's Bodyguard of the Yeomen of the Guard (Lord Newton) and the (Political) Lords in Waiting (Lord Denham and Lord St. Oswald).

The *Labour Whips* are: The Earl of Lucan (*Chief Whip*); The Lords Burden and Shepherd.

The *Liberal Whip* is The Lord Amulree.

The House of Commons

The *Government Whips* are: The Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip*) and the Junior Lords of the Treasury. *Assistant Whips* (who are unpaid) are also usually appointed.

The *Labour Whips* are Rt. Hon. H. W. Bowden (*Chief Whip*); E. W. Short; G. H. R. Rogers; J. D. Cronin; C. A. Howell; G. M. Lawson; S. Irving; E. C. Redhead; I. Davies; J. McCann; A. D. Broughton; C. F. Grey.

The *Liberal National Whip* is Sir Herhert Walter Butcher, Bt.

The *Liberal Whip* is D. W. Wade.

SCOTTISH REPRESENTATIVE PEERS

(Elected at the Palace of Holyroodhouse, Oct, 1959).

Sixteen Representative Peers are elected for each Parliament by the entire adult Peerage of Scotland specially convened for that purpose.

Duke of Atholl.	Lord Forbes.
Earl of Caithness.	Lord Saltoun.
Earl of Perth.	Lord Sempill.
Earl of Haddington	Lord Balfour of
Earl of Airlie.	Burleigh.
Earl of Selkirk.	Lord Fairfax of
Earl of Mar and Kcille.	Cameron.
Earl of Northesk.	Lord Polwarth.
Earl of Dundonald.	Lord Sinclair.

IRISH REPRESENTATIVE PEERS

No elections were held after the establishment of the Irish Free State in 1920, and the last Irish Representative Peer (the 4th Earl of Kilmorey) died in 1961.

SPEAKERS OF THE COMMONS SINCE 1660

PARLIAMENT OF ENGLAND.

1660. Sir H. Grimston.	1685. Sir John Trevor.
1661. Sir E. Turner.	1688. H. Powle.
1673. Sir J. Charlton.	1694. Paul Foley.
1673. Edwd. Seymour.	1698. Sir T. Lyttleton.
1678. Sir Robt. Sawyer.	1700. Robert Harley
1679. Serjeant William Gregory.	(Earl of Oxford and Mortimer).
1680. W. Williams.	1702. John Smith.

PARLIAMENT OF GREAT BRITAIN.

1708 Sir Richard Onslow (<i>Lord Onslow</i>).	1761. Sir John Cust.
1710. Wm. Bromley.	1770. Sir F. Norton.
1713. Sir Th. Hanmer.	1780. C. W. Cornwall.
1715. Spencer Compton (<i>Earl of Wilmington</i>).	1788. Hon. W. Grenville (<i>Lord Grenville</i>).
1727. Arthur Onslow.	1789. Henry Addington (<i>Viscount Sidmouth</i>).

PARLIAMENT OF UNITED KINGDOM.

1801. Sir John Mitford (<i>Lord Redesdale</i>).
1802. Charles Abbot (<i>Lord Colchester</i>).
1817. Charles M. Sutton (<i>Viscount Canterbury</i>).
1835. James Abercomby (<i>Lord Dunfermline</i>).
1839. Charles Shaw-Lefevre (<i>Viscount Eversley</i>).
1857. J. Evelyn Denison (<i>Viscount Ossington</i>).
1872. Sir H. W. B. Brand (<i>Viscount Hampden</i>).
1884. Arthur Wellesley Peel (<i>Viscount Peel</i>).
1895. William Court Gully (<i>Viscount Selby</i>).
1905. James W. Lowther (<i>Viscount Ullswater</i>).
1921. John Henry Whitley.
1928. Hon. Edward Algernon FitzRoy.
1943. Col. D. Clifton Brown (<i>Viscount Ruffside</i>).
1952. William Shepherd Morrison (<i>Viscount Dunsrossit</i>).
1959. Sir Harry Hylton-Foster.

WOMEN MEMBERS OF PARLIAMENT

A movement to grant parliamentary franchise to women was supported in the mid-nineteenth century by Richard Cobden, Benjamin Disraeli and John Stuart Mill, but the vote was not accorded to women until 1918, although they had been included in the County Councils electorate by the Local Government Act of 1888. After a *Speaker's Conference* of all parties, which reported in favour of a limited form of women's suffrage, a clause enfranchising women was carried in both Houses and the *Parliament (Qualification of Women) Act* containing the clause which removed the sex disqualification for membership of the House of Commons, and conferred the franchise on women at the age of 30, received the Royal Assent in 1918. A further Act of 1928 granted them the vote on the same terms as men at the age of 21. Twenty-four women were elected at the 1959 Election (12 Labour, 11 Conservative and 1 Ulster Unionist), 2 fewer than at the Dissolution. One more woman Conservative member has since been returned at a by-election, but there is now one Labour woman member fewer.

FORFEITED DEPOSITS

Candidates at parliamentary elections who fail to obtain more than one-eighth of the total votes cast in their constituencies forfeit the deposit of £150 which all candidates must lodge. This law has been in force since the 1918 election.

Deposits forfeited at the 1959 Election totalled 116, 16 more than in 1951. Deposits were lost by 55 Liberal candidates, 17 Communists, 14 Welsh Nationalists, 7 Sinn Fein, 3 Scottish Nationalists, 2 Conservatives, 1 Labour and 17 others. Seventeen

out of 18 Communist candidates forfeited their deposits. In 1950 the record number of 443 deposits was lost.

THE INTER-PARLIAMENTARY UNION

6 Rue Constantin, Geneva, Switzerland.

The Inter-Parliamentary Union has been in existence since 1889; originally started to popularize the idea of International Arbitration, it achieved its object very substantially in helping to create the Permanent Court of Arbitration by the First Hague Conference and to bring about the convocation of the Second Conference of The Hague. In 1945, the Union resumed work on all questions connected with peace and reconstruction, which have been studied under various aspects. Some of them are as follows:—

The development of international law; economic development; national sovereignty; principles of international morality; social problems; immigration and emigration; intellectual relations.

In addition to member groups in national Parliaments, the Union works largely through standing study committees, which meet each Spring, and annual plenary conferences, which meet in the late summer.

BRITISH GROUP.

Hon. Presidents, The Lord Chancellor; Mr. Speaker, President, The Rt. Hon. Harold Macmillan, M.P.

Vice-Presidents, The Marquess of Salisbury, K.G.; The Earl of Scarbrough, K.G.; The Rt. Hon. J. S. B. Lloyd, C.H., C.B.E., T.D., Q.C., M.P.; The Rt. Hon. H. T. N. Gaiskell, C.B.E., M.P.; The Earl of Home, P.C.

Chairman, Sir Herbert Butcher, Bt., M.P.
Secretary, Maj-Gen. W. A. Dimoline, C.B., C.M.G., C.B.E., D.S.O. M.C.

COMMONWEALTH PARLIAMENTARY ASSOCIATION

The Commonwealth Parliamentary Association was formed under the title "Empire Parliamentary Association" in 1911, its object was, then as now, to facilitate the exchange of information, closer understanding and more frequent intercourse between those engaged in the parliamentary government of the Commonwealth. In 1949, the Association was reorganized as the Commonwealth Parliamentary Association, and a General Council was instituted as the governing body.

The Association now consists of eleven main branches in the Parliaments of the self-governing countries of the Commonwealth—the United Kingdom, Canada, Australia, New Zealand, India, Ceylon, Ghana, the Federation of Malaya, the Federation of Nigeria, Sierra Leone and Tanganyika—and three auxiliary branches, in the Parliaments of the Federation of Rhodesia and Nyasaland, Malta and Singapore. There are also branches in State, Provincial and Territorial Legislatures, as well as in the Parliaments of Northern Ireland, the Isle of Man, and the States of Jersey. In addition, there are sixteen affiliated branches in Legislatures of those Commonwealth countries which are not completely self-governing, making a total of 67 branches. The branch in Pakistan is at present in abeyance. Commonwealth Parliamentary Conferences and General Meetings are held every year in different countries of the Commonwealth. Chairman of the General Council, Hon. R. A. Njoku (Federation of Nigeria).

Secretary-General, R. V. Vanderfelt, O.B.E., Houses of Parliament, S.W.1.

Secretary, United Kingdom Branch, P. G. Molloy, M.C., Westminster Hall, Houses of Parliament, S.W.1.

PRIME MINISTERS.—Sir Robert Walpole, First Lord of the Treasury and Chancellor of the Exchequer from 1721 to 1742, rose to a power no Minister had ever before attained and was the subject of a protest entered in the journal of the House of Lords, the grievance being that the Sovereign should repose confidence in any one Minister to the exclusion of the remainder. He is usually regarded as the first Prime Minister and the eminence he achieved was repeated in the reign of George III, when the illness of the Sovereign necessitated the appearance of a leading and presiding minister, the Prince Regent not taking the Sovereign's place in this respect. After the Regency the Sovereign ceased to preside at Cabinet Meetings and the leading Minister became, in fact, Prime Minister.

War Office, J. E. Ramsden, M.P.

Leader of the Opposition, The Rt. Hon. Hugh Todd Naylor Gaitskell, C.B.E., M.P., born April 9, 1906.

THE HOUSES OF PARLIAMENT

Parliament originated in the demand of the King's Great Council, consisting of prelates, earls and barons, that there should be discussion about the affairs of state and in 1242 the word "parliament" was first used in an official document to describe such an assembly. In 1265 Simon de Montfort in the king's name summoned to a parliament not only the great men but also for the first time two representatives elected by each county, city and town, and by the end of the reign of Edward I it had become usual to summon the Commons.

The House of Lords is the ultimate Court of Appeal for all Courts in Great Britain and Northern Ireland. The Lords surrendered the ancient right of peers to be tried for treason or felony by their peers in 1948. Each House has the right to control its own internal proceedings and to commit for contempt.

The Commons claim exclusive control in respect of national taxation and expenditure and in respect of local rates and charges upon them. Bills such as the Finance Bill, which imposes taxation, and the Consolidated Fund Bills, which authorise expenditure, and are commonly known as Supply Bills, must begin in the Commons and have not been amended by the Lords in any respect in modern times. A bill of which the financial provisions are subsidiary may begin in the Lords; and the Commons may waive their rights in regards to Lords amendments affecting finance.

Normally a bill must be agreed to by both Houses before it receives the Royal Assent, but under the Parliament Acts, 1911 and 1948—(a) a bill which the Speaker has certified as a Money Bill, i.e. as concerned solely with national taxation, expenditure or borrowing, if not agreed to by the Lords within one month of its being sent to them, receives the Royal Assent and becomes law without their concurrence; (b) any other public bill (except one to extend the life of a Parliament) which has been passed by the Commons in two successive sessions and twice rejected by the Lords, receives the Royal Assent and becomes law, provided that one year has elapsed between its Second Reading in the first session and its Third Reading in the second session in the Commons.

The Parliament Act of 1911 also limited the duration of Parliament, if not previously dissolved, to 5 years. The term is reckoned from the date given on the writs for the new Parliament. During the War of 1914-18 the duration of Parliament was extended by successive Acts from 5 to 8 years, but a General Election was held before the end of the term finally prescribed and the Parliament which first met on Jan. 31, 1911, was dissolved on Nov. 25, 1918, fourteen days after the Armistice. At the outbreak of war in 1939 a similar course was followed and Parliament which first met on Nov. 26, 1935, was not dissolved until June 15, 1945.

Parliament is dissolved (as it is summoned) by the Sovereign, and until the passing of the Representation of the People Act (1867), Parliament was dissolved by the Demise of the Crown, but in that Act provision was made for its continuance to the normal duration, unless previously dissolved.

The longest recorded sitting of the House of Commons is 41 hours 30 minutes (from 4 p.m., Jan. 31 to 9.30 a.m. Feb. 2, 1881), that of the House of Lords is 11 hrs. 57 minutes (from 4.15 p.m. to 4.12 a.m. Nov. 1934).

Since 1803 reports of the proceedings of Parliament in open session have been published. From 1803-1888 these were known as *Hansard's Parliamentary Debates*, and in 1943 the word "Hansard" was restored to the title page. Copies are obtainable from H.M. Stationery Office and periodical issues are on sale throughout the country.

Payment of Members.—Members of the House of Lords are unpaid. They are entitled to re-imbursment of travelling expenses from their residence to the House in respect of regular attendance and repayment of expenses within a maximum of £3 3s. for each day of such attendance.

Since 1911 members of the House of Commons have received payments and travelling facilities, the payment of £400 being increased in 1937 to £600, and in 1946 to £1,000 per annum. Since 1957, members have received payment of £1,750 per annum; they are entitled to claim income tax relief on expenses incurred in the course of parliamentary duties. Members of Parliament contribute towards a Fund to provide pensions or grants to ex-members, their widows and orphans whose incomes are below certain limits; the income of the Fund in 1960-61 was £32,624 and expenditure grants £24,079. The Capital Account (1961) stood at £110,394. An Act was passed in 1957 enabling the Treasury to make an annual contribution to the fund. £22,000 was so contributed in 1961-62.

THE HOUSE OF LORDS

The House of Lords consists of some 900 Lords Spiritual and Temporal. The Lords Spiritual are the two Archbishops, the Bishops of London, Durham and Winchester, and the 21 senior Bishops from the remaining English sees. The Lords Temporal are: Peers by descent of England, Great Britain or the United Kingdom, peers of new creation, Lords of Appeal in Ordinary (who are life peers), Scottish Representative Peers (16 elected for duration of Parliament) and Life Peers and Life Peeresses created under the Life Peerages Act, 1958. An Irish Peer not in the House of Lords is eligible for election as a member of the House of Commons for an English, Welsh or Scottish constituency.

THE HOUSE OF COMMONS

By the *Representation of the People Act* (1885) membership was increased from 658 (at which it had stood since 1801 through the *Act of Union with Ireland*) to 670, and by a similar Act (1918) it was increased to 707. By the *Government of Ireland Act* (1920) and the *Irish Free State Agreement Act* (1922) membership was decreased to 615, Irish

representation being reduced from 105 to 13 members. By the *Representation of the People Act* of 1945 25 new constituencies were created, making the total 640; and by a similar Act of 1948 the total membership was reduced to 625. As the result of Orders in Council made in 1955 under the *House of Commons (Redistribution of Seats) Act*, 1949, the total membership has now been increased to 630.

THE PALACE OF WESTMINSTER

An ordinance issued in the reign of Richard II stated that "Parliament shall be holden or kept wheresoever it pleaseth the King" and at the present day the Sovereign summons parliament to meet and prescribes the time and place of meeting. The royal palace at Westminster, built according to legend by Edward the Confessor, and enlarged by William the Conqueror (Westminster Hall being added by William Rufus) was the normal place of Parliament from about 1340. St. Stephen's Chapel (originally built for King Stephen) was used from 1547 for the meetings of the House of Commons, which had previously been held in the Chapter House or Refectory of Westminster Abbey. The House of Lords met in an apartment of the royal palace.

The disastrous fire of 1834 destroyed the whole palace, except Westminster Hall, and the present Houses of Parliament were erected on the site from the designs of Sir Charles Barry and Augustus Pugin, between the years 1840 and 1867, at a cost of £2,198,000.

The Victoria Tower of the House of Lords is 330 feet high and when Parliament is sitting the Union Jack flies from sunrise to sunset from its flag-staff. The clock tower of the House of Commons is 320 feet high and contains "Big Ben," the 13½-ton Hour Bell named after Sir Benjamin Hall, First Commissioner of Works when the original bell was cast in 1856. The dials of the clock are 22½ feet in diameter the hands being 11 feet (hour) and 14 feet (minute) in length. The chimes and strike of "Big Ben" have achieved world-wide fame from broadcasting.

A light is displayed in the clock tower from sun-down to sunrise during the hours the House is in session.

The Chamber of the House of Commons was destroyed by enemy action in 1941 and the foundation stone of a new building, from the designs of Sir Giles Gilbert Scott, was laid by the Speaker on May 26, 1948. The new Chamber was used for the first time on Oct. 26, 1950.

THE LORD CHANCELLOR

The *Lord High Chancellor of England* is (although not addressed as such) the Speaker of the House of Lords. Unlike the Speaker of the House of Commons, he takes part in debates and votes in divisions. He sits on one of the *Woolsacks*, couches covered with red cloth and stuffed with wool. If the Lord Chancellor wishes to address the House in any way except formally as Speaker, he leaves the *Woolsack* and steps towards his proper place as a peer, below the Royal Dukes.

PRIME MINISTER'S RESIDENCE

Number 10, Downing Street, S.W.1, is the official town residence of the Prime Minister. No. 11 of the Chancellor of the Exchequer and No. 12 is the office of the Government Whip. The street was named after Sir George Downing, Bt., soldier and diplomatist, who was M.P. for Morpeth from 1660 to 1684.

Chequers, a Tudor mansion in the Chilterns, about 3 miles from Princes Risborough, was presented together with a maintenance endowment by Lord and Lady Lee of Fareham in 1917 to serve, from Jan. 1, 1921, as a country residence for the Prime Minister of the day, the *Chequers* estate of 700 acres being added to the gift by Lord Lee in 1921. The mansion contains a famous collection of Crown-wellian portraits and relics.

PRIME MINISTERS

Sir Robert Walpole, *Whig*, April 3, 1721.
Earl of Wilmington, *Whig*, Feb. 16, 1742.

Henry Pelham, *Whig*, Aug. 25, 1743.
Duke of Newcastle, *Whig*, May 13, 1751.
Duke of Devonshire, *Whig*, Nov. 25, 1755.
Duke of Newcastle, *Whig*, July 2, 1757.
Earl of Bute, *Tory*, May 28, 1752.
George Grenville, *Whig*, April 15, 1763.
Marquess of Rockingham, *Whig*, July 10, 1785.
Earl of Chatham, *Whig*, Aug. 2, 1765.
Duke of Grafton, *Whig*, Dec. 1767.
Lord North, *Tory*, Feb. 6, 1770.
Marquess of Rockingham, *Whig*, March 27, 1782.
Earl of Shelburne, *Whig*, July 13, 1782.
Duke of Portland, *Coalition*, April 4, 1783.
William Pitt, *Tory*, Dec. 7, 1783.
Henry Addington, *Tory*, March 21, 1801.
William Pitt, *Tory*, May 16, 1801.
Lord Grenville, *Whig*, Feb. 12, 1805.
Duke of Portland, *Tory*, March 31, 1807.
Spencer Perceval, *Tory*, Dec. 6, 1809.
Earl of Liverpool, *Tory*, June 15, 1812.
George Canning, *Tory*, April 30, 1827.
Viscount Goderich, *Tory*, Sept. 8, 1831.
Duke of Wellington, *Tory*, Jan. 25, 1823.
Earl Grey, *Whig*, Nov. 24, 1830.
Viscount Melbourne, *Whig*, July 13, 1831.
Sir Robert Peel, *Tory*, Dec. 25, 1831.
Viscount Melbourne, *Whig*, March 14, 1835.
Sir Robert Peel, *Tory*, Sept. 6, 1841.
Lord John Russell, *Whig*, July 6, 1846.
Earl of Derby, *Tory*, Feb. 23, 1852.
Earl of Aberdeen, *Peelite*, Dec. 23, 1852.
Viscount Palmerston, *Liberal*, Feb. 10, 1855.
Earl of Derby, *Conservative*, Feb. 25, 1851.
Viscount Palmerston, *Liberal*, June 13, 1853.
Earl Russell, *Liberal*, Nov. 6, 1855.
Earl of Derby, *Conservative*, July 6, 1855.
Benjamin Disraeli, *Conservative*, Feb. 27, 1868.
W. E. Gladstone, *Liberal*, Dec. 9, 1853.
Benjamin Disraeli, *Conservative*, Feb. 21, 1874.
W. E. Gladstone, *Liberal*, April 28, 1870.
Marquess of Salisbury, *Conservative*, June 21, 1885.
W. E. Gladstone, *Liberal*, Feb. 6, 1885.
Marquess of Salisbury, *Conservative*, Aug. 3, 1885.
W. E. Gladstone, *Liberal*, Aug. 18, 1892.
Earl of Rosebery, *Liberal*, March 3, 1894.
Marquess of Salisbury, *Conservative*, July 1, 1895.
A. J. Balfour, *Conservative*, July 12, 1902.
Sir H. Campbell-Bannerman, *Liberal*, Dec. 5, 1905.
H. H. Asquith, *Liberal*, April 8, 1908.
H. H. Asquith, *Coalition*, May 26, 1915.
D. Lloyd George, *Coalition*, Dec. 7, 1916.
A. Bonar Law, *Conservative*, Oct. 23, 1922.
S. Baldwin, *Conservative*, May 22, 1931.
J. R. MacDonald, *Labour*, Jan. 22, 1931.
S. Baldwin, *Conservative*, Nov. 4, 1931.
J. R. MacDonald, *Labour*, June 8, 1932.
J. R. MacDonald, *Coalition*, Aug. 25, 1931.
S. Baldwin, *Coalition*, June 7, 1935.
N. Chamberlain, *Coalition*, May 23, 1937.
W. S. Churchill, *Coalition*, May 11, 1940.
W. S. Churchill, *Conservative*, May 23, 1945.
C. R. Attlee, *Labour*, July 26, 1945.
Sir W. S. Churchill, *Conservative*, Oct. 26, 1951.
Sir A. Eden, *Conservative*, April 6, 1955.
H. Macmillan, *Conservative*, Jan. 13, 1957.

Of the 43 Prime Ministers 18 sat in the House of Lords and 24 in the House of Commons during their term of office. One, Lord John Russell (afterwards Earl Russell) sat in his first Ministry in the House of Commons, and in his second in the House of Lords. Benjamin Disraeli was raised to the peerage as Earl of Beaconsfield during his second term of office.

Lord Palmerston, as an Irish peer, and Lord North, as the holder of a courtesy title, both sat in the House of Commons.

HEIRS TO PEERAGES WHO ARE MEMBERS OF THE HOUSE OF COMMONS

Lord Balneil (*Crawford and Balcarres*) Hertford (*Conservative*); Earl of Dalkeith (*Buccleuch*), Edinburgh North (*Conservative*); Hon. T. G. D. Galbraith (*Strathclyde*) Glasgow, Hillhead (*Conservative*); Viscount Lambton (*Durham*), Berwick-upon-Tweed (*Conservative*); E. R. Lubbock (*Avebury*), Orpington (*Liberal*); M. A. J. St. Clair (*Sinclair*), S. E. Bristol (*Conservative*); Hon. Richard Stanley (*Derby*), North Fylde (*Conservative*); Hon. C. M. Woodhouse (*Terrington*), Oxford (*Conservative*).

NOTES ON PARLIAMENTARY PROCEDURE

WRITS FOR A NEW PARLIAMENT, ETC.—Wrists for a new Parliament are issued, on the Sovereign's warrant, by the Lord Chancellor to Peers individually, but in the case of the Commons to the returning officers of the various constituencies. A Writ of Summons to the House of Lords, before the time when baronies were created by Letters Patent, is held (should the writ be good and the Parliament legally summoned) to create a barony for the recipient and his heirs. The oldest English peerages, the baronies of De Ros and Mowbray, are founded on writs of summons issued in 1264 and 1283 respectively. The right to sit in the House of Lords is determined by the House. A newly-created Peer may not sit or speak in the House of Lords until he has been introduced by two sponsors of his own degree in the Peerage.

VACANT SEATS.—When a vacancy occurs in the House of Commons the Writ for a New Election is generally moved, during a session of Parliament, by the Chief Whip of the party to whom the member whose seat has been vacated belonged. If the House is in recess, the Speaker can issue a writ, should two members certify to him that a seat is vacant. He cannot, however, issue such a writ if the seat has been vacated through the former member's lunacy or his acceptance of the office of Bailiff of the *Chiltern Hundreds*, or Steward of the *Manor of Northstead*, a legal fiction which enables a member to retire from the House, for it has long been established that a member cannot, by his own volition, relieve himself of the responsibilities to his constituents which his membership involves. Until 1926, however, it was necessary for a member to retire from the House on accepting an office of profit under the Crown, which, it may be noted, subjected a private member who accepted ministerial office to the trouble and expense of seeking re-election in his constituency. The Act of 1926, which removed this necessity, retained the *Chiltern Hundreds* and the *Manor of Northstead* as offices of profit and thus perpetuated the fiction.

HOURS OF MEETING, ETC.—The House of Lords normally meets during the Session at 2.30 p.m. on Tuesday and Wednesday, and at 3 p.m. on Thursday. The House of Commons meets on Monday, Tuesday, Wednesday and Thursday at 2.30, and on Friday at 11. *Strangers* are present during the debates of both Houses on suffrage, and may be excluded at any time; this applies equally to the *Press Gallery*. Time has modified what was once a rigid exclusion and strangers have in recent years generally been admitted except during the secret sessions of war time. The proceedings are opened by Prayers in both Houses. The *Quorum* of the House of Commons is forty members, including the Speaker, and should a member point out to the Speaker at any time that fewer than forty members are present, the division bells are rung, and if forty members have not appeared within four minutes, the House is said to be *Counted Out*, and the sitting is adjourned. The *Quorum* of the Lords is three.

PROROGATION AND DISSOLUTION.—A session of Parliament is brought to an end by its Prorogation to a certain date, while Parliament itself comes to an end either by Dissolution by the Sovereign or the expiration of the term of 5 years for which it was elected (see p. 310).

ELECTION PETITIONS.—The right of a member of the House of Commons to sit in Parliament can be challenged by petition on several grounds, e.g.

ineligibility to sit owing to his bribery or corruption of the electors. Such petitions were originally decided by the House itself, but as party feeling was too much inclined to dictate the decision, their trial was in 1868 referred to the High Court of Justice.

STANDING ORDERS.—These are rules, which have from time to time been established by both Houses of Parliament, to regulate the conduct of business. These orders are not irrevocable, and like the Statutory Laws of England they can be easily revised, amended or repealed. The custom and precedents of Parliament, which dictate the bulk of Parliamentary procedure, have acquired, in seven centuries, prescriptive rights of obedience as firmly seated as the Common Law. *Sessional Orders* are applicable only to the session in which they are passed.

GENERAL PROCEDURE.—There are differences in the rules which govern the conduct of debates in the House of Lords and in the House of Commons. The Speaker in the Commons is responsible for the preservation of order and discipline in the House, but the only duty of the Lord Chancellor or the presiding Peer is to put the question. A Peer prefaces his remarks with "My Lords," whereas a member of the House of Commons addresses himself to Mr. Speaker.

A member of the House of Commons wishing to speak "rises in his place uncovered." When several members rise together the one whom the Speaker calls to continue the debate is described as *having caught the Speaker's eye*. In the House of Lords in similar circumstances, the House itself decides who shall speak.

Broadly speaking, a member may not, except in Committee, speak more than once to a question except in explanation or reply, and this privilege is granted only to the mover of a motion, or to the Minister or Member in charge of a bill.

A member may address the House from notes but must not read his speech, a distinction sometimes without a difference. In the Commons members must not be mentioned by name; the proceedings of the other House and matters *sub judice* must not be discussed; offensive words or epithets must not be used; a member may not speak after a question has been put, except on a point of order, and then he must address the Speaker "*seated and covered*." He must bow to the Speaker on entering and leaving the House.

QUESTION TIME.—After Prayers the first business of importance in the House of Commons is Question Time, which lasts from 2.45 until 3.30. Two days' notice of questions must be given to the *Clerk of the House of Commons*, the senior official of the House, who presides over it in the brief interval between the first assembly of a new Parliament and the election of a Speaker, and whose counterpart in the House of Lords is the *Clerk of the Parliaments*. Members of the House may put an unlimited number of questions to Ministers, but forty-eight hours' notice must be given, and not more than two demanding an oral answer may be made in any one day. Supplementary questions may be put either by the member asking the original question, or by other members, to obtain clarification of a Minister's answer.

COMMITTEES.—On the Assembly of a new Parliament, after the election of the Speaker, the

House of Commons deals with the subject of Committees, which are of three kinds:—*Committees of the Whole House*, *Select Committees* (appointed for a specific purpose) and the *Standing Committees* which consider public bills and whose composition, though laid down by Standing Orders, is frequently modified by Sessional Orders. When a bill dealing *exclusively* with Scotland or with Wales and Monmouthshire is referred to a Standing Committee, in the first place all Scottish, and in the second, all Welsh, members are automatically members thereof. Two of the most important Committees of the whole House of Commons are the *Committee of Supply* and that of *Ways and Means*. The former votes the money to provide for the service of the State, the amount being based on the estimates presented by the Government for the Services. Twenty days are allotted for debates on Supply before August 5, and there may be three other days before or after that date. The other Committee decides the methods to be adopted to raise the money voted by the Committee of Supply. These methods are foreshadowed by the *Budget* and put into effect by the *Finance Act*, while the *Appropriation Act* ensures that money voted for a certain purpose is applied to that purpose only.

CLOSURE AND THE GUILLOTINE.—To prevent deliberate waste of Parliamentary time, a procedure known as the *Closure* (colloquially known as "The Gag") was brought into effect on Nov. 10, 1882. A motion may be made *that the question be now put*. If the Speaker decides that the rights of a minority are not being prejudiced and 100 members support the motion, it is put to the vote, and, if carried, the original motion is put to the House, without further debate. The *Guillotine* represents a more rigorous and systematic application of the *Closure*. Under this system, a bill proceeds in accordance with a rigid time table and discussion is limited to the time allotted to each group of clauses. If the number of amendments put down appears likely to require more time than has been allotted for their discussion, the Speaker selects those which he considers are most important. The guillotine was first put into use on June 17, 1887, after prolonged debates on the Crimes Bill.

THE PREVIOUS QUESTION.—When the House is disinclined to give a decision on a particular question it is possible to avoid the issue by moving the *Previous Question*, which is done by one of several motions, e.g. "That the Question be not now put" or "That the House do now proceed to the Orders of the Day."

MOTION FOR ADJOURNMENT.—Adjournment ends the sitting of either House and takes place either under the provisions of a Standing Order or through an *ad hoc* resolution. In the Commons a method of obtaining immediate discussion of a matter of urgency is by moving *The adjournment on a matter of urgent public importance*. A member may ask leave to make this motion by giving written notice to the Speaker after Question Time and if it obtains the support of 40 members and the Speaker considers the matter of sufficient importance, it is discussed at 7 p.m. on that day. A Committee of the Whole House cannot adjourn but its proceedings may be interrupted by a motion *That the Chairman report Progress*. This brings the Speaker back to the House and the Committee seeks permission to sit on a future date.

PRIVILEGES OF PARLIAMENT.—There are certain rights and jurisdictions peculiar to each House of

Parliament, but privileges in their accepted meaning are common to both Houses. The right of imprisoning persons who commit what are in the opinion of the House breaches of privilege is beyond question, and such persons cannot be admitted to bail nor is any Court competent to investigate the causes of commitment. Each House is the sole and absolute judge of its own privileges and where law and privilege have seemed to clash a conflict of jurisdiction has arisen between Parliament and the Courts. Breaches of privilege may be described briefly as disobedience to the orders of either House; assaults or insults to Members or libels on them; and interference with the officers of the House in the carrying out of their duties. The House of Lords may imprison for a period, or may inflict a fine, but the House of Commons only commits generally and the commitment ceases on the prorogation of Parliament. The Bill of Rights established the principle that "freedom of speech and debates and proceedings in Parliament should not be impeached or questioned in any court or place out of Parliament." Consequently the House itself is the only authority which can punish a member for intemperance in debate. Freedom from arrest was a much prized privilege, but it applied only to civil arrest for debt (now abolished) and arbitrary arrest by the Government; members are amenable to all other processes of the Law. Freedom from arrest, in the case of members of the House of Commons, applies to the forty days after the prorogation and the forty days before the next meeting of Parliament.

THE SPEAKER.—The *Speaker of the House of Commons* is the spokesman and president of the Chamber. He is elected by the House at the beginning of each Parliament. He was originally a partisan but throughout a century of development between Speaker Onslow (1728) and Speaker Shaw-Lefevre (1839), the theory of the non-partisan Speaker was perfected, and he now neither speaks in debates, nor votes in divisions, except when the voting is equal. His order in the precedence of the Kingdom is high, only the Prime Minister and the Lord President of the Council going before him. He takes precedence of all Peers, except the two Archbishops, and Speakers are almost invariably raised to the Peerage on vacating their office, though Speaker Whitley is believed to have declined the offer of a Viscounty. The Speaker's most severe disciplinary measure against a member is to *Name him*. When a member has been named, i.e. contrary to the practice of the House called by surname and not addressed as the "Hon. Member for . . ." (his constituency), the Leader of the House moves that he "be suspended from the service of the House" for (in the case of a first offence) a period of a week. The period of suspension is increased, should the member offend again. Speaker Denison has left it on record that "The House is always kind and indulgent, but it expects its Speakers to be right. If he should be found tripping, his authority must soon be at an end." The Speaker's Deputy is the *Chairman of Committees*, officially the *Chairman of Ways and Means*, who presides in the absence of the Speaker and when the House has resolved itself into Committee by the passage of the motion *that the Speaker do now leave the Chair*. He, like the Speaker, is elected at the beginning of each Parliament, and when he is presiding as chairman of a committee neither speaks in debate nor votes. A *Deputy Chairman of Ways and Means* is also appointed, and several temporary chairmen, who frequently preside either over a Committee of the Whole House or over Standing Committees.

VOTES CAST AT THE GENERAL ELECTIONS, 1945, 1950, 1951, 1955 AND 1959
AND AT BY-ELECTIONS SINCE 1945

General Election, 1945

Labour.....	11,985,733
Conservative.....	8,693,858
Liberal.....	2,253,197
Liberal National.....	759,884
Ulster Unionist.....	441,109
Independent.....	287,345
Irish Nationalist.....	148,078
National.....	125,299
Communist.....	102,760
Commonwealth.....	96,247
Independent Conservative.....	40,948
Independent Labour Party.....	36,153
Scottish Nationalist.....	30,594
Welsh Nationalist.....	14,887
Democratic.....	1,809
Independent Socialist.....	472

Total..... 25,018,393

By-elections, 1945-50

At 50 by-elections between the General Elections of 1945 and 1950, the following votes were cast:—

Labour.....	740,914
Conservative and National Liberal.....	641,540
Ulster Unionist.....	87,435
Liberal.....	49,730
Independent.....	35,647
Irish Nationalist.....	24,422
Scottish Nationalist.....	13,040
Welsh Nationalist.....	12,775
Independent Labour Party.....	8,367
Communist.....	5,087

General Election, 1950

Labour.....	13,265,613
Conservative.....	11,166,026
National Liberal and Conservative.....	983,623
Ulster Unionist.....	352,334
Liberal.....	2,621,489
Independent.....	112,318
Communist.....	91,815
Irish Nationalist.....	65,211
Irish Labour.....	52,715
Labour Independent.....	26,014
Welsh Nationalist.....	17,680
Scottish Nationalist.....	10,630
Independent Labour Party.....	4,112

Total..... 28,569,577

By-elections, 1950-51

At 15 by-elections between the General Elections of 1950 and 1951 the following votes were cast:—

Conservative and Associate.....	265,535
Labour.....	264,977
Irish Labour.....	30,883
Liberal.....	2,753
Independent Labour Party.....	1,366
Communist.....	729
Independent.....	453

General Election, 1951

Labour.....	13,949,135
Conservative and Associate.....	*13,718,033
Liberal.....	730,552
Irish Nationalist.....	94,537
Communist.....	19,640

Welsh Nationalist.....	10,920
Scottish Nationalist.....	7,299
Independent Labour Party.....	4,388
Others.....	62,135

Total..... 28,595,595

* Four Ulster Unionists were returned unopposed.

By-elections 1951-55

At 45 contested by-elections between the General Elections of 1951 and 1955, the following votes were cast:—

Conservative and Associate.....	751,421
Labour.....	705,176
Liberal.....	28,216
Welsh Nationalist.....	10,243
Independent.....	3,405
Scottish Nationalist.....	2,931
Communist.....	1,457

General Election, 1955

Conservative and Associate.....	13,311,938
Labour.....	12,405,215
Liberal.....	722,395
Sinn Fein.....	152,310
Welsh Nationalist.....	45,119
Communist.....	33,144
Scottish Nationalist.....	12,112
Others.....	78,490

Total..... 26,760,754

By-elections, 1955-59

At 52 contested by-elections between the General Elections of 1955 and 1959, the following votes were cast:—

Labour.....	784,656
Conservative and Associate.....	779,577
Liberal.....	174,904
Sinn Fein.....	54,510
Independent.....	40,986
Welsh Nationalist.....	7,719
Anti-Partition.....	6,421

General Election, 1959

Conservative and Associate.....	13,750,965
Labour.....	12,195,765
Liberal.....	1,661,203
Welsh Nationalist.....	77,571
Sinn Fein.....	63,915
Communist.....	30,897
Scottish Nationalist.....	21,738
Others.....	61,225

Total..... 27,863,338

By-elections, 1959-62

At 35 by-elections since the General Election of 1959, the following votes have been cast:

Labour.....	464,938
Conservative and Associate.....	404,271
Liberal.....	263,034
Scottish Nationalist.....	13,299
Independent.....	12,891
Welsh Nationalist.....	2,091

The Conservatives have gained one seat (Briggshouse and Spenborough) from Labour, lost one (Middlesbrough, West) to Labour and lost one (Orpington) to Liberals.

ALPHABETICAL LIST OF MEMBERS OF THE HOUSE OF COMMONS

(Elected October 8, 1959)

For abbreviations, see page 323. The number before the name of each constituency is for easy reference and corresponds to the number of that constituency given on pp. 323-344.

THE HOUSE OF COMMONS BY CONSTITUENCIES

The figures following the name of the Constituency denote the total number of *Electors* in the Parliamentary Division at the General Election of 1959.

ABBREVIATIONS.—C. = Conservative; *Comm.* = Communist; *I.L.P.* = Independent Labour Party; *Ind.* = Independent; *L.* = Liberal; *Lab.* = Labour; *Nat. L.* = National Liberal; *Scot. Nat.* = Scottish Nationalist; *S.F.* = Sinn Féin; *U.U.* = Ulster Unionist; *Welsh Nat.* = Welsh Nationalist. An asterisk * denotes membership of the last House for the same division; an obelisk †, for a different division.

BY-ELECTIONS PENDING

At the time of going to press by-elections were pending in four constituencies, Dorset South, Wilts. Chippenham, Northamptonshire South and Norfolk Central. In Dorset South, Viscount Hinchinbrooke, who had since succeeded to the Earldom of Sandwich, had held the seat for the Conservative Party in 1959 with a majority of 6,693 in a three-cornered contest. The vacancies at Wilts. Chippenham and Northamptonshire South were caused by the Cabinet changes and the elevation to the peerage of Sir David Eccles and Sir Reginald Manningham-Buller, the new Lord Chancellor. The Conservative majorities at the General Election had been 8,785 and 5,934 respectively. In Central Norfolk, the vacancy was brought about by the death of the Conservative and National Liberal member, Mr. R. C. M. Collard, who had a majority in a three-cornered contest in 1959 was 6,787.

PARLIAMENTARY SUMMARY, LORDS AND COMMONS, 1961-62

THE QUEEN'S SPEECH.—The Queen, who was accompanied by the Duke of Edinburgh, opened in State the third session of Parliament on Oct. 31, and in her Speech from the Throne outlined the Government's legislative proposals. First to be mentioned by Her Majesty was a Bill to give power to retain for an additional six months certain National Service men who were serving full-time and to recall for a similar period National Service men who had a liability to part-time service. This announcement followed declarations that the improvement of relations between East and West remained a primary object of the Government's policy and that in cooperation with her allies British armed forces would continue to contribute to the prevention of war. The Government, the Speech went on, would do their utmost to achieve general and complete disarmament under effective international control. "In spite of the action of the Soviet Government in continuing to conduct nuclear tests on a massive scale in defiance of world opinion", it continued, "my Government will persevere in their endeavour to promote an international agreement on the discontinuance of tests of nuclear weapons". Every effort would be made to conclude successfully the negotiations with the European Economic Community and maintain close consultation with the interests involved. Ministers would continue to direct their policies towards maintaining the stability of sterling and to seek the co-operation of both sides of industry in the better co-ordination of the national effort, with a view to promoting faster economic growth, and they would endeavour to keep public expenditure within limits justified by the national resources. Bills would be introduced to give effect to proposals for the re-organization of the undertakings under the control of the British Transport Commission, to amend the law relating to teachers' salaries and school-leaving dates, and to improve the machinery for administering criminal justice. Legislation would also be introduced to control the immigration of British subjects from other parts of the Commonwealth and to give powers for the expulsion of immigrants convicted of criminal offences. Among other measures mentioned was one designed to promote greater safety on the roads.

In the Commons, the Address in reply was moved by Sir Roland Robinson and seconded by Mr. J. M. L. Prior. The Prime Minister, replying to Mr. Gaitskell, said they had no intention of returning to National Service if they could possibly avoid it, but there were factors which made it necessary to take special steps to keep up the strength of the Army. The Government had decided that they must take powers now, though they might not use them, to retain the men needed. This would put at their disposal a further pool of some 140,000 men, of which perhaps a tenth might be required. They also believed it necessary to form a new voluntary reserve of trained men, which would reinforce the Regular Army. The Minister of Defence, Mr. Watkinson, declared on the following day that the Army was not in bad shape. Regular recruiting was going better than at any time since the recruiting drive began, and there was every hope of success for the plan to change over to all-regular forces, but it would not be a fully balanced force by 1963. The new plan was the only sensible way out of the present short-term difficulties. A Labour amendment condemning the omission from the Government's programme of proposals to provide an adequate supply of houses was rejected by 334 to 227 on Nov. 6, and another complaining that the Speech included no practical proposals directed to achieving sustained expansion of production without inflation was defeated by 341 to 233 on the following day when the Address was agreed to. The House of Lords adopted their Address, which had been moved by Lord Melchett and seconded by Lord Amherst, on the same day, after the rejection by 88 to 28 of an Opposition amendment on the country's economic situation.

A STRONGER ARMY RESERVE.—One of the first measures dealt with by the House of Commons was the Bill to strengthen the Army Reserve by retaining a number of National Service men and recalling others. The Secretary for War, Mr. Profumo, moving the second reading on Nov. 27, said the proposals were designed to meet a definite short-term requirement as well as to provide a reserve of trained men in the long term, especially during the difficult times that seemed likely to lie ahead. The allegation that the measures were required because of the collapse of the recruiting campaign was, he declared, far from the truth. At present, the target looked well within reach and he still hoped that it would be reached. This in itself was not good enough, even for a short term, under conditions of acute tension. They would need to hold virtually all National Service men serving in the B.A.O.R. after April, and later they would probably have to keep back the majority of men wherever they were serving and transfer them to the B.A.O.R. Mr. Profumo said he proposed that only those essential on military grounds should be retained for the additional six months, and even of that number those with serious hardship claims should be released. He would set up an impartial hardship committee to advise him on borderline cases and appeals of special complexity. There would be pay increases for all National Service men who had to be retained, and more for their wives as well. Any man who had to serve an extra six months would have six months knocked off his normal part-time liability to general mobilization. The

Bill gave permissive powers to recall a man during his statutory period of 3½ years part-time national service. They hoped to build the strength of the Regular Army up to about 180,000. The Bill was also designed to create a new form of voluntary Reserve within the Territorial Army. The primary object was to provide a trained Reserve ready to supplement the Regular Army at short notice and increase the deterrent power of the functional Army in times of serious tension short of actual hostilities. For the Labour Party, Mr. George Brown moved an amendment to reject the Bill, declaring that the Government's defence policy had collapsed. This was defeated by 279 to 216, and the Bill was read a second time. In committee on Dec. 7, an amendment which would oblige the Government to consult the House before retaining or recalling National Service men was rejected by 175 to 135, and another to prevent the retention of National Service men while there were sufficient volunteers of similar qualifications available by 151 to 92. The House on Jan. 25 carried a guillotine motion allowing three days for the remaining stages of the Bill, and after further amendments had been defeated the committee stage was concluded on Feb. 1, and the Bill was read a third time by 196 to 129 on Feb. 8, when the War Secretary told the House that he would be starting to call upon the "Ever Readies", as he christened the men affected, as soon as the Bill became law. This was achieved on March 15, when the Bill received the Royal Assent after being passed by the Upper Chamber.

NATIONAL INSURANCE CHANGES.—Both Houses quickly passed a Bill increasing some classes of workmen's compensation and family allowances for incapacitated children. Moving the second reading on *Nov. 9*, Mr. Boyd-Carpenter, the Minister of Pensions, said that the Bill provided a further supplement of 15s. above the 17s. 6d. for certain cases of workmen's compensation for total disablement dealt with before the recent improved reform was introduced. It also provided that where an injury was suffered in the course of employment due to various causes, the cover of the Industrial Injuries Act should apply if the injured person did not contribute to its happening by any action not incidental to his employment.

The arrangements for increments to retirement pensions of some widows were also improved. The clauses on family allowances contained changes in respect of incapacitated children and proposed to incorporate a test of dependency into the earnings test in respect of apprentices. This would reduce by about 50,000 to a total of 20,000 the number of apprentices qualifying for family allowances and save about £1,250,000 a year. The Bill was read a third time in the Commons on *Dec. 13* and in the Lords on *Dec. 20*, when it received the Royal Assent.

CHANGES IN EDUCATION GRANTS.—Reforms in the system of grants to students were provided for in the Government's Education Bill, which also accepted the principle that children born in September to January should stay at school until the Easter holiday and the rest until the end of the summer term. Sir David Eccles, at that time Minister of Education, moving the second reading on *Nov. 13*, said the two fundamental principles which would determine the new system were generally accepted. The Bill laid on local authorities the duty of making awards of grants automatically when students had the qualifications and the offer of a university place. There would be prescribed rates and conditions for grants. Awards to students now cost £35,000,000 a year, and the Bill proposed to add another £10,000,000 a year, more or less, in the first year. The means test would be relaxed, and the effect of this would be that about 40 per cent. of students would now receive maximum grants in place of 25 per cent. on the old criteria, and about 10,000 more families would be relieved of all contributions, those in the middle incomes being substantially less.

Although criticized by some M.P.'s because the Minister had not accepted the recommendation to abolish the means test for parents, the Bill was read a second time without a division. In committee, on *Feb. 21*, a Government amendment was passed removing the age limit of 25 to qualify for a grant and enabling the Minister to prescribe a more flexible age range. The remaining stages were quickly secured, and the Royal Assent was given on *March 29*.

MORE JUDGES AND ASSIZES.—Several proposals for improving the machinery for administering criminal justice were contained in a Bill which Lord Kilmuir, at that time Lord Chancellor, outlined when it received a second reading on *Nov. 13*. He said the itinerary of judges would be altered to enable assizes to be held simultaneously in more than one town on each circuit, with the object of enabling criminal and civil business to be disposed of more speedily. More Judges would be needed, and the Bill authorized the appointment of five

additional High Court Judges beyond the present statutory maximum of 48. It also allowed some quarter sessions to sit as often as was necessary. After being passed by the Lords, the Bill was given a second reading in the Commons on *Jan. 23* when the Attorney-General, Sir Reginald Manningham-Buller, later to become Lord Chancellor, said the Government were satisfied that the reorganization of the assize system, and its bringing up-to-date, was practicable, and arrangements had already been made for the revised itineraries to operate during the next legal term provided the Bill had been brought into force.

In standing committee on *Feb. 22*, the Under Secretary for the Home Office said the Government would undertake a comprehensive study of the proposal to end all committal proceedings in magistrates' courts. The review would start as soon as machinery could be set up. During the report stage, an unusual error was remedied by the adoption of an amendment altering the reference in the Bill to "the Recorder of the City of London" to "the Recorder of London". The Royal Assent was given on *March 29*, and the additional Judges were appointed without delay.

HOUSE OF LORDS REFORM.—Both Houses adopted—the Commons on *March 28* and the Lords on *April 10*—a Government motion setting up a joint committee of the two Chambers to consider a limited measure of Lords Reform, including the renunciation of peerages by heirs sitting as M.P.'s. This question had been raised by Mr. Anthony Wedgwood Benn when he succeeded to his father's Viscountcy, and later in the Session Viscount Hinchinbrooke lost his seat for South Dorset when his father, the Earl of Sandwich, died. The committee was also invited to consider whether peeresses in their own right could sit in the House of Lords. Mr. Iain Macleod, Leader of the House, said the Government were not now proposing that there should be a review of the general composition of the House of Lords, and thought that a proposal that a Minister in the Lords should be entitled to address the Commons would not be within the terms of reference that he was proposing. He added that he could not be taken as binding the Government to introduce legislation to implement any recommendations that the committee might make. Supporting the motion, Mr. Gaitskell said that if it were approved the Opposition would agree to take part in the joint select committee. He agreed with Mr. Macleod's view about a member of the House of Lords making a speech in the Commons. The Liberal Party also agreed to the motion.

COMMONWEALTH IMMIGRATION CONTROLLED.—Mr. R. A. Butler, moving the second reading of the Commonwealth Immigration Bill on *Nov. 16*, paid tribute to the contribution which the immigrants from the Commonwealth had made to our national life, but declared that they had presented an intensified social problem. He said that it was with considerable reluctance that the Government had to ask Parliament for power to control their immigration. The justification for the control proposed in the Bill was the fact that a sizable part of the entire population of the earth was entitled to come and stay in this already densely populated country. A new factor in immigration in the last eight years was the continued immigration from other parts of the Commonwealth, notably the West Indies, India, Pakistan and Cyprus, and to a lesser extent from Africa, Aden and Hong Kong.

The total number of those newer immigrants, including children born to them in this country, was believed to be at a level of about half a million.

Mr. Butler thought the only practical means of dealing with the situation was to control the numbers on the basis of the issue of employment vouchers. The Bill made it clear that vouchers would only be given to Commonwealth immigrants who could support themselves and their dependents by their own means and who would be allowed to enter Great Britain to take jobs, either by having jobs to take up, by possessing qualifications likely to be useful, or under a quota system permitting an unspecified number of applicants to land. Mr. Butler emphasized that this part of the Bill would expire at the end of five years unless continued from time to time in periods not exceeding five years. He said the Government had been forced to the conclusion that if they were to operate control against citizens of the Irish Republic they would have to institute control within the United Kingdom itself, that was, against Northern Ireland. The Government took the view that this would be an intolerable imposition on British subjects. The Bill, he added, was drafted to see that there was no racial discrimination and the Government's decision was not dictated by such considerations. Mr. Gordon Walker moved a reasoned amendment for the rejection of the Bill, which, Mr. Gaitskell declared, would be claimed by some Fascists as the first victory they had won in England. The Bill was given a second reading after the rejection of the Labour amendment by 284 to 200.

Dealing with the Irish question in committee on Dec. 5, Mr. Butler said the Government had considered very carefully the possibility of manning and policing the border between Eire and Northern Ireland, and had decided that the difficulties were too great to make this possible. They wanted to have power to control Irish immigration in the case of absolute necessity. If the government of the Republic did not control immigration from the Commonwealth coming to their shores, it would be necessary to impose immigration control at the ports to catch immigrants coming in. If the Eire government took steps to control immigration at their ports that course would not be necessary. An amendment moved by Mr. Gaitskell to exclude from immigration control "a citizen of the United Kingdom and colonies" was defeated by 279 to 210. Another amendment to add to the exempted categories persons ordinarily resident in the United Kingdom on Nov. 1, 1961, was rejected by 200 to 123. An amendment to remove from the Bill the reserved power to impose control on immigrants from the Irish Republic was lost by 275 to 196 on Dec. 12. By a majority of 87 (315 to 228) the House carried a guillotine motion for the remaining stages of the Bill on Jan. 25. Before the committee stage was concluded, Mr. Butler moved an amendment to provide that the Act should continue until Dec. 31, 1963, and then expire unless Parliament otherwise determined, and this was agreed to. The committee stage was concluded on Feb. 13, and the report stage on Feb. 27, when the Bill was read a third time by 277 to 170 after Mr. Butler had claimed that it was justified by an increase in the number of immigrants. In the House of Lords, amendments to give the right of appeal to an independent body by immigrants refused admission were rejected by 55 to 30 on March 19 and by 51 to 27 on April 2, and the third reading was given on April 5 and the Royal Assent on April 18. The main part of the new Act, imposing control at ports of entry and the

issue of vouchers, came into operation on July 1 after a large increase in arrivals.

LEVY ON SPECULATIVE GAINS.—The maintenance of a firm basis for sound expansion was the description which Mr. Selwyn Lloyd himself applied to his second regular Budget, introduced in the House of Commons on April 9. Its chief feature was an immediate levy on speculative gains in respect of stocks and shares and buildings. The then Chancellor of the Exchequer promised that Schedule A tax on owner-occupiers of residential property would be ended, but he said he could do nothing this year. He told the House that revenue for the year amounted to £6,645,000,000 and expenditure above the line to £6,235,000,000, a surplus of £410,000,000. Below the line receipts were £517,000,000 and payments £1,138,000,000, a deficit of £621,000,000, so that the overall deficit or net borrowing requirement on Budget account was £211,000,000. After referring to "the notable contribution" of National Savings, the amount of which remaining invested increased by £170,000,000 during the year, he claimed that the immediate objective of the measures taken in the preceding year had been achieved; confidence in the pound was restored, the drain on the reserves had ceased, and exchange rates moved in favour of sterling. We should now be able to take full advantage of the export opportunities abroad, and we could reasonably expect a substantial growth of demand for the type of goods which we exported. The expansion in economic activity would add to consumers' incomes, which should lead to a substantial rise in personal spending. He thought it was essential that we should not, through the Budget, give such a further stimulus to home demand as would endanger the expansion of exports, although we wanted to see a growth of economic activity of such a nature as not to involve us in renewal of balance of payments difficulties. He believed such growth was within our power to a greater extent than ever before.

Turning to the Exchequer prospects for 1962-63, the Chancellor said that total expenditure above the line was £6,364,000,000, and total revenue on the basis of existing taxation and the ten per cent. surcharge £6,807,000,000, a surplus of £443,000,000, and as payments below the line were estimated at £507,000,000, the overall deficit or net borrowing requirement of the Budget would be £64,000,000. After announcing that he had asked the Board of Inland Revenue to discuss with professional bodies a draft scheme to replace income tax and profits tax with a single corporation tax, Mr. Lloyd said he proposed to put up from £300 to £400 the relief from income tax on the investment income of people over 65, and to raise from £275 to £300 for a single person and from £440 to £480 for a married couple the special income tax exemptions for people of 65 or over living on small incomes. The estate duty exemption limit would be raised from £3,000 to £4,000 with an appropriate adjustment in the rates of duty up to £6,000. Legislation would be introduced to bring immovable property abroad within the scope of estate duty, thus closing a gap, which, he declared, "was now being exploited on quite a large scale", but death duties payable abroad would be credited against those payable in this country. Dealing with his promise to end Schedule A, Mr. Lloyd said it was obvious that they could not charge owner-occupiers of residential property with that income tax on the new rating valuations which would take effect in 1963. Therefore, although the matter would be dealt with in the 1963 Finance

Bill, they would not seek to use the new rating valuations for Schedule A purposes so far as owner-occupiers of residential property were concerned but would make proposals for bringing the tax on them to an end. He could not say now whether this could be done in a single operation in one year—it would mean giving up about £50,000,000 a year. Next, he suggested that what might be called speculative gains should be subject to tax, to obtain broad equity of treatment between taxpayers rather than for yield, he added. Examples of such gains were the man who bought stocks and shares, not to invest but in the hope of a quick profit, and the man who bought land in the hope of a quick speculative profit through a sale to a genuine developer. Those who made a business of such transactions were already taxed as traders. He proposed that gains not now chargeable which resulted from the acquisition and disposal of stocks, shares, securities and rights in such assets should be made subject to tax under Schedule D if the disposal were within six months of the acquisition, and gains from the disposal of land, including buildings, if within three years of the acquisition. The charge would not apply to pictures, personal belongings and motor-cars, or to a house owned and occupied by the seller. Broadly speaking, the Chancellor explained, the gain to be charged would be calculated by deducting from the realized price the cost of acquisition, and losses could be set off against gains in applicable circumstances. Turning to prospects for the current year, he proposed to bring the surcharge of July, 1961, to an end, but to ask for a similar power of surcharge or rebate for possible use, and to impose increased rates of indirect taxation on tobacco, alcoholic drinks and light hydrocarbon oil and derv which would give a yield equivalent to the surcharge and would not affect present retail prices.

Declaring that there was a strong case for broadening the scope of purchase tax, the Chancellor aroused cries of opposition by announcing a new rate of 15 per cent. of the wholesale value of confectionery (in other words, sweets, including chocolate biscuits), soft drinks and ice cream, to operate from May 1. He expressed the opinion that they must begin to reform the structure of purchase tax, and said he intended to reduce the spread or limits of the rates. The top rate of 55 per cent. would be reduced to 45 per cent., the 27½ per cent. would be brought down to 25 per cent., and the 13½ per cent. and the 5½ per cent. would be consolidated at 10 per cent., involving an increase in respect of furniture and clothing except children's clothing. His last proposal was to remove the revenue element of the duty on sugar, coffee and cream, the result being a reduction of ½d. a lb. in the price of sugar. Mr. Lloyd said the changes in indirect taxation would provide revenue of £175,000,000 in 1962-63, almost exactly offsetting the revenue that would have been obtained if the surcharge had been kept in force. Altogether, taking into account the cost of concessions in Inland Revenue, he expected to have a surplus above the line of £433,000,000 and an overall deficit or borrowing requirement on Budget account of £74,000,000, about right from the general economic point of view.

The theme of the Budget, declared the Chancellor in conclusion, was the maintenance of a firm basis for sound expansion. "I believe events will prove the soundness of our policies and the wisdom of our actions", he said. As an indication of their opposition to the tax on sweets, Labour M.P.'s forced a division on the resolution relating to its imposition, but it was carried by 331 to 219, a Government majority of 112, and the other resolutions were

agreed to. Mr. Gaitskell said the capital gains tax could be regarded as a small step in the right direction, but he did not believe it would set at rest the grievances felt by people who were heavily taxed on their earned income. On the following day, Mr. James Callaghan described it as a Budget of lost opportunities. "The capital gains tax is innocuous", he said, "the sweets tax is contemptible, the Schedule A tax is electoral, and the whole Budget is trivial." Mr. Erroll, President of the Board of Trade, told him that the gains would definitely be treated as unearned income. The general debate ended on April 12 after the Chancellor had claimed that the sweets tax was felt generally to be sensible on broad grounds and had expressed his certainty that events would prove the soundness of the Government's policy and the wisdom of its actions. The remaining resolutions were agreed to on April 16, the Opposition again forcing a division on the sweets tax, in which the Government had a majority of 69, and the Finance Bill was brought in and read a first time. The second reading was secured on May 3, and the committee stage opened on May 15, an amendment to delete the proposal to increase from 5 to 10 per cent. purchase tax on a number of articles being defeated on the following day by 221 to 143. The Opposition attack on the speculative gains tax began on May 21 with an amendment to omit a time limit in one proposal, which was rejected by 264 to 188 on the following day, when another to increase from 3 to 10 years the period for tax liability on the disposal of land was defeated by 257 to 194. A Labour proposal to increase the income tax personal relief by £10 was lost by 250 to 176 on May 29, and on the following day a new clause providing for tax relief of £100 for persons suffering from 100 per cent. disability was defeated by 203 to 152. The stage was completed on June 5 and on report on July 2 a Government clause was agreed to providing a tax-free allowance of £100 to registered blind persons who were not already receiving tax-free disability payments or other similar payments of a greater value than the one proposed, and on condition that the £40 daughter allowance was not also drawn. The third reading was given on July 6, when Mr. Lloyd said he hoped it would not be necessary to use the 1961 regulator in the present financial year, but he would not hesitate to use it if he thought it right.

TRANSPORT COMMISSION REORGANIZED.—Both Houses devoted a considerable part of the Session to the Transport Bill, which carried out the Government's proposals for reorganizing the British Transport Commission. Moving the second reading on Nov. 20, Mr. Marples, Minister of Transport, said that the Commission was overloaded with work. Each of its main activities was to be placed under a separate board with clearly defined responsibilities and equipped to concentrate on its own task and each board would have a separate financial contribution and identity. The four statutory boards would deal separately with Railways, London Transport, Docks and Inland Waterways. The Railways Board would take over a unified system of railways. All fares and charges, except for passenger rates in London, would be removed from the control of the Transport Tribunal. The railways would have new powers to make better use of their assets, and all four boards would be able to develop land which was not required for the purpose of their business. The total capital debt of the Commission to be dealt with, said Mr. Marples, would be about

£2,450,000,000, excluding more than £300,000,000 liabilities for superannuation funds and savings bank deposits. About £475,000,000 of accumulated loans would be written off as a bad debt, leaving a capital debt of some £1,975,000,000 to be divided among the new undertakings. The operating deficit of the railways was now running at £80,000,000 a year. The new board's mammoth task was, first, to wipe out this operating deficit, and, second, to earn a surplus sufficient to cover interest. The Bill, he said, merely provided the framework in which we could give the railways further efficiency and enable them to play their part in our national life. Unless we made them efficient we were doomed to have a heavy load on the economy for years to come.

Mr. George Strauss, for the Labour Party, said that the Minister's case was unsound and open in many directions to the strongest possible objections, but he was prepared to admit that many features of the Bill were good, the most important being the proposal to write down drastically the capital structure of the railway industry. On the following day, Mr. Butler said the railway investment figure for 1962 allowed the Commission to go ahead with all the major schemes and programmes for which they were clearly committed and to embark on a number of new schemes which had been approved. The Bill was read a second time by 223 to 233, and was sent to a standing committee. On recommendation on April 17, Government amendments were carried to prevent the four statutory boards from manufacturing road vehicles except for the purposes of research and development, and the third reading was obtained by 277 to 206 on the following day. The House of Lords read the Bill a second time on May 8, after Lord Chesham had said that the Government had decided that the name of the new authority to deal with canals should be British Waterways Board rather than Inland Waterways, and this was agreed to in committee on May 21. By 59 to 39, the Peers on May 29 carried against the Government an amendment to provide that none of the boards should have power to develop for office accommodation, any part of their land in London not required by their business unless the Government were satisfied that an equivalent amount of existing office accommodation would have been converted to residential uses. As a result the clause amended was deleted from the Bill, but on July 9 the House agreed to restore the clause. Government amendments were agreed to on July 10 aimed at protecting the coastal shipping industry. The Bill was read a third time and passed on July 16 and received the Royal Assent on Aug. 1.

MAKING ROAD TRAFFIC SAFER.—Although the House of Lords had passed the Road Traffic Bill in the previous session, the Peers were called upon to consider the measure again as the Commons found they had not time to deal with it in 1962. Among the provisions of the Bill was one requiring courts, when hearing charges of driving while unfit to drive through drink or drugs, to have regard to any evidence about the level of alcohol or drugs in the blood or breath. With regard to cases of disqualification, courts would be obliged to order a minimum of six months' disqualification for a third offence in three years. The Bill was read a second time on Nov. 14, when Lord Chesham said that the planned level of Government investment on major improvements and new construction for

the next five years was £540,000,000. This would enable the road programme to be increased by fifty per cent., and the major projects, including most of the motorway network, to be completed over the next five years.

The clause in the Bill dealing with "hover" vehicles was an interim provision in the sense that the next few years would see a great deal of development of this type of vehicle. In the interests of road safety this machine must be subject to the same sort of rules as other traffic if they used roads. The Bill was read a third time and passed on Jan. 25. The Commons agreed to its second reading without a division on Feb. 28, when Mr. Marples said he was convinced that alcohol was a significant factor in a far greater number of road accidents than appeared from his Ministry's statistics. The standing committee on June 5 passed the clause bringing "hover" vehicles under the ordinary road traffic rules, and agreed to a Government amendment lowering the age limit for driving a road roller from 21 to 17. Mr. Hay, the Parliamentary Secretary to the Ministry, told the committee on July 3 that after a date to be announced later all new cars would have to be fitted with two sets of safety belts, one for the driver and the other for the front passenger. A new clause added on July 17 enabled the Minister to make regulations requiring all motor cyclists and pillion passengers to wear crash helmets, and another prohibited the holding of unauthorized rallies. During the report stage on July 25 Mr. Marples moved an amendment governing courts' discretion to order disqualification for less than six months unless they were satisfied that there were grounds for mitigating the normal circumstances of the conviction. This was agreed to and the Bill was read a third time, receiving the Royal Assent on Aug. 1.

RELATIONS WITH SOUTH AFRICA.—In place of temporary provisions necessitated by the withdrawal of South Africa from the Commonwealth, due to expire on May 30, a Bill to establish permanent relations between the United Kingdom and the Union came before Parliament early in the year. Moving the second reading in the Commons on Feb. 26, Mr. Heath, Lord Privy Seal, said that about 90 statutes in one way or another gave special treatment to members of the Commonwealth and about 50 of them were mentioned in the Bill. The Government had also reviewed the various arrangements and understandings that had been built up over many years to see if they involved legislation. Some 30 of these Acts would no longer apply to South Africa and 40 more which applied to the Dominions generally would lapse so far as South Africa was concerned when she ceased to have this status. What was left was hardly more than was found in the United Kingdom's relations with any other friendly foreign state with whom we shared mutual interests in trade, defence and the relationship between their peoples. No significant changes in the existing pattern of defence relations were involved. Regarding trade relations, the Bill had the effect of maintaining Commonwealth preference area treatment towards South Africa.

On the question of nationality, Mr. Heath said that South African citizens who had ties of blood, service or residence with Britain were to be given an opportunity to register as citizens of the United Kingdom and colonies instead of having to apply for naturalization until the end of 1965. Mr. Strachey, for the Opposition, moved an amendment for the rejection of the Bill on the ground that it tended to destroy

the value of Commonwealth membership, but this was rejected by 260 to 167 and the Bill was read a second time and sent to a standing committee which, on *March 8*, defeated by 15 to 8 an amendment by a Conservative member to extend by two years the period during which South Africans could apply for British citizenship. The Bill was read a third time by 201 to 140 on *March 29*, was passed by the Upper Chamber on *May 10*, and received the Royal Assent on *May 24*. Parliament was also called upon to deal with legislation caused by other changes in the Commonwealth. First came Bills granting independence within the Commonwealth to Tanganyika and modifying the constitution of Southern Rhodesia. Then, on *April 18*, a measure was passed giving effect to a referendum in Jamaica which resulted in the majority of the voters there expressing their desire to be out of the Federation of the West Indies, leaving the remaining eight colonies in the Federation. As a consequence came a Bill giving independence to Jamaica, with continued membership of the Commonwealth. Independence for Trinidad and Tobago and for Uganda was sanctioned by further Bills passed before the recess.

PIPE LINES FOR FUEL.—On the ground that the project should be nationalized instead of being carried through by private enterprise, the Labour Party opposed a Government Bill which authorized the construction of underground pipe lines for the distribution of oil, gas and coal all over the country. Moving the second reading in the House of Lords on *March 13*, Lord Mills said that in the immediate future the kind of pipe lines which would be dealt with were likely to be for carrying crude oils, petroleum products and chemicals, but pipe lines for carrying coal and other substances might well make their appearance later. The Government's policy was to allow private enterprise the greatest possible scope while curbing unnecessary pipe lines. They believed the Bill provided a fair balance between all the interests concerned while retaining power to control development without excessive interference in detail. In committee on *March 26* an amendment empowering the British Transport Commission to construct and operate pipe lines was rejected by 59 to 17. A new clause moved on report on *April 3* by the Lord Chancellor to secure that a pipe line was so constructed as to reduce the necessity for the construction of others was agreed to. The Commons gave the Bill a second reading on *May 9*, after the defeat by 277 to 195 of a Labour amendment to reject the measure on the ground that it failed to provide for the development of a pipe line system by public enterprise. A proposal to nationalize the development of the lines in Britain was rejected in standing committee, and after the adoption of a guillotine resolution the Bill was returned to the House, where the third reading was received by 259 to 193 on *July 25*, the Royal Assent being given on *Aug. 1*.

THE CABINET RECONSTRUCTED.—Shortly before Parliament adjourned for the summer recess the Prime Minister announced a number of major changes in the Cabinet, involving the resignation of seven of its members. The most important departure was that of Mr. Selwyn Lloyd, whose place as Chancellor of the Exchequer was filled by Mr. Reginald Maudling. The other resigning Ministers were the Lord Chancellor (Lord Kilmuir), Mr. John MacLay, Mr. Harold Watkinson, Lord Mills, Dr. Charles Hill and Sir David Eccles. Mr.

R. A. Butler became "First Secretary of State", a new office, retaining his position as Deputy Prime Minister and responsibility for Central Africa affairs, but relinquishing the Home Office, where he was succeeded by Mr. Henry Brooke. Sir Reginald Manningham-Buller went to the House of Lords as Lord Chancellor with the title of Lord Dilhorne, Mr. Duncan Sandys combined the Commonwealth Relations Office and the Colonial Office, Mr. Peter Thorneycroft became Minister of Defence, Sir Edward Boyle Minister of Education, Mr. John Boyd-Carpenter Chief Secretary to the Treasury, Mr. Michael Noble Secretary of State for Scotland, Sir Keith Joseph Minister of Housing and Local Government and Minister for Welsh Affairs, and Mr. William Deedes Minister without Portfolio. Mr. Enoch Powell remained Minister of Health, with a seat in the Cabinet, which continued to consist of 21 members. A further list of appointments revealed another nine resignations and offices for eleven backbenchers. The Ministry of Works became the Ministry of Public Building and Works with the object of ensuring the maximum output of the building industry in the right balance. The Opposition promptly tabled a vote of censure, calling upon the Prime Minister to advise the sovereign to dissolve Parliament so that a general election could be held. This was defeated on *July 26* by 351 to 253, a Government majority of 98. Mr. Gaitskell, introducing the motion, described the move as an act of a desperate man in a desperate situation and suggested that the Prime Minister's Government would be remembered not for the leadership it gave the nation but as a conspiracy to retain power. Mr. Macmillan claimed that a sound basis for growth had been achieved and that it must be confirmed with a move in a new phase, with which, he had decided, there must be some new commanders. Before Parliament was dissolved the Government had a lot to do and they meant to do it. They had taken an important step forward to find ways of achieving a more steady and rapid rate of expansion. But an incomes policy was necessary as a permanent feature of Britain's economic life. We needed an impartial and authoritative view on the more important and difficult pay questions and to fill this need the Government would set up a National Incomes Commission to inquire into and express views on pay claims of special importance, taking into account the consideration of national interest. The Commission would deal not only with the problems of industry but with public and other services. The Prime Minister also announced that the Government had decided to accept the proposal to set up a Consumers' Council and legislation for consumer protection would be introduced in the coming session. He reaffirmed that the Shops and Offices Bill would also form part of their programme and said they proposed to introduce legislation laying down a statutory minimum period of notice for workers and dealing with contracts of service. In his first speech in the House as Chancellor, Mr. Maudling, winding up the debate, said the principle that incomes should not rise faster than national productivity applied to all incomes, including wages and dividends. Lord Hailsham, in the House of Lords on *July 30* said the National Incomes Commission would not override free bargaining and was no instrument designed against the trade unions. Parliament was adjourned on *Aug. 3* with the intention, unless recalled earlier, of reassembling on *Oct. 25* for prorogation and the opening of the fourth Session on *Oct. 30*.

PUBLIC ACTS OF PARLIAMENT, 1961-62

The list below commences with notes on thirteen Public Acts of Parliament which received the Royal Assent before September, 1961, but which were only mentioned briefly in the last summary. Those Public Acts which follow received the Royal Assent after September, 1961. The date stated after each Act is the date on which it came into operation.

RATING AND VALUATION ACT, 1961 (various dates) amends the law with respect to the valuation of property for the purposes of rates. Amongst other things, the Act provides for the abolition of derating of industrial hereditaments, gives power to the Minister to derate private houses for the period of the valuation lists due to come into force on April 1, 1963, provides a system for the rating of charities, and provides a formula for the assessment of the rateable values of statutory water undertakings.

LAND DRAINAGE ACT, 1961 (July 27, 1961) enables river boards and catchment boards to raise drainage charges for the purpose of meeting part of their expenses, and makes further provision with regard to land drainage.

COVENT GARDEN MARKET ACT, 1961 (July 27, 1961) establishes a Covent Garden Market Authority and vests in it lands in the parish of St. Paul, Covent Garden, and makes provision for the conduct in Covent Garden, under the control of the Authority, of activities relating to the dealing in bulk in horticultural produce. The preamble to this Act states that it is expedient to make further provision for regulating the market business carried on ... and in connection therewith, for reducing the congestion of traffic and the risk of fire now occasioned by the ill-arranged state of those lands.

POLICE FEDERATION ACT, 1961 (day to be appointed) amends the law relating to the Police Federation by providing that members of the metropolitan police force below the rank of superintendent who are not members of the Federation shall become members.

ARMY AND AIR FORCE ACT, 1961 (various dates) continues and amends the Army Act, 1955, and the Air Force Act, 1955. It deals with Army and Air Force enlistment and with discharge by purchase, and contains certain amendments to disciplinary provisions of the 1955 Acts.

HUMAN TISSUE ACT, 1961 (September 27, 1961) provides that if any person, either in writing at any time or orally in the presence of two or more witnesses during his last illness, has expressed a request that his body or any specified part of his body be used after his death for therapeutic purposes or for purposes of medical education or research, the person lawfully in possession of his body after his death may, unless he has reason to believe that the request was subsequently withdrawn, authorize the removal from the body of any part or, as the case may be, the specified part, for use in accordance with the request. Further, the person lawfully in possession of the body may authorize the removal of any part from the body for use for such purposes, provided he has no reason to believe that the deceased had expressed any objection to his body being so used or that the surviving spouse or any surviving relative objects. The removal must be effected by a fully registered medical practitioner.

CROWN ESTATE ACT, 1961 (July 27, 1961) makes new provision for management of the Crown Estates by the Crown Estate Commissioners.

CROFTERS (SCOTLAND) ACT, 1961 (August 27, 1961) makes fresh provision with respect to the re-organization, development and regulation of crofting in the crofting counties of Scotland, and authorizes the making of grants and loans for the development of agricultural production on crofts

and on holdings comparable in value and extent to crofts.

APPROPRIATION ACT, 1961 (August 3, 1961) applies a sum out of the Consolidated Fund to the service of the year ending March 31, 1962.

SUICIDE ACT, 1961 (August 3, 1961) provides that the rule of law whereby it is a crime for a person to commit suicide is abrogated, but that a person who aids, abets, counsels or procures the suicide of another, or an attempt by another to commit suicide, shall be liable on conviction on indictment to imprisonment for a term not exceeding fourteen years.

TRUSTEE INVESTMENTS ACT, 1961 (August 3, 1961) considerably enlarges the investment powers of trustees and, subject to certain conditions, permits them to invest part of the trust funds in shares in companies incorporated in the United Kingdom. The Act also deals with the duty of trustees in choosing investments, the powers of persons having the same investment powers as trustees, and the investment powers of local authorities.

HIGHWAYS (MISCELLANEOUS PROVISIONS) ACT, 1961 (September 3, 1961) makes a number of amendments to the law relating to highways, streets and bridges. In particular, the Act abrogates the rule of law exempting the inhabitants at large and any other persons as their successors from liability for non-repair of highways.

PUBLIC HEALTH ACT, 1961 (October 3, 1961) makes many amendments to the law relating to public health.

HOUSING ACT, 1961 (November 24, 1961) makes a number of amendments to the Housing Act, 1957, and to the Housing (Financial Provisions) Act, 1958. It also imposes certain repairing obligations on landlords in the case of leases of dwelling-houses granted for a term of less than seven years. [See "Legal Notes."]

TANGANYIKA INDEPENDENCE ACT, 1961 (December 9, 1961) makes provision for the attainment by Tanganyika of fully responsible status within the Commonwealth.

SOUTHERN RHODESIA (CONSTITUTION) ACT, 1961 (November 22, 1961) provides for the grant of a new constitution for Southern Rhodesia.

EXPORT GUARANTEES ACT, 1961 (December 20, 1961) increases from £400,000,000 to £800,000,000 the limit imposed by section 2 of the Export Guarantees Act, 1949 (as amended), on the liabilities which may be undertaken by the Board of Trade in respect of guarantees under that section and certain other transactions under the Export Guarantees Act.

EXPIRING LAWS CONTINUANCE ACT, 1961 (December 20, 1961) continues in force certain enactments which would otherwise expire.

COAL INDUSTRY ACT, 1961 (December 20, 1961) provides that the power of the Minister of Power to make advances to the National Coal Board for capital purposes shall include power to advance to the Board sums required before the end of 1962 for financing to an amount not exceeding £50,000,000 any accumulated deficit on revenue account.

FAMILY ALLOWANCES AND NATIONAL INSURANCE ACT, 1961 (various dates) improves and extends the allowances payable out of the Industrial Injuries Fund in respect of injury or disease arising out of pre-1948 employment, extends the class of accidents treated as arising out of employment, and makes other amendments in enactments relating to in-

dustrial injuries, national insurance and family allowances.

CONSOLIDATED FUND ACT, 1962 (February 21, 1962) applies a sum out of the Consolidated Fund to the service of the year ending March 31, 1962.

CIVIL AVIATION (EUROCONTROL) ACT, 1962 (days to be appointed) makes provision in connection with the international convention relating to co-operation for the safety of air navigation, known as the Eurocontrol Convention, provides for the recovery of charges for services provided for aircraft, and authorizes the use of certain records as evidence in proceedings for the recovery of such charges or proceedings under the Air Navigation Order.

LOCAL GOVERNMENT (FINANCIAL PROVISIONS etc.) (SCOTLAND) ACT, 1962 (February 21, 1962) amends the law relating to local government finance in Scotland in consequence of revaluation.

ARMY RESERVE ACT, 1962 (March 15, 1962) gives power to the Secretary of State to retain a national serviceman in army service for up to six months from the end of his normal service, and to recall national servicemen into army service in certain circumstances. The Act also creates the Territorial Army Emergency Reserve.

CONSOLIDATED FUND (No. 2) ACT, 1962 (March 29, 1962) applies certain sums out of the Consolidated Fund to the service of the years ending March 31, 1961, 1962 and 1963.

EDUCATION ACT, 1962 (March 29, 1962) makes further provision with respect to awards and grants by local education authorities, and to enable the General Grant Order, 1960, to be varied so as to take account of additional or reduced expenditure resulting from action taken in accordance with that provision; and it makes further provision as to school leaving dates.

VEHICLES (EXCISE) ACT, 1962 (April 1, 1962) consolidates various enactments relating to excise duties on mechanically propelled vehicles, and to the licensing and registration of such vehicles.

TELEGRAPH ACT, 1962 (April 29, 1962) consolidates various enactments empowering the Postmaster-General to regulate the use of telegraphs and the general conduct of telegraphic business.

CRIMINAL JUSTICE ADMINISTRATION ACT, 1962 (various dates) provides for certain additional judges and other judicial officers, and contains amendments to the law relating to the administration of criminal justice in England and Wales. Among other things, it increases the maximum number of puisne judges of the High Court from forty-eight to fifty-three; it allows the appointment of assistant clerks of assize; it creates, for the purposes of the law relating to sheriffs, a new county of Hallamshire which consists of the Sheffield Division of the County of York.

FORTH AND CLYDE CANAL (EXTINGUISHMENT OF RIGHTS OF NAVIGATION) ACT, 1962 (March 29, 1962) extinguishes all rights of navigation on the Forth and Clyde Canal, and puts an end to the obligation of the British Transport Commission to keep the Canal open and to maintain it for purposes of navigation.

COMMONWEALTH SETTLEMENT ACT, 1962 (March 29, 1962) extends the period for which the Secretary of State may make contributions under schemes agreed under section 1 of the Empire Settlement Act, 1922, i.e., schemes for promoting settlement in the overseas countries of the Commonwealth.

BRITISH MUSEUM ACT, 1962 (April 18, 1962) enables the Trustees of the British Museum to lend certain works of art for exhibition in Vienna under the auspices of the Council of Europe.

WEST INDIES ACT, 1962 (April 18, 1962) enables provision to be made for the ending of the inclusion of colonies in the West Indies Federation, and for the dissolution of the Federation. It also enables common courts and other authorities to be established for, and also provision to be made for the government of, certain West Indian Colonies.

INTERNATIONAL MONETARY FUND ACT, 1962 (April 18, 1962) enables the United Kingdom to take part in arrangements under which the International Monetary Fund may borrow supplementary resources from its members.

COMMONWEALTH IMMIGRANTS ACT, 1962 (day to be appointed) makes temporary provision for controlling the immigration into the United Kingdom of Commonwealth citizens. It authorizes deportation from the United Kingdom of certain Commonwealth citizens on recommendation by a convicting court. It amends the qualifications required of Commonwealth citizens applying for citizenship of the United Kingdom and Colonies (see "Legal Notes"), and makes corresponding provisions in respect of British Protected Persons and citizens of the Republic of Ireland. Part I, dealing with control of immigration, does not apply to any Commonwealth citizen who was born in the United Kingdom, or who holds a United Kingdom passport and is a citizen of the United Kingdom and Colonies, or who holds such a passport issued in the United Kingdom or the Republic of Ireland, or who is included in the passport of another person so excepted. But it does apply to British protected persons and citizens of the Republic of Ireland. In relation to any other Commonwealth citizen, immigration officers may either refuse admission into the United Kingdom or admit subject to a condition restricting the period for which he may remain. But these powers cannot be exercised against any person, except one subject to a deportation order under Part II, who is ordinarily resident in the United Kingdom or was so resident at any time within the past two years, or who is the wife, or a child under sixteen, of a Commonwealth citizen who is (i) resident in the United Kingdom or (ii) now admitted. Other limitations on the power to refuse admission exist in relation to persons holding vouchers issued by the Ministry of Labour, students and persons who are self-supporting without employment. Part II, dealing with deportation, provides that where in certain circumstances a Commonwealth citizen of at least seventeen is convicted of an offence punishable with imprisonment, the court may recommend his deportation unless he is or was ordinarily resident in the United Kingdom at the date of the conviction and has been continuously so resident for at least five years ending with that date. If he thinks fit, the Secretary of State may then make an order requiring him to leave the United Kingdom and prohibiting his return whilst the order is in force.

COAL CONSUMERS' COUNCILS (NORTHERN IRISH INTERESTS) ACT, 1962 (May 24, 1962) provides for the appointment to the Industrial Coal Consumers' Council and the Domestic Coal Consumers' Council of persons to represent Northern Irish interests.

SOUTH AFRICA ACT, 1962 (May 31, 1962) makes final provision as to the operation of the law in consequence of the Union of South Africa having become a republic outside the Commonwealth. In particular, any person who was a British subject by virtue only of his citizenship of the Republic ceases to be a British subject, although a procedure is laid down by which South Africans may apply for registration as citizens of the United Kingdom and Colonies before the end of 1965.

NATIONAL ASSISTANCE ACT, 1948 (AMENDMENT) ACT, 1962 (May 24, 1962) empowers local authorities to provide meals and recreation for old people.

POLICE FEDERATIONS ACT, 1962 (May 24, 1962) amends the law relating to the constitution and proceedings of the Police Federations.

ANIMALS (CRUEL POISONS) ACT, 1962 (January 1, 1962) enables the Secretary of State to prohibit or restrict the use of poisons for destroying animals.

RECORDED DELIVERY SERVICE ACT, 1962 (July 3, 1962) provides that for the purpose of any enactment, recorded delivery service is to be an alternative to registered post.

HOUSING (SCOTLAND) ACT, 1962 (July 3, 1962) makes further arrangements for the giving of financial assistance for the provision and improvement of housing accommodation in Scotland and for building experiments in connection therewith. It amends as respects Scotland the law relating to the permitted increase of rent in respect of improvements to houses unfit for human habitation, and to the obligation of lessors and lessees as to repairs under short leases of houses. The last-mentioned provisions are similar to those of the Housing Act, 1961 (which did not apply to Scotland). (See "Legal Notes".)

AGRICULTURAL AND FORESTRY ASSOCIATIONS ACT, 1962 (October 3, 1962) provides that certain agreements made by or between members of associations of persons occupying land used for agriculture or forestry shall be exempted from the application of Part I of the Restrictive Trade Practices Act, 1956.

NORTHERN IRELAND ACT, 1962 (days to be appointed) amends with regard to certain matters, and empowers Her Majesty in Council to amend with regard to others, the law concerning the administration of justice in Northern Ireland. The Act also enlarges the legislative power of the Parliament of Northern Ireland, amends other law applicable to Northern Ireland, and lays down a rule for interpreting, in the application of Acts of Parliament to Northern Ireland, certain expressions commonly used therein.

SEA FISH INDUSTRY ACT, 1962 (July 3, 1962) makes further provision, by way of financial assistance and otherwise, with respect to the white fish and herring industries, including provision relating to the White Fish Authority and the Herring Industry Board. The Act also makes further provision for the regulation of fishing for, and the landing and commercial use of, sea-fish, and with respect to shellfish, and enables the charges leviable at certain harbours to be varied, and facilitates borrowing for certain harbour and marine work undertakings.

MARRIAGE (WALES AND MONMOUTHSHIRE) ACT, 1962 (July 3, 1962) extends certain provisions of the Marriage Act, 1949, as to publication of banns, to Wales and Monmouthshire.

HEALTH VISITING AND SOCIAL WORK (TRAINING) ACT, 1962 (day to be appointed) establishes the Council for the Training of Health Visitors and the Council for Training in Social Work, into functions relating to the training of health visitors and training in social work, and extends the powers of the Minister of Health, the Secretary of State and local authorities with respect to research into matters of social welfare.

ACTS OF PARLIAMENT (NUMBERING AND CITATION) ACT, 1962 (July 19, 1962) provides that the chapter number assigned to Acts of Parliament passed in 1963 and thereafter shall be assigned by reference to the calendar year, and not the Session, in which they are passed.

SHOPS (AIRPORTS) ACT, 1962 (July 19, 1962) exempts shops at certain airports, and the carrying on of any retail trade or business in connection with such shops, from the provisions of Part I of the Shops Act, 1950 (relating to hours of closing).

LOCAL AUTHORITIES (HISTORIC BUILDINGS) ACT, 1962 (July 19, 1962) makes provision for contributions by local authorities towards the repair and maintenance of buildings of historic or architectural interest and the upkeep of gardens occupied with such buildings.

DRAINAGE RATES ACT, 1962 (July 19, 1962) authorizes the use of an alternative method of assessing drainage rates in certain cases.

JAMAICA INDEPENDENCE ACT, 1962 (July 19, 1962) makes provision for, and in connection with, the attainment by Jamaica of fully responsible status within the Commonwealth.

COLONIAL LOANS ACT, 1962 (July 19, 1962) makes certain amendments to the Colonial Loans Acts, 1949 and 1952.

LAW REFORM (DAMAGES AND SOLATIUM) (SCOTLAND) ACT, 1962 (July 19, 1962) amends the law of Scotland relating to damages and solatium by extending the entitlement of parents to sue in respect of the death of a child, and to remove a doubt as to the title of a child to sue in respect of the death of his mother while his father is alive.

CARRIAGE BY AIR (SUPPLEMENTARY PROVISIONS) ACT, 1962 (a day to be appointed) gives effect to a Convention, supplementary to the Warsaw Convention, for the unification of certain rules relating to international carriage by air performed by a person other than the contracting carrier.

AIR GUNS AND SHOT GUNS, ETC. ACT, 1962 (August 1, 1962) restricts the use and possession of air guns, shot guns and similar weapons.

LOTTERIES AND GAMING ACT, 1962 (August 1, 1962) deals with the meaning of the words "private gain" in certain earlier Acts which permit lotteries or gaming for purposes other than private gain.

LOCAL GOVERNMENT (RECORDS) ACT, 1962 (October 1, 1962) amends the law relating to the functions of local authorities with respect to records in written or other form.

HOUSE OF COMMONS MEMBERS FUND ACT, 1962 (August 1, 1962) amends the investment powers of trustees of the House of Commons Members' Fund.

UGANDA INDEPENDENCE ACT, 1962 (October 9, 1962) confers independence on the Uganda Protectorate as from October 9, 1962.

TRINIDAD AND TOBAGO INDEPENDENCE ACT, 1962 (August 31, 1962) confers independence on Trinidad and Tobago as from August 31, 1962.

PENALTIES FOR DRUNKENNESS ACT, 1962 (September 1, 1962) increases the penalties for certain offences involving drunkenness.

LAW REFORM (HUSBAND AND WIFE) ACT, 1962 (August 1, 1962) enables a husband and wife to sue each other in tort, but gives the court a discretion to stay such an action if (*inter alia*) it appears that no substantial benefit will accrue from it.

APPROPRIATION ACT, 1962.

TRANSPORT ACT, 1962.

ROAD TRAFFIC ACT, 1962.

PIPELINES ACT, 1962.

EDUCATION (SCOTLAND) ACT, 1962.

FINANCE ACT, 1962.

BUILDING SOCIETIES ACT, 1962.

TOWN AND COUNTRY PLANNING ACT, 1962.

Government and Public Offices

The Civil Service in the United Kingdom is divided into classes, each with a series of grades. The *Administrative Class*, which consists largely of university graduates, advises Ministers on policy, deals with any difficulties arising from current policy and forecasts the probable effects of new measures and regulations. The *Executive Class* is responsible for the day to day conduct of Government business within the framework of established policy. The *Clerical Class* undertakes all the clerical work of departmental business, e.g. the preparation of accounts and keeping of records and the handling of particular claims in accordance with known rules. The *Professional, Scientific and Technical Classes* include doctors, lawyers, engineers, etc. *Departmental Classes*, confined to one or two departments, include the Tax Inspectorate, Factory Inspectorate and Customs Waterguard.

NOTE.—The salaries shown are in most cases those actually received. In certain instances, however, the National Scale without corresponding London weighting is given.

ADMIRALTY (see Royal Navy)

MINISTRY OF AGRICULTURE, FISHERIES AND FOOD

Whitehall Place, S.W.1. †
[Trafalgar: 7711]

The Ministry of Agriculture, Fisheries and Food was established in April 1955 and assumed the responsibilities previously discharged by the Ministry of Agriculture and Fisheries and the Ministry of Food.

The Ministry has a general responsibility for food supplies, both home produced and imported, and for food manufacture, distribution and storage.

It is responsible generally for the efficiency of the agricultural, horticultural and fishing industries in England and Wales; this involves:—grant and subsidy schemes and the provision of certain trading services; schemes designed to improve the quality of livestock and agricultural produce, to control or eradicate animal diseases, plant diseases, and pests, and to facilitate production on marginal land; market intelligence and technical advice on food production; research applied to agriculture, horticulture and fisheries, and land drainage, enforcement of agricultural wages awards, safety, welfare and labour supply. With other Government Departments, the Ministry is concerned with improving such rural services as housing, farm buildings, water supplies and electricity, with the supply of machinery, fertilisers and seeds and with land use. It is also concerned with the purchase and sale of land by the Minister and with general land management questions.

The Ministry administers, in England and Wales, the guarantees to farmers under the *Agriculture Acts, 1947 and 1957*, including deficiency payments schemes for fatstock and for the main cereal crops. It is also generally responsible for schemes for milk, eggs, potatoes and wool operated through producers' marketing boards.

The Ministry is concerned with the interests and development of the fishing industry in England and Wales, including the processing and distributive trades, whaling and research.

The Ministry has primary responsibility for administering part of the food and drugs legislation, in particular the composition of food, labelling and advertising. It is responsible for food research related to defence and for matters concerning slaughterhouses and meat inspection, and for legislation relating to the quality and cleanliness of milk; the Ministry maintains relations with Commonwealth and other countries and contributes to the work of a number of international bodies, in regard to agriculture and food.

The Ministry is also responsible for the Royal Botanic Gardens, Kew, and the Ordnance Survey Department.

Minister of Agriculture, Fisheries and Food, THE RT. HON. (ARTHUR) CHRISTOPHER (JOHN) SOAMES, C.B.E., M.P. £5,000
Private Sec., M. D. M. Franklin.

† Unless otherwise stated, Divisions of the Ministry are at this address.

Assistant Private Secs., J. H. Holroyd; Miss J. E. Arthur.

Parliamentary Sec., R. D. Williams, M.P. unpaid
Parliamentary Clerk, M. F. Grant. £1,568 to £1,947
Parliamentary Secretaries, The Lord St. Oswald, M.C.; J. S. R. Scott-Hopkins, M.P. £2,500
Permanent Secretary, Sir John Winnifrith, K.C.B. £7,015

Chief Scientific Advisers, (Agriculture) Professor H. G. Sanders, £5,015; (Food) Dr. H. R. Barnell £3,865
Liaison Officers, E. M. Howard; The Lord de Ramsey, T.D.; The Lord Hamilton of Dalzell, M.C.; Lt.-Col. F. G. W. Lane-Fox; The Earl of Malmesbury, T.D.; E. G. Parsons, H. G. Partridge; Col. N. V. Stopford Sackville, O.B.E., T.D.; Sir Donald Scott; R. W. Trumper, C.B.E.; Lt.-Col. Sir Richard Verdin, O.B.E., T.D.; Capt. N. G. Garnons Williams, M.B.E., R.N. (ret.); Lt.-Col. Sir Watkin Williams-Wynn, Bt., unpaid

Administrative Departments

GROUP A

Deputy Secretary, G. P. Humphreys-Davies, C.B. £5,015

SUB-GROUP (1)

Under Secretary, H. G. Button £4,115

LAND IMPROVEMENT DIVISION

Great Westminster House, Horseferry Road,

S.W.1

[Victoria: 8511]

Assistant Secretary, Miss I. O. H. Lepper £2,650 to £3,350
Principals, M. L. David; J. S. W. Henshaw; R. A. Thorne, M.B.E. £1,839 to £2,569
Senior Executive Officer, A. W. Bunn £1,568 to £1,947

AGRICULTURAL LAND SERVICE

Director, Maj. E. S. Dobb £4,115
Deputy Director, D. A. Hole, C.B.E. £3,415
Regional Land Commissioners, R. E. Dowse; F. G. Eaton-Evans; A. J. Langdon; R. G. A. Loft-house; T. J. Owen; C. Robiuson; J. R. Rundle; D. M. Sims; H. Walton £2,650 to £3,000
Chief Architect and Buildings Officer, F. W. Holder £3,065

Land Commissioners, W. T. Baker, T.D.; J. R. Booth, M.C.; R. G. Brighton; T. D. Cameron; H. Cartwright, T.D.; J. H. Dornie; D. H. Draper; J. H. L. Dunster; H. S. Dyer; F. C. Elliott; N. F. Flinn, M.B.E.; J. D. Foster; C. M. Green; N. K. Green; A. Halhead, O.B.E.; J. P. Harrison; J. F. Hoare; E. Hodgson; H. Hollinrake, O.B.E.; J. P. Jones; T. Jones; J. Keir; K. S. Lycett; J. L. McGrath; W. Magson; A. C. Middleton; B. H. Moore; H. G. Penfold; H. D. Pennington; A. K. J. Quinney; P. M. G. Riding; O. W. Rowntree, O.B.E.; G. T. Roy; R. F. Smith; J. F. Smithles; R. W. Soden, T.D.; R. H. Twinch; E. Vaughan; W. S. Waters; T. H. F. Whitton, T.D.; L. J. Williams; F. J. W. Winship; N. B. Wood £2,163 to £2,488

Senior Research Officer, D. J. Griffiths £1,785 to £2,434

LAND USE DIVISION

Great Westminster House, Horseferry Road,
S.W.1
[Victoria: 8511]

Assistant Secretary, G. L. Wilde.. £2,650 to £3,350
Principals, J. E. Dixon; Miss M. E. Vince; R. A. E. Williams, C.I.E..... £1,839 to £2,569
Chief Executive Officers, H. W. Durrant; R. A. Hughes, O.B.E..... £2,055 to £2,380
Senior Executive Officers, L. H. Glassberg; J. A. Walker..... £1,568 to £1,947

**LAND DRAINAGE, WATER SUPPLY,
AND MACHINERY DIVISION**

Great Westminster House, Horseferry Road,
S.W.1
[Victoria: 8511]

Assistant Secretary, J. Crooks.. £2,650 to £3,350
Principals, T. A. M. Croucher, O.B.E.; W. R. Small; D. White..... £1,839 to £2,569
Senior Executive Officers, C. W. Chapman; R. J. Crowe; Miss D. Hastings.... £1,568 to £1,947
Chief Drainage Engineer, E. A. G. Johnson, C.B.E.. £3 715
Deputy Chief Drainage Engineer, J. V. Spalding £2,650 to £3,000
Senior Drainage Engineers, Major F. D. Ashton; C. L. Clayton; G. Cole; T. C. Ketchen; K. T. H. Langton; R. H. Miers, M.B.E. £2,163 to £2,488
Principal Scientific Officer, A. N. Ede £1,785 to £2,515

SUB-GROUP (2)

Under Secretary, C. H. M. Wilcox..... £4,115

**ADVISORY SERVICE AND
INFESTATION CONTROL DIVISION**

Great Westminster House, Horseferry Road,
S.W.1

[Victoria: 8511]
Hook Rise South, Tolworth, Surbiton, Surrey
[Derwent: 6611]

Assistant Secretary A. B. Bartlett £2,650 to £3,350
Principals, F. A. Hitchens; H. N. White, C.B.E.. £1,839 to £2,569
Senior Executive Officers, Miss C. M. Marston; H. S. Newman..... £1,568 to £1,947
Architect, A. G. Jensen..... £1,514 to £2,028

**NATIONAL AGRICULTURAL
ADVISORY SERVICE**

Director, W. E. Jones..... £4,115
Senior Advisory Officers, P. H. Brown; N. H. Pizer; J. W. Reid, O.B.E..... £3,415
Chief Farm Management Advisory Officer, A. Jones (+ allee.) £2,825 to £3,125
Director of Experiments, P. J. Macfarlan £2,825 to £3,125
Chief Livestock Husbandry Advisory Officer, W. P. Dodgson..... £2,825 to £3,125
Deputy Chief Livestock Husbandry Advisory Officer, T. Allsop..... (+ allee.) £1,840 to £2,540
Chief Poultry Advisory Officer, R. Coles £2,825 to £3,125
Chief Farm Machinery Advisory Officer, C. Culpin O.B.E..... (+ allee.) £1,840 to £2,540
Regional Directors, J. H. Anderson; R. Bruce, O.B.E.; H. E. Evans; R. B. Ferro; E. Li. Harry, C.B.E.; N. F. McCann; E. RCA; D. H. Robinson £2,825 to £3,125

Deputy Regional Directors, H. Burr; M. Cohen; A. J. Davies; O. G. Dorey; S. L. Huthnance; W. S. Rayfield; W. R. Smith; F. W. Shepherd; O. G. Williams; T. W. Williamson (+ allee.) £1,840 to £2,540

County Advisory Officers, Grade I, D. C. Barber; E. A. Bartlett; J. C. M. Bearder; D. C. Bower; W. J. Brimacombe; D. M. Bryant; J. Butt-Evans; G. J. Clarke; V. Cory; P. E. Cross, O.B.E.; E. Davies; E. Davies; J. Davies, O.B.E.; D. S. Downey; R. Duncan; H. Edmunds; R. A. Engledow; E. J. Evans; J. V. Evans; A. H. Fitton; B. J. Fricker; J. Gibbons; H. J. Gill; E. G.

Griffiths; A. T. Haesler; W. H. Helme; P. Holmes; R. Hope; J. S. Hopkins; G. H. Hughes; J. H. Humphreys; P. M. T. Jones; W. H. Jones, O.B.E.; J. R. Judson; J. B. Kerr; J. R. Keyworth; A. L. Lewis; L. J. McHardy; A. Mann; J. C. Mann, O.B.E.; A. W. Marden; K. M. Pearman; G. Precious; A. W. Prowel; H. E. Roberts; E. Shaw; J. R. Stubbs; J. A. M. Sutherland; W. E. H. Telford; W. Bowen-Thomas; P. J. O. Trist, O.B.E.; M. Ward; L. M. Waud; J. Wilkie; H. M. Williams; T. Williamson £1,840 to £2,540

County Advisory Officers, Grade II, J. Hardy; J. D. Laurence; P. D. Lees; J. J. S. Webster £1,576 to £1,914

Grade I Advisory Officers:
Special Duties, W. M. O. Allcroft; R. Ede (+ allee.); J. A. Rudderham; R. E. Taylor £1,840 to £2,540

Bacteriologists, Miss E. R. Bird; J. W. Egddell; J. Harrison; Miss A. A. Nicholls; C. A. Scarlett; S. B. Thomas; C. H. Westwater £1,840 to £2,540

Crop Husbandry, D. W. Bcesley; W. Q. Connold; C. V. T. Dadd; H. Jackson; C. Kinsey, T. E. Miller; E. I. Prytherch; J. N. Sharrock £1,840 to £2,540

Entomologists, B. A. Cooper; J. H. Fidler; H. C. Gough; H. C. F. Newton; L. N. Staniland; J. D. Thomas; J. H. White £1,840 to £2,540

Farm Machinery, H. J. Hine; H. T. Horsman, M.B.E.; H. B. Huntley; F. C. Richards £1,840 to £2,540

Grassland Husbandry, S. Campbell; H. G. Chippendale; J. Davies; T. W. Evans; G. P. Hughes; D. J. C. Jones, O.B.E.; J. Jones; C. D. Price £1,840 to £2,540

Horticulture, L. F. Clift; K. V. Cramp; S. P. Craze; J. B. Duggan; W. S. English; J. W. Ewan; A. D. Harrison; W. G. Hume; P. S. Milnc; R. Peake; J. Rhodes; F. A. Roach; E. E. Skillman; B. D. A. Tucker; G. C. Williams..... £1,840 to £2,540

Livestock Husbandry, J. E. Campion; J. J. Fullbrook; R. J. Gayton; E. L. Jones; W. Longrigg; G. H. Proffitt, M.M.; G. E. G. Robinson; A. T. G. Trew; G. W. Whitehouse... £1,840 to £2,540

Milk Production, W. E. Buck; Miss D. M. Evans; J. Hutchison; Miss M. Jones; Miss K. D. Maddever, O.B.E.; Miss D. M. Phillips; Miss B. Thornborrow..... £1,840 to £2,540

Nutrition Chemists, S. M. Boden; A. Eden; J. Featherstone; J. R. Griffiths; W. Lewis; J. R. Lloyd; N. Trinder..... £1,840 to £2,540

Plant Pathologists, G. H. Brenchley; W. Campbell; H. E. Crossall; D. L. G. Davies; H. H. Glasscock; L. Ogilvie; I. F. Storcy..... £1,840 to £2,540

Poultry, G. E. Burkitt; W. Evans; R. F. Hall; Miss B. Lang; W. J. Lintin; Capt. M. C. Morgan; J. B. Morrison; G. E. Reddaway; I. W. Rhys; C. T. Riley; M. W. Taylor, M.B.E.; W. F. Wood £1,840 to £2,540

Soil Chemists, J. W. Blood; W. Dermott; J. B. E. Patterson; E. Roberts; T. H. Rose; J. E. Watkin; J. Webber; R. Williams, O.B.E. £1,840 to £2,540

EXPERIMENTAL HUSBANDRY FARMS
Directors, G. P. Chater; S. Culpin; W. M. R. Evans; P. N. Harvey; P. J. Jones; C. H. Mudd; M. Roberts; R. W. Shepherd; F. E. Shotton; E. T. Sykes; J. M. Willcock.. £1,840 to £2,540

EXPERIMENTAL HORTICULTURE
STATIONS
Directors, A. J. Bedding; S. P. Craze; H. J. Eaton; R. Gardiner; T. Laffin; J. M. S. Potter, O.B.E.; F. G. Smith..... £1,840 to £2,540

PLANT PATHOLOGY LABORATORY
Hatching Green, Harpenden
[Harpenden: 5241]

Deputy Chief Scientific Officer (Director), W. C. Moore, C.B.E..... £3,125 to £3,450
Senior Principal Scientific Officers, I. W. Prentice (Deputy Director); R. de B. Ashworth; F. H. Jacob £2,650 to £3,000

Principal Scientific Officers, E. C. Large; E. J. Miller; Miss F. J. H. Moore; A. H. Strickland; H. L. G. Stroyan.....£1,785 to £2,515

INFESTATION CONTROL LABORATORY

Hook Rise South, Tolworth, Surbiton, Surrey [Derwent: 6611]

Deputy Chief Scientific Officer, I. Thomas £3,125 to £3,450
Senior Principal Scientific Officers, J. A. Freeman, O.B.E.; E. E. Turtle, M.B.E. . . . £2,650 to £3,000
Principal Scientific Officers, E. W. Bentley; G. A. Brett; R. A. Davies; R. H. Thompson £1,785 to £2,515

FIELD RESEARCH STATION

Tangley Place, Worplesdon, Surrey [Worplesdon: 2581]

Principal Scientific Officer, H. V. Thompson £1,785 to £2,515

LABOUR, SAFETY AND SEEDS DIVISION

5/8 St. Andrew's Place N.W.1 [Welbeck: 7711]

Assistant Secretary, L. J. Smith . . . £2,650 to £3,350
Principals, Miss M. L. Dhonau, O.B.E.; R. F. Giles; R. C. Hinton £1,839 to £2,569
Chief Executive Officer, S. R. Males £2,055 to £2,380
Senior Executive Officer, Mrs. P. E. Holloway £1,568 to £1,947
Safety Inspectorate:
Chief Inspector, J. W. Holliday £2,483
Deputy Chief Inspector, G. S. Wilson £2,055 to £2,380

INFORMATION AND INVESTIGATION DIVISION

Assistant Secretary, J. A. Barrah . . . £2,650 to £3,350
Assistant Director, Major-Gen. H. L. Davies, C.B., C.B.E., D.S.O., M.C. £2,055 to £2,380
Principal, C. H. Shillito £1,839 to £2,569
Chief Executive Officers, G. Carmichael, O.B.E.; T. A. McDowell, M.B.E. (Press Officer) £2,055 to £2,380
Senior Executive Officers, S. R. O'Hanlon, M.B.E.; Miss G. E. Pegler, M.B.E. £1,568 to £1,947
Librarian (Grade 1), F. C. Hirst . . . £2,055 to £2,380

GRASSLAND AND CROP IMPROVEMENT DIVISION

Assistant Secretary, B. I. Felton . . . £2,650 to £3,350
Principals, W. T. Barker; M. B. Casey; F. R. Williams, I.S.O. £1,839 to £2,569
Chief Executive Officer, K. T. Wasley £2,055 to £2,380
Senior Executive Officer, C. L. Huntingford, M.B.E. £1,568 to £1,947
Chief Technical Officer, G. L. Gray £2,106 to £2,288

SUB-GROUP (3)

Under Secretary, J. Hensley £4,115

ANIMAL HEALTH DIVISION

Hook Rise South, Tolworth, Surbiton, Surrey [Derwent: 6611]

Assistant Secretary, J. G. Carnochan £2,650 to £3,350
Principal, L. Hurst £1,839 to £2,569
Chief Executive Officers, W. E. Crump; I. P. M. Macdonald £2,055 to £2,380
Chief Veterinary Officer, Sir John Ritchie, C.B. £4,110

Deputy Chief Veterinary Officers, D. S. Barbour; A. G. Beynon; I. Reid; J. C. Wallace . . . £3,350
Regional Veterinary Officers, H. B. Allan; J. Cameron; E. Clark; B. A. Claxton; E. R. Corrigan; H. M. M. Duff; K. A. Forker; A. M. Graham; J. R. Kerr; W. D. Macrae; E. G. Morris;

J. W. R. Pearce; James Reid; J. W. Simpson; G. Tullis; A. M. Urquhart; J. Weir

£2,825 to £3,125
Deputy Regional Veterinary Officers, Lt.-Col. J. C. Bennison, T.D.; A. C. L. Brown; D. Cameron; A. D. Campbell; J. K. S. Elmslie; W. Grant; E. F. Hardwick; A. Kelly; A. M. K. McLeod; E. P. Thorne; W. W. Wilson £2,775
Divisional Veterinary Officers: F. H. Addison; A. Alexander; J. R. Anderson; J. C. Baird; P. Baird; N. M. Barrie; G. S. Beattie; J. Brennan; J. M. Brown; D. K. Bryson; D. E. Callender; S. R. Campbell; E. T. Camps; T. D. Carrigan; G. S. R. Chalmers; C. Christie; D. M. Cochrane; H. Cremlyn-Hughes; J. G. Crowhurst; D. B. Davies; J. A. de Garis; D. J. Drummond; R. Dudleyke; R. P. Duffy; F. Dunlop; W. H. Dymock; T. H. Ewart; J. H. Findlay; J. M. Fraser; A. C. Gillespie; C. J. N. Godfrey; F. A. Gordon; J. A. Graham; H. C. Gregory; I. H. Green; E. G. Griffith; Lt.-Col. J. B. Griffiths, M.B.E.; A. Hamilton; P. Harvey; M. Herlihy; F. J. Hill; T. T. Hunter; H. M. John; D. Johnston; T. Johnston; D. K. Jones; Lt.-Col. L. L. Jones; H. N. Kennedy; R. S. Kyle; H. P. Lightfoot; R. C. Locke; E. Lowes; D. J. Macaulay; D. H. Macdonald; H. McEnhill; W. J. McIlroy; W. S. Mackay; J. M. McKellar; J. J. McLaren; J. D. McLaughlan; R. McNeill; R. J. Macrae; P. M. Marshall; R. T. H. Massey; R. C. Matheson; M. H. W. Miller; G. A. Moore; A. L. F. Mullen; R. B. T. Munro; G. Ord; L. E. Perkins; G. F. Pickering; R. A. Richards; R. W. Ross; H. M. Salusbury; S. AGRICULTURAL LAND COMMISSION

26 Sussex Place, Regent's Park, N.W.1

[Ambassador: 1631]

The Agricultural Land Commission, set up under the *Agriculture Act, 1947*, is responsible for the management of land vested in the Minister of Agriculture, Fisheries and Food, or for which he has become responsible (105,955 acres approx.). The Commission advises the Minister in matters relating to the management of agricultural land and on the exercise of his powers of compulsory purchase under the Act, to ensure the full and efficient use of agricultural land.

Chairman (part-time), Sir Frederick Burrows, G.C.S.I., G.C.I.E. £1,500

Deputy-Chairman (part-time) and Chairman of Welsh Sub-Commission, Col. J. C. Wynne Finch, C.B.E., M.C. £1,000

Other Commissioners (part-time), W. C. Farnsworth, C.B.E.; Sir Francis Verne Wylie, G.C.I.E., K.C.S.I. each £500

Secretary, C. Gallehawk, I.S.O. . . . £1,976 to £2,288

Land Agent, J. R. Lee (+ *alice*) . . . £2,680 to £2,392

Welsh Sub-Commissioners (part-time), J. Gwyn Jones; Prof. R. Alun Roberts, C.B.E., Ph.D.; J. N. Vaughan Richards, T.D. each £500

Secretary (Welsh Sub-Commission), R. Davies £1,508 to £1,872

Land Agent (do.), E. O. Hughes (+ *alice*) £1,456 to £1,950

AGRICULTURAL RESEARCH COUNCIL

Cunard Building, 15 Regent Street, S.W.1

The Agricultural Research Council was incorporated by Royal Charter on July 23, 1931. In accordance with the provisions of the *Agricultural Research Act, 1956*, the Council is charged, under a Committee of the Privy Council, with the organization and development of agricultural and food research and may, in particular, establish or develop institutions or departments of institutions and make grants for investigation and research relating to the advance of agriculture. The Council's finance is, under the 1956 Act, derived from the Agricultural Research Fund into which monies provided by Parliament for the purpose of the Act, and other sums received by the Council, are paid.

Council. The Duke of Northumberland, K.G. (*Chairman*); Sir David Lowe, C.B.E., F.R.S.E. (*Deputy Chairman*); J. D. Alston; Prof. T. A. Bennet-Clark, Ph.D., F.R.S.; Prof. F. W. R. Brambell, D.Sc., Ph.D., F.R.S.; H. G. Button; Major J. E. M. Dugdale, T.D.; Prof. A. C. Frazer, C.B.E., M.D., D.Sc., Ph.D.; R. E. Glover, D.Sc.; Prof. J. E. Harris, C.B.E., Ph.D., F.R.S.; Prof. J. W. Howie; Prof. Sir Hans Krebs, M.D., D.Sc., F.R.S.; The Lord Netherthorpe; Sir John Ritchie, C.B., F.R.S.E.; Prof. A. Robertson, Ph.D., LL.D., F.R.S.; H. G. Sanders, Ph.D.; W. H. Senior, F.R.S.E.; Prof. S. J. Watson, C.B.E., D.Sc., F.R.S.E.; Prof. W. T. Williams, D.S.C., Ph.D.

Secretary, E. G. Cox, T.D., D.Sc., F.R.S.

Deputy Secretary, W. G. Alexander, C.B.E.

Assistant Secretaries, W. E. Berry, Ph.D.; E. D. T. Jourdain; A. Oates.

Scientific Assistants to the Secretary, E. E. Chesman, D.Sc.; R. Scarisbrick, Ph.D.; J. Lamb, O.B.E.; F. H. Moulit; D. Rudd Jones, Ph.D.

Principals, F. J. S. Culley; E. D. Hardy; L. S. Porter.

Chief Executive Officers, F. V. Bird; J. H. Shimwell.

Senior Executive Officers, M. R. Beauchamp; K. H. J. Clarke.

For the Research Institutes under the control of the council, see *Index*.

EXECUTIVE COUNCIL OF THE COMMONWEALTH AGRICULTURAL BUREAUX

Farnham House, Farnham Royal, Bucks.

This Commonwealth organization, governed by an Executive Council composed of nominees of the various Commonwealth Governments, and of the Colonial Office, was set up in 1929 to administer bureaux organized to act as clearing houses of information on research in eight specialized fields of agricultural science, and financed from a common fund provided by the Governments of the Commonwealth. The Governments of the Commonwealth and Empire instructed it in 1933 to supervise the administration and finances of the Commonwealth (formerly Imperial) Institute of Entomology, the Commonwealth (formerly Imperial) Mycological Institute and the Commonwealth Institute of Biological Control (formerly the Imperial Parasite Service), and in 1937 to organize bureaux for Forestry and Dairy Science. The Annual Reports of the Council are submitted to each of the Governments through their several members on the Council. The bureaux are attached to appropriate research institutions, but are distinct from them.

Chairman, V. Armstrong, Ph.D.

Vice-Chairman, W. G. Alexander, C.B.E.

Secretary, Sir Thomas Scrivenor, C.M.G.

Institutes

Commonwealth Institute of Entomology, Natural History Museum, S.W.7. *Director*, E. O. Pearson.

Commonwealth Mycological Institute, Ferry Lane, Kew, Surrey. *Director*, J. C. Hopkins, C.M.G., D.Sc.

Commonwealth Institute of Biological Control, c/o Faculty of Agriculture (I.C.T.A.), University College of the West Indies, St. Augustine, Trinidad. *Director*, F. J. Simmonds, D.Sc.

Bureaux

Animal Breeding and Genetics, Institute of Animal Genetics, King's Buildings, West Mains Road, Edinburgh 9, Scotland.—*Director*, J. P. Maule.

Animal Health, Central Veterinary Laboratory, New Haw, Weybridge, Surrey.—*Director*, M. Crawford.

Animal Nutrition, Rowett Research Institute Bucksburn, Ab Aberdeen, Scotland.—*Director*, D. Harvey, Ph.D.

Dairy Science and Technology, National Institute for Research in Dairying, Shinfield, nr. Reading.—*Director*, E. J. Mann.

Forestry, Commonwealth Forestry Institute, South Parks Road, Oxford.—*Director*, F. C. Ford Robertson, O.B.E.

Helminthology, The White House, 103 St. Peter's Street, St. Albans, Herts.—*Director*, Miss S. M. Willmott, Ph.D.

Horticulture and Plantation Crops, East Malling Research Station, East Malling, nr. Maidstone, Kent.—*Director*, G. K. Argles.

Commonwealth Bureau of Pastures and Field Crops, Hurley, nr. Maidenhead, Berks.—*Director*, A. G. G. Hill.

Plant Breeding and Genetics, School of Agriculture, Downing Street, Cambridge.—*Director*, P. S. Hudson, O.B.E., Ph.D.

Soils, Rothamsted Experimental Station, Harpenden, Herts.—*Director*, G. V. Jacks.

AIR MINISTRY

(see Royal Air Force)

AIR REGISTRATION BOARD

Chancery House, Chancery Lane, W.C.2

[Chancery: 28r1]

Set up on Feb. 26, 1937, under the *Companies Act*, the Board is an autonomous non-profit making limited company. Delegated to the Board are certain powers relating to the design, construction and maintenance of civil aircraft; investigation by surveyors of aircraft and associated equipment for the purpose of recommending to the Minister concerning issues and renewals of certificates of airworthiness. The Board also conducts technical examinations for licences of aircraft maintenance engineers, flight engineers and commercial pilots.

Chairman, Lord Brabazon of Tara, P.C., G.B.E., M.C.

Secretary, R. E. Hardingham, C.M.G., O.B.E.

AIR TRANSPORT LICENSING BOARD

Therese House, 29-30 Glasshouse Yard,

Aldersgate Street, E.C.1.

[Clerkenwell: 884r]

Established by the *Civil Aviation (Licensing) Act*, 1960, to license air services (with certain exceptions). The Board considers representations in relation to air transport services by U.K. registered aircraft, or to facilities, tariffs or charges in connection therewith, reporting their conclusions and recommendations to the Minister of Aviation.

Chairman, D. T. Jack, C.B.E. £5,000
Deputy Chairman, J. J. Taylor, O.B.E. £3,500
Members, Prof. R. G. D. Allen, C.B.E.; F. C. Bagnall, C.B.E.; E. Baldry, O.B.E.; C. P. Harvey, Q.C.; Sir Friston How, C.B.; W. P. James, O.B.E.; A. H. Wilson, C.B., C.B.E.

each 15 gns. per session
Secretary, J. E. Barnes £2,715 to £3,415

COLLEGE OF ARMS OR HERALDS
COLLEGE

Queen Victoria Street, E.C.4

[City: 276z]

The College of Arms is open daily from 10-4 when an Officer of Arms is in attendance to deal with enquiries by the public, though such enquiries may also be directed to any of the Officers of Arms, either personally or by letter.

There are 13 officers of the College, 3 Kings of Arms, 6 Heralds and 4 Pursuivants, who specialise in genealogical and heraldic work for their respective clients. The College possesses the finest records on these subjects in the world. It is the official repository of the Arms and pedigrees of English, Northern Irish, and Commonwealth families and their descendants, and its records include official copies of the records of Ulster King of Arms, the originals of which remain in Dublin.

Arms have been and still are granted by Letters Patent from the Kings of Arms under Authority delegated to them by the Sovereign, such authority having been expressly conferred on them since at least the fifteenth century. A right to Arms can only be established by the registration in the official records of the College of Arms of a pedigree showing direct male line descent from an ancestor already appearing therein as being entitled to Arms, or by making application to the College of Arms for a Grant of Arms.

Earl Marshal, His Grace the Duke of Norfolk, K.G., P.C., G.C.V.O., Royal Victorian Chain.

Kings of Arms

Garter, Sir Anthony Richard Wagner, K.C.V.O., D.Lit., F.S.A.

Clarenceux, Sir John Dunamace Heaton-Armstrong, M.V.O.

Norroy and Ulster, Aubrey John Toppin, C.V.O., F.S.A.

Heralds

WindSOR, Richard Preston Graham-Vivian, M.V.O., M.C.

Somerset, Michael Roger Trappes-Lomax.

Lancaster (and Registrar), John Riddell Bromhead

Walker, M.V.O., M.C.

York, The Lord Sinclair, M.V.O.

Chester, Walter John George Verco, M.V.O. (*Earl Marshal's Secretary*).

Richmond (vacant).

Pursuivants

Rouge Dragon, Robin de la Lanne Mirrlees.

Bluemantle, John Philip Brooke Brooke-Little.

Portcullis, Alexander Colin Cole.

Rouge Croix, Lt.-Col. Rodney Onslow Dennys.

COURT OF THE LORD LYON

H.M. Register House, Edinburgh

[Edinburgh: 30r37]

The Scottish Court of Chivalry, including the genealogical jurisdiction of the *Ri-Semachie* of Scotland's Celtic Kings, adjudicates rights to arms and administration of *The Scottish Public Register of All Arms and Bearings* (under 1672 cap. 47) and *Public Register of All Genealogies*. The Lord Lyon presides and judicially establishes rights to existing arms or succession to Chiefship, or for cadets with scientific "differences" showing position in clan or family. Pedigrees are also established by decrees of Lyon Court, and by Letters Patent. As *Royal Commissioner in Armory*, he grants Patents of Arms (which constitute the grantee and heirs noble in the Noblesse of Scotland) to "virtuous and well-deserving" Scotsmen, and petitioners (personal or corporate) in Her Majesty's overseas realms of Scottish connection, and issues birth-privileges. In Scots Law, Arms are protected by Statute; their usurpation is punishable, and the Registration Fees of Honour on patents (£50) and matriculations (£20) are payable to H.M. Exchequer.

Lord Lyon King of Arms, Sir Thomas Innes of Learney, K.C.V.O., LL.D., F.S.A.Scot., Advocate
 £1,200

Three Heralds (£25 each)

Rothesay, Lt.-Col. H. A. B. Lawson, F.S.A.Scot.

Marchmont, James Monteith Grant, W.S.

Albany, Sir Iain Moncreiffe of that Ilk, Bt., Ph.D., Advocate.

Three Pursuivants (£16 13s. 4d. each)

Kintyre, Charles Eliot Jauncey, Advocate.

Carrick Malcolm Rognavd Innes of Edingight, F.S.A., Scot.

Unicorn, John Inglis Drever Pottinger.

Lyon Clerk and Keeper of Records, Harold Andrew Balvaird Lawson. £900

Procurator-Fiscal, Ivor Reginald Guild, W.S.

Herald Painter, Mrs. Katherine Chart.

Macer, Thomas C. Gray.

ART GALLERIES, ETC.

ROYAL FINE ART COMMISSION

5 Old Palace Yard, S.W.1

[Whitehall: 3935]

Appointed in May, 1924, "to enquire into such questions of public amenity or of artistic importance as may be referred to them from time to time by any of our Departments of State, and to report thereon to such Department; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies, where it appears to the said Commission that their assistance would be advantageous." In August, 1933, a Royal Warrant extended the Terms of Reference of the Commission—"so that it shall also be open to the said Commission, if they so desire, to call the attention of any of our Departments of State, or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the said Commission may appear to affect amenities of a national or public character"; in May, 1946, a Royal Warrant further extended

the Terms of Reference of the Commission as follows:—

We Do give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever: We Do authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid:

Chairman, The Lord Bridges, P.C., G.C.B., G.C.V.O., M.C., F.R.S.

Commissioners, Sir Colin Anderson; John Betjeman, C.B.E.; Hon. Lionel Brett; Sir Hugh Casson; Howard Colvin; Prof. R. Llewelyn Davies, F.R.I.B.A.; Raymond Erith, A.R.A.; Arthur Floyd, C.B.E.; Frederick Gibberd, C.B.E., A.R.A.; Sir William Holford, A.R.A.; G. A. Jellicoe, C.B.E.; Sir Leslie Martin; Henry Moore, C.H.; John Piper; Sir Edward Playfair, K.C.B.; J. M. Richards, C.B.E.; Sir Basil Spence, O.B.E., T.D., R.A.

Secretary, Hon. Godfrey Samuel.

ROYAL FINE ART COMMISSION FOR SCOTLAND

51 Melville Street,
Edinburgh 3

[Edinburgh Caledonian: 5434]

Appointed in 1927 "to enquire into such questions of public amenity or of artistic importance relating to Scotland as may be referred to them by any of our Departments of State, and to report thereon to such Departments; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies when it appears to the said Commission that their assistance would be advantageous." Under Royal Warrant of May 8, 1953, the terms of reference of the Commission were extended so that it is now open to the Commission, if it so desires, to call the attention of any Department of State or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the Commission may appear to affect amenities of a national or public character; and to call before it any persons, examine any documents or visit any places it might deem expedient for the more effectual carrying out of its duties.

Commissioners, Sir Hector Hetherington, G.B.E. (*Chairman*); J. L. Gleave, R.S.A.; C. d'O. Pilkington Jackson, A.R.S.A., F.R.S.A.; W. H. Kinlmonth, R.S.A., F.R.I.B.A.; I. G. Lindsay, O.B.E., R.S.A., F.R.I.B.A.; The Hon. Lady MacGregor of MacGregor, O.B.E.; Sir Robert Matthew, C.B.E., A.R.S.A., F.R.I.B.A.; J. Cameron Small, O.B.E., U.D., F.R.S.E.

Secretary, Lt.-Col. J. T. Bannatyne, M.B.E.

NATIONAL GALLERY

Trafalgar Square, W.C.2

[Whitehall: 7618-9]

Hours of opening.—Weekdays 10 to 6 (June–Sept., Tuesdays and Thursdays 10 to 9), Sundays 2 to 6. Admission free. Closed on Good Friday, Christmas Eve, and Christmas Day.

The National Gallery is the result of a Parliamentary grant of £60,000 in 1824 for the purchase and Exhibition of the Angerstein collection of pictures, the present building being opened in 1838 and enlarged in 1876, 1887, 1911, 1928, 1930, 1937 and 1961. Expenses for 1962–63 were estimated at £230,000.

TRUSTEES

The Lord Robbins, C.B., F.B.A. (*Chairman*); Henry Moore, C.H.; Denis Mahon; Sir William Coldstream, C.B.E.; The Viscount Chandos, P.C., D.S.O., M.C.; The Marquess of Salisbury, K.G.,

P.C., F.R.S.; The Earl of Plymouth; The Duke of Devonshire, M.C.; Miss C. V. Wedgwood, C.B.E.; Sir Patrick Linstead, C.B.E. F.R.S., D.S.C.; Sir Karl Parker, C.B.E., Ph.D.

OFFICERS

Director, Sir Philip Hendy £4,100
Keeper, M. Davies £2,700 to £3,050
Deputy Keeper, C. H. M. Gould £2,283 to £2,650
Scientific Adviser to the Trustees, R. H. G. Thomson £2,283 to £2,650
Assistant Keepers, M. V. Levey; G. H. D. Martin £1,321 to £2,226
Chief Restorer, A. W. Lucas £2,231 to £2,571

NATIONAL PORTRAIT GALLERY

St. Martin's Place, Charing Cross Road, W.C.2

[Whitehall: 8511]

Open Monday to Friday 10 to 5. Saturday 10 to 6. Sunday 2 to 6.

The first grant was made in 1856 to form a gallery of the portraits of the most eminent persons in British history, the collections being successively housed in Great George Street, Westminster, in South Kensington, and in Bethnal Green. The present building was opened in 1896. £80,000 being contributed to its cost by Mr. W. H. Alexander; an extension erected at the expense of Lord Duveen was opened in 1933. The amount for salaries and expenses, including a grant of £4,100 for purchase of portraits, was estimated at £46,000 for 1962–63.

Director, Keeper and Secretary, C. K. Adams, C.B.E.

Assistant Keepers (I), D. T. Piper; J. F. Kerlake £3,225
£1,321 to £2,226

TATE GALLERY

Millbank, S.W.1

[Tate Gallery: 4444]

Hours of opening.—Weekdays 10 to 6. Sundays 2 to 6. Admission free, except to certain temporary exhibitions. Closed on Good Friday, Christmas Eve, and Christmas Day.

The Tate Gallery, which constitutes the National Collection of British painting, of modern foreign painting and of modern sculpture, was opened in 1897, the cost of erection (£80,000), being defrayed by the late Sir Henry Tate, who also contributed the nucleus of the present collection. The *Turner Wing*, built at the expense of Sir Joseph Duveen and his son, Lord Duveen, was opened in 1910. There are also special collections by Blake, Watts and Alfred Stevens. Lord Duveen also defrayed the cost of galleries to contain the collection of modern foreign painting, completed in 1926, and a new sculpture hall, completed in 1937. Expenses for 1962–63 were estimated at £103,000.

Director, Sir John Rothenstein, C.B.E., Ph.D. £3,700
Keeper, N. R. Reid £2,715 to £3,065
Deputy Keeper, R. E. Alley £2,348 to £2,715
Assistant Keepers (Grade I), Mary Chamot; Judith Cloak; D. L. A. Farr; M. R. F. Butlin.

Chief Restorer, S. Slabczynski £1,381 to £2,290
£2,296 to £2,636

WALLACE COLLECTION

Hertford House Manchester Square, W.1

[Welbeck: 0687-8]

Admission free. Open on weekdays 10 a.m. to 5 p.m.; Sundays 2 p.m. to 5 p.m. Closed on Good Friday, Christmas Eve and Christmas Day.

The Wallace Collection was bequeathed to the nation by the widow of Sir Richard Wallace, Bt., K.C.B., M.P., on her death in 1897, and Hertford House was subsequently acquired by the Government. The collection includes pictures, drawings and miniatures, French furniture, sculpture, bronzes, porcelain, armour and miscellaneous objects d'art. The total net expenses were estimated at £49,000 in 1962–63.

Director, Sir James Mann, K.C.V.O. £3,065
Assistant Directors, F. J. B. Watson; R. A. Cecil

£1,386 to £2,291

**UNITED KINGDOM ATOMIC ENERGY
 AUTHORITY**

11 Charles II Street, S.W.1

[Whitehall: 6262]

Established by the *Atomic Energy Authority Act, 1954*, the Authority took over, on August 1, 1954, the control of atomic energy research and development. The Minister for Science is responsible to Parliament for general atomic energy policy and for money provided for the Authority.

The Authority is organized in five groups, as shown below:—

(a) the *Research Group*. The Research Establishment at Harwell, Berks., conducts fundamental research into nuclear physics and atomic energy and provides information to the other establishments. It includes the Isotope School (1951) and Reactor School (1954). The Radiochemical Centre at Amersham, Bucks., prepares radio-active substances such as radium, radon and isotopes produced in the atomic reactors, for medical, scientific and industrial purposes.

(b) the *Weapons Group*. Research work on atomic weapons is carried on at the Research Establishment, Aldermaston, Berks.

(c) the *Reactor Group*. Responsible for the design, construction and development of nuclear power reactors, including the Dounreay Experimental Reactor at Caithness, the Advanced Gas-cooled Reactor experiment at Windscale, Cumberland, and the Atomic Energy Establishment at Winfrith, Dorset. It also acts as engineering consultant for the Electricity Boards, overseas organisations and the British Consortia formed for the building of nuclear power stations. Headquarters are at Risley, Lancs.

(d) the *Production Group*. Responsible for the operation of the nuclear reactors at Calder Hall and Chapelcross and for management of the uranium and plutonium production factories at Springfields in Lancashire, Windscale, and Capenhurst in Cheshire. Consults with industry on the sale of nuclear fuel exploitation patents and other commercial activities. Headquarters of the Group are at Risley.

(e) the *Engineering Group*. Responsible for the design and construction of Authority plants, works and buildings and for the design and inspection of fuel elements for production purposes. Headquarters are at Risley.

Chairman, Sir Roger Makins, G.C.B., G.C.M.G.
 £10,000

Vice-Chairman, Sir William Penney, K.B.E., F.R.S.
 £8,000

Members (Full-time), Sir William Cook, C.B., F.R.S. (Reactors); Sir Alan Hitchman, K.C.B. (Finance and Administration). each £7,500

Air Chief Marshal Sir Claude Pelly, G.B.E., K.C.B., M.C. (*Weapons Research and Development*). £6,500
 (Part-time) Sir John Cockcroft, O.M., K.C.B., C.B.E., F.R.S. £3,000

The Lord Citrine, P.C., G.B.E.; Prof. A. H. Cottrell, F.R.S.; C. F. Kearton, O.B.E., F.R.S.; Sir James Chadwick, M.D., F.R.S.; S. J. Pears; A. R. M. Geddes, O.B.E.; Sir Leonard Owen, C.B.E. (*Production and Engineering*). . . each £1,000
 Secretary, D. E. H. Peirson.

MINISTRY OF AVIATION

Shell Mex House, Strand, W.C.2

[Temple Bar: 1207]

The Ministry of Aviation is responsible for the supply of aircraft to the Services and undertakes research on and development of aircraft, electronic equipment, etc., for the Services, and of certain classes of equipment for civil use, e.g., civil aircraft and industrial gas turbines. The Ministry undertakes the organization, implementation and encouragement of measures for the development of civil aviation; the promotion of safety and efficiency in the use of aircraft; research concerning navigation and operation of civil aircraft; general oversight of the activities of the Air Corporations; the investigation of aircraft accidents; the licensing and supervision of training arrangements for aircrews; the operation of over thirty civil aerodromes, air traffic control and telecommunications services.

Minister of Aviation, THE RT. HON. JULIAN AMERY, M.P. £5,000

Private Secretary, D. A. Lovelock

Assistant Private Secretary, C. B. Benjamin.

Parliamentary Private Secretary, Wing Cdr. E. E. Bullus, M.P. unpaid

Parliamentary Secretary, B. R. Z. de Ferranti, M.P.
 £2,500

Permanent Secretary, Sir Henry Hardman, K.C.B.
 £7,015

Private Secretary, M. G. Pctter.

Deputy Secretary (A.), J. M. Wilson, C.B. . . . £5,015

Deputy Secretary (B.), M. M. V. Custance, C.B.
 £5,015

Deputy Secretary (C.), D. W. G. L. Haviland, C.B.
 £5,015

Controller of Aircraft, Sir George Gardner, K.B.E., C.B., D.Sc. £4,950

Deputy Controller of Aircraft (Royal Navy), Rear Admiral J. A. Ievcvs, C.B., O.B.E.

Deputy Controller of Aircraft (Royal Air Force), Air Vice-Marshal C. Scragg, C.B., C.B.E., A.F.C.

Deputy Controller of Aircraft (Research and Development), M. B. Morgan, C.B. £4,350

Director-General of Flying (Research and Development), Air Vice-Marshal C. D. C. Boycc, C.B., C.B.E. (ret.) £2,800

Controller of Guided Weapons and Electronics, Air Marshal, E. M. F. Grundy, C.B., C.B.E.

Deputy Controller of Electronics, Air Vice-Marshal T. U. C. Shirley, C.B., C.B.E.

Director-General Atomic Weapons, L. T. D. Williams, C.M.G. £4,950

Directors, W. J. Brown, O.B.E.; S. A. Hunwicks, O.B.E. £3,125 to £3,450

Chief Executive, Air Traffic Control, Air Vice-Marshal Sir Laurence Sinclair, G.C., K.C.B., C.B.E., D.S.O. (ret.) £4,475

Chief Scientist, Sir Robert Cockburn, K.B.E., C.B.
 £5,750

BRITISH OVERSEAS AIRWAYS CORPORATION

B.O.A.C. Headquarters, London Airport,
 Hounslow, Middlesex
 [Skyport: 5511]

Established in 1939, British Overseas Airways
 Corporation acquired, on April 1, 1940, the air
 transport undertakings of Imperial Airways and
 British Airways, which had been at the disposal of
 the Secretary of State for Air since the outbreak
 of war.

B.O.A.C. is the larger of the two Government
 Corporations which are charged with the task of
 developing and operating British scheduled air
 transport services under the provisions of the Air
 Corporations Act, 1949. Its functions are to
 operate the Commonwealth, North Atlantic,
 South Atlantic and Far Eastern routes from the
 United Kingdom. In June, 1962, the Corporation
 was operating about 80 routes, with a total gross
 service mileage of just over 500,000. On these
 routes there were more than 150 services weekly in
 each direction.

The members of the Corporation are appointed
 by the Minister of Aviation.

Chairman, Rear-Admiral Sir Matthew Slattery,
 K.B.E., C.B. (allowances £1,000).....£8,500
 Deputy Chairman (part-time), Sir Wilfred Neden,
 C.B., C.B.E. (allowances £250).....£3,500
 Managing Director, Sir Basil Smallpeice, K.C.V.O.

BRITISH TRANSPORT COMMISSION

222 Marylebone Road, N.W.1
 [Hunter: 1272]

The British Transport Commission was estab-
 lished as a public authority under the provisions of
 the Transport Act, 1947. On Jan. 1, 1948, the main-
 line railways of Great Britain, together with their
 ancillary services, the smaller railway undertakings
 previously under the jurisdiction of the Railway
 Executive Committee, the railways and road ser-
 vices formerly controlled by the London Passenger
 Transport Board, and various canal and inland
 waterway undertakings specified in the Act, were
 vested in the Commission. In accordance with the
 1947 Act the Commission acquired road haulage
 undertakings which in 1946 were engaged in
 carriage of goods involving routes of 40 miles, or
 upwards and necessitating journeys beyond a

25 miles radius from the operating centre. Under the provisions of the *Transport Act, 1953*, however, the Commission was required to dispose of a major part of the property held by it for the purposes of the part of its undertaking carried on through the Road Haulage Executive.

The *Transport Act, 1962*, under which the undertaking of the British Transport Commission will be reorganized, received the Royal Assent on August 1, 1962. The Act provides for the abolition of the Commission and the establishment of four separate Boards for British Railways, London Transport, Docks and Waterways, and a Holding Company which will take over the ownership of the Commission's road haulage and road passenger interests.

BRITISH TRAVEL AND HOLIDAYS ASSOCIATION

Headquarters and Tourist Information Centre:
Queen's House, 64/65 St. James's Street, S.W.1
[Mayfair: 9191]

Overseas Offices

British Travel Association: 680 Fifth Avenue, New York 19; 39 South La Salle Street, Chicago 3; 606 South Hill Street, Los Angeles 14; 50 Young Street, Sydney; 151 Bloor Street West, Toronto; 661 Howe Street, Vancouver; 6 Place Vendôme, Paris; 22 Neue Mainzerstrasse, Frankfurt/Main; Leidseplein 29, Amsterdam; Norrmalmstorg 1, Stockholm C; Avda. Santa Fé 854, Buenos Aires; Rua Aurora 960, Salas 2-3, Sao Paulo; 252 Jippe Street, Johannesburg; 41 Boulevard Adolphe Max, Brussels; 21A Via Torino, Rome.

The functions of the Association can be summarized as follows: (a) to increase the number of visitors from overseas and (b) to ensure that overseas visitors and home holiday makers are well received and accommodated and have the best facilities that can be provided. The Association is a Company limited by guarantee and registered under the Companies Act and draws its membership from all sections of the tourist and holiday industry. The Association is supported by H.M. Government and receives a Grant-in-Aid from the Board of Trade. The Board consists of a Chairman who is appointed by the President of the Board of Trade, and 19 members, 8 of whom are nominated by the President of the Board of Trade; 7 are elected by the members of the Association and the remainder nominated by the Scottish Tourist Board (2), the Welsh Tourist and Holidays Board (1) and the Northern Ireland Tourist Board (1). Four additional members representing the various interests concerned with travel and holidays in the United Kingdom may be appointed. The Board has the advice of 3 main Committees: the Finance and General Purposes Committee, Overseas Committee and the Home Committee, whose Chairmen are drawn from the Board. The Overseas and Home Committees draw a proportion of their membership from the Board and the remainder from interested organizations. *Chairman*, The Lord Mabane, P.C., K.B.E. *Director-General*, J. G. Bridges, O.B.E. *General Manager*, L. J. Lickorish.

CABLE AND WIRELESS LIMITED

Head Office—Mercury House, Theobald's Road,
W.C.1

[Chancery: 4433]

Under the Commonwealth Telegraphs Act 1949, the assets of the telecommunications services conducted by Cable and Wireless, Ltd., in the United Kingdom were transferred to the Post Office. The company, however, continues to be responsible for the operation of its telecommunications services overseas and to own the assets relative to those services.

Cable and Wireless, Ltd., with its associated companies, operates overseas telecommunications services, comprising 134,000 nautical miles of submarine telegraph cables and wireless circuits spanning 200,000 miles. Its operations include telegraphy (cable and radio), phototelegraphy, radiotelephony, ship-shore radiotelegraphy including direction finding, aeronautical wireless facilities, internal telephone systems. There are 97 branches overseas, a Cable Station and Training School in the United Kingdom and a fleet of 7 cable ships. It is responsible for financing, laying and maintaining the U.K. share of the Commonwealth telephone cable.

The Company was formed in 1929 (as Imperial and International Communications, Ltd., the name being changed in 1934) to unify the oversea communications of the Empire, consequent upon the Imperial Wireless and Cable Conference of 1928. Cable and Wireless, Ltd., was acquired (under the Cable and Wireless Act, 1946) by the U.K. Government as from January 1, 1947, new directors being appointed.

Chairman, Sir John Macpherson, G.C.M.G.
£3,500 (and expenses up to £350)

CHURCH COMMISSIONERS

1 Millbank, Westminster, S.W.1

[Whitehall: 5444]

The Church Commissioners were established on April 1, 1948, by the amalgamation of Queen Anne's Bounty (established 1704) and the Ecclesiastical Commissioners (established 1836). The Commissioners have three main tasks:—

- (1) the management of their capital assets so that they may earn income;
- (2) the proper distribution of that income; and
- (3) the discharge of a large number of administrative duties conferred on them by Acts of Parliament and Measures of the Church Assembly.

In the financial year 1961/2 the Commissioners' income was:—

Stock Exchange Securities.	£8,993,275
Agricultural and Urban Estates.	4,576,161
Mortgages.	1,471,949
Miscellaneous.	1,346,429
	<hr/>
	£16,387,814

This income was spent as follows:—

Payment of clergy stipends and pensions.	£11,173,812
Provision of better houses for the clergy.	550,000
Provision of Church buildings in housing areas.	256,663
Additions to capital mainly to add to gifts by the laity.	291,842
Reserves, sinking funds, administration and other miscellaneous purposes.	4,115,497
	<hr/>
	£16,387,814

Constitution

The 2 Archbishops, the 41 diocesan Bishops, 5 deans, 10 other clerks and 10 laymen appointed by the Church Assembly; 4 laymen nominated by the Queen; 4 persons nominated by the Archbishop of Canterbury; The Lord Chancellor; The Lord President of the Council; the First Lord of the Treasury; The Chancellor of the Exchequer; The Secretary of State for the Home Dept.; The Speaker of the House of Commons; The Lord Chief Justice; The Master of the Rolls; The Attorney-General; The Solicitor-General; The Lord Mayor and two Aldermen of the City of London; The Lord Mayor of York and one representative from each of the Universities of Oxford and Cambridge.

Church Estates Commissioners and Joint Treasurers:—
First, Sir Malcolm Trustram Eve, Bt., G.B.E., M.C., T.D., O.C.
Second, J. S. W. Arbuthnot, M.B.E., T.D., M.P.
Third, Sir Hubert Ashton, K.B.E., M.C., M.P.
Secretary, Sir Mortimer Warren.

COLONIAL DEVELOPMENT CORPORATION

33 Hill Street, W.1
 [Mayfair: 8484]

Established by the *Overseas Resources Development Acts, 1948-59*, and charged with duties for securing development in dependent Commonwealth territories with a view to increasing their general productive capacity and trade.

The Corporation is authorized to borrow up to £160,000,000, and operates on commercial principles in close consultation with territorial Governments in order to ensure that its activities will be conducted in the best way to promote the welfare of Colonial peoples.

As a result of constitutional changes, the Corporation is increasingly operating in territories which are now independent. The Government announced in July 1962 that the Corporation would be renamed the Commonwealth Development Corporation.

Chairman (part-time), The Lord Howick of Glendale, G.C.M.G., K.C.V.O. £5,250
Deputy Chairman (part-time), J. F. Prideaux, O.B.E. £1,500
Members (part-time), A. P. H. Aitken; Sir John Elliot; A. Gaitskell, C.M.G.; The Lord Ogmone, P.C., T.D.; Sir Clem Pleass, K.C.M.G., K.C.V.O., K.B.E.; Sir Eric Tansley, C.M.G. each £1,000

COLONIAL OFFICE

The Church House, Great Smith Street, S.W.1
 [Abbey: 1266]

The business of the Colonies was, until 1801, included in the functions of the Home Secretary, to be transferred in that year to the newly-created "Secretary for War." In 1854 the outbreak of the Russian War led to the appointment of a Secretary of State for the Colonies (to relieve the War Secretary of Colonial business).

Secretary of State for the Colonies, THE RT. HON. DUNCAN SANDYS, M.P. £5,000
Principal Private Secretary, J. T. A. Howard-Drake.

Secretary-General, W. Stubbs, C.B.E., M.C.

CONSERVANCY BOARDS

THAMES CONSERVANCY

2-3 Norfolk Street, Strand, W.C.2

[Temple Bar: 4982]

The conservation of the River Thames was originally granted to twelve Conservators in 1857. In 1909 the Port of London Authority took over all rights, powers and duties of the Conservators in respect of the river below Teddington. The Conservators of the River Thames under the Thames Conservancy Acts, 1932 to 1959, now have jurisdiction over the River Thames from Cricklade in Wiltshire to a point about 265 yards below Teddington Lock; and under the Land Drainage Act, 1930, the Conservators are constituted the Drainage Board of the Thames Catchment Area. The principal duties of the Conservators as a Navigation Authority are the maintenance and improvement of the navigation, and the registration and regulation of craft; the Conservators also exercise jurisdiction for the prevention of pollution over the Thames Catchment Area, and over the fisheries in the River Thames from Cricklade to Teddington. Their income for these purposes is derived from various tolls, fees, rents, licences, payments from the Metropolitan Water Board and certain water undertakers, and contributions by the councils of various riparian counties and county boroughs in the Thames Valley; while the funds for carrying out the powers and duties of a Drainage Board are obtained by precept from the county councils and county borough councils as prescribed by the Land Drainage Act. The Board consists of 41 Conservators and their term of office is three years.

Chairman, Rt. Hon. Sir Richard Nugent, Bt., M.P.

Vice-Chairman, Col. F. A. Sudbury, O.B.E., E.R.D.
Secretary, Solicitor and Parliamentary Officer, G. E. Walker, O.B.E.

Chief Engineer, H. C. Bowen, O.B.E., T.D.
Treasurer and Accountant, E. A. James.

LEE CONSERVANCY CATCHMENT BOARD

Brettenham House, Lancaster Place,
 Strand, W.C.2

This Board was established by the *Land Drainage Act, 1930*, as the flood prevention authority for the Lec watershed, which covers an area of about 600 square miles. Since January 1, 1948, it has also been responsible for the prevention of pollution (by the exercise of powers under the *Lee Conservancy Acts, 1868-1938*, and the *Rivers (Prevention of Pollution) Acts, 1951 and 1961*) and for fisheries. The Board consists of 20 members, one of whom is appointed by the Minister of Agriculture, Fisheries and Food, the remainder being appointed or elected by local authorities in the Catchment Area.

Chairman, C. W. Wells.
Vice-Chairman, E. R. Spragg, O.B.E.
Clerk of the Board, J. L. Spiller, D.F.C.
Engineer, N. Medrington.
Treasurer, W. E. Adams.
Protection of Water Officer, R. G. Toms.

FORTH CONSERVANCY BOARD

Instituted by the Forth Conservancy Order Confirmation Act, 1921, for the preservation, maintenance and improvement of the River and Forth of Forth within the limits prescribed in the Order.

Chairman, The Earl of Mar and Kellie.
Clerk and Treasurer, M. D. Kennedy, w.s., Benview, Wellside Place, Falkirk.
Engineers, Messrs. Leslie & Reid, C.E., 53 Manor Place, Edinburgh.
Marine Superintendent, Lt.-Cdr. R. M. Roberts, D.S.C., R.N. (ret.).

COTTON BOARD

Royal Exchange 6th Floor, Manchester 2

Established under the Cotton Industry Development Council Order, 1948.

Chairman, The Viscount Rochdale, O.B.E., T.D.
Other Independent Members, F. Rostron, M.B.E.; J. C. Robinson.

Members representing the Employers, W. T. Winterbottom, C.B.E.; J. M. H. Grey; G. D. Hughes; R. T. Alcock.

Members representing Employees, Sir Alfred Roberts, C.B.E.; L. T. Wright; L. Sharp, M.B.E.; J. W. Whitworth.

Director-General, J. Broatch, C.B.E.

CROWN AGENTS FOR OVERSEA GOVERNMENTS AND ADMINISTRATIONS

4 Millbank, Westminster, S.W.1

[Abbey: 7730]

(*Stock Transfer Office*, Lloyd's Bank Buildings, Moorgate, E.C.2) [Central 8575]

(*Shipping Department (City Branch)*, 77 and 78 Gracechurch Street, E.C.3. [Mansion House 2016])

The Crown Agents are the officially appointed business and financial agents of a large number of Governments and public authorities. These include independent Governments such as Bahrain, Ceylon, Cyprus, Ghana, Jordan, Libya, the Federation of Malaya the Federal and Regional Governments of Nigeria, Sierra Leone, the Somali Republic and Tanganyika, as well as all the territories overseas under British administration or trusteeship. Other authorities for whom they act include the United Nations, municipalities, universities, and public utilities such as railway, electricity, broadcasting and water undertakings. The office is not a Department of the United Kingdom Government, and no vote for it comes before the United Kingdom Parliament. It is self-supporting, its funds being derived

from fees charged to principals from whom instructions are received direct.

The work of the Crown Agents' office includes the purchase, inspection, shipment and insurance of engineering plant and equipment and of stores of all kinds; the design of engineering structures; the issue and management of loans and the investment of funds; the payment of salaries to officers on leave; the engagement of staff for certain oversea Government appointments; the booking of passages for Government officers and their families; and many other functions.

Crown Agents, Sir Stephen Luke, K.C.M.G.; Sir Alfred Savage, K.C.M.G.
Secretary to the Crown Agents, W. G. Bawden, C.B.E.
Engineer in Chief, Sir James Farquharson, K.B.E.

CROWN ESTATE COMMISSIONERS

Whitehall, S.W.1

[Trafalgar: 2211]

THE CROWN ESTATE (formerly The Crown Lands).—The Land Revenues of the Crown in England and Wales have been collected on the public account since 1760, when George III. surrendered them and received a fixed annual payment or *Civil List*. At the time of the surrender the gross revenues amounted to about £89,000 and the net return to about £11,000.

In the year ended March 31, 1962, the total Receipts by the Commissioners were £3,756,653. The Expenditure (including property tax allowed) was £1,573,882. The sum of £2,190,000 was paid to the Exchequer in 1961-62 as *Surplus Revenue*, being a net sum from which no deductions have to be made for administration.

The Land Revenues in Ireland have been carried to the Consolidated Fund since 1820; from April 1, 1923, as regards Southern Ireland, they have been collected and administered by the Irish Free State (Republic of Ireland).

The Land Revenues in Scotland were transferred to the Commissioners in 1833.

First Commissioner and Chairman (part-time), The Earl of Perth, P.C.

Second Commissioner (and Secretary) J. A. Sutherland-Harris, C.B. £5,000

Commissioners (part-time), M. F. Berry; The Earl of Bradford, T.D.; D. H. Cameron of Lochiel, T.D.; W. C. Farnsworth, C.B.E.; Sir Edward Gillett;

The Lord Williams.

Deputy Commissioner, H. A. C. Gill

£2,650 to £3,350

Assistant Commissioner, P. S. Bolshaw

BOARD OF CUSTOMS AND EXCISE

King's Beam House, Mark Lane, E.C.3

[Mansion House: 1515]

Commissioners of Customs were first appointed in 1671 and housed by the King in London, the

present "Long Room" in the Custom House, Lower Thames Street, E.C.3, replacing that built by Charles II and rebuilt after destruction by fire in 1718 and 1874. The Excise Department was formerly under the Inland Revenue Department, and was amalgamated with the Customs Department on April 1, 1909.

The Board

Chairman, Sir James Crombie, K.C.B., K.B.E., C.M.G. £7,015

MINISTRY OF DEFENCE

Storey's Gate, S.W.1

[Whitehall: 7000]

The Ministry of Defence was formally constituted on January 1, 1947, under the *Ministry of Defence Act, 1946*. The Minister of Defence is responsible for the formulation and general application of a unified policy relating to the Armed Forces of the Crown as a whole and their requirements, as defined in White Papers under the heading *Central Organization for Defence* (Cmd. 6923/1946 and Cmd. 476/1958). He has authority to decide (subject to the responsibilities of the Cabinet and the Defence Committee), all major matters of defence policy affecting the size, shape, organization and disposition of the Armed Forces and their weapons and war-like equipment and supply (including defence research and development). He has further responsibilities arising from United Kingdom participation in international defence organizations.

The Minister of Defence is the Deputy Chairman of the Defence Committee of the Cabinet, of which the Prime Minister is Chairman.

Minister of Defence, The RT. HON (GEORGE EDWARD) PETER THORNECROFT, M.P. £5,000

DEVELOPMENT COMMISSION

3 Dean's Yard, Westminster, S.W.1

[Abbey: 1177]

The Development Commission was established and constituted under the *Development and Road Improvement Funds Act, 1909*, and the amending Act of 1910. The Act of 1909 as affected by the *Forestry Act, 1919*, the *Ministry of Transport Act, 1919* and the *Fisheries Act, 1955*, empowers the Treasury, on the recommendation of the Development Commission, to make advances by way of grant or loan to Government departments, public authorities, universities, colleges, schools, institutions, or associations not trading for profit. At the present time the Fund may be used to promote the economic advancement of the rural community through schemes designed to help and expand directly or indirectly agriculture and rural industries, and widen the opportunities of rural life; and secondly to promote the development and improvement of fisheries by a variety of means, including the promotion of research, both marine and freshwater. Chairman, The Countess of Albemarle, D.B.E. Other Commissioners, Lt.-Col. Hon. R. E. Beaumont, T.D.; C. I. C. Bosanquet; L. K. Elmhirst; J. L. Longland; W. Scholes; Prof. R. C. Tress; W. J. Wright, C.B.E.
 Secretary, F. S. O. Broughton . . . £2,715 to £3,415

NATIONAL DOCK LABOUR BOARD

22-26 Albert Embankment, S.E.1

The National Dock Labour Board administers the scheme for giving permanent employment to dock workers under the *Dock Workers (Regulation of Employment) Act, 1946*. Chairman, The Lord Crook. General Manager and Secretary, M. R. Haddock, O.B.E.

THE DUCHY OF CORNWALL

Buckingham Gate, S.W.1

[Victoria: 7345-8]

The Duchy of Cornwall was instituted by Edward III. In 1337 for the support of his eldest son, Edward, the Black Prince, and since that date the eldest son of the Sovereign has succeeded to the Dukedom by inheritance.

The Council

H.R.H. The Prince Philip, Duke of Edinburgh, K.G., K.T., G.M.B.E.; The Earl of Radnor, K.G., K.C.V.O. (*Lord Warden of the Stannaries*); The Lord Ashburton, K.C.V.O.  Sheriff (1962-63), Lt.-Col. W. G. Petherick.

THE DUCHY OF LANCASTER

Lancaster Place, Strand, W.C.1

[Temple Bar: 8277]

The estates and jurisdiction known as the Duchy and County Palatine of Lancaster have been attached to the Crown since 1399, when John of Gaunt's son came to the throne as Henry IV. As the Lancaster inheritance it goes back to 1295. Edward III. erected Lancashire into a County Palatine for his son John of Gaunt, Duke of Lancaster, in 1377.

Chancellor of the Duchy of Lancaster, The RIGHT HON. IAIN NORMAN MACLEOD, M.P. £5,000
 Private Secretary, P. L. Taylor.
 Parliamentary Private Secretaries, R. F. B. Bennett, V.R.D., M.P.; C. B. Longbottom, M.P.
 Vice-Chancellor, Sir Leonard Stone, O.B.E.

 Solicitor, K. R. E. Taylor, C.V.O.
 Chief Clerk, E. R. Wheeler, M.B.E.
 Registrar, Manchester District, R. A. Forrester.
 Do. Liverpool District, W. E. Helsby.
 Do. Preston District, W. E. Helsby.

COURT OF CHANCERY OF THE COUNTY PALATINE OF DURHAM

Registrar's Chambers, Durham and Sadberge, Old Elvet, Durham

It is uncertain when the existing "Palatine" privileges were first exercised, but these rights were recognized by Parliament in 1289 during the Episcopate of Bishop Bek and as having then existed "time out of mind" and long prior to the Norman Conquest. William I., in reorganizing his Kingdom, was so far as Durham was concerned, content to confirm the Laws of St. Cuthbert which previously Guthred, King of Northumbria and Alfred the Great appear in turn to have confirmed. Palatine Counties were formed for the protection and defence of the Border, in this case against the Scots, and the Lands of the See were far more extensive than the present County of Durham as is shown by the Jurisdiction of the present Palatine Court extending over Northam and Islandshire (roughly the northern quarter of Northumberland) and Bedlingtonshire. Palatinate rights were exercised by succeeding Prince Bishops till resumed by the Crown in 1836; but this Court of e-ordinate Jurisdiction with the Chancery Division of the High Court still exists and continues in large measure to exercise its ancient powers on behalf of the Crown.

Chancellor, H. E. Salt, Q.C.
 Attorney-General, G. S. Waller, O.B.E., Q.C.
 Solicitor-General, R. Lyons, Q.C.
 Registrar of Chancery Court, H. Curry, D.F.C.

MINISTRY OF EDUCATION

Curzon Street, W.1
 [Hyde Park: 7070]

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834. The Act of 1899 established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The Education Act of 1944 established the Ministry of Education. The cost of administration for the financial year 1962 was estimated at £3,592,000.

Chief Engineer, J. Henderson, C.B.E., M.C.

Secretary, A. A. Wallace.

EXCHEQUER AND AUDIT DEPARTMENT

Audit House, Victoria Embankment, E.C.4

[Fleet Street: 8901]

This is the Department of the Comptroller and Auditor General, an office created by the Act 23 & 30 Vict. c. 39 (1866) to replace, with extended powers, the separate offices of Comptroller General of the Receipt and Issue of the Exchequer and of the Commissioners for Auditing the Public Accounts. This officer is appointed by Letters Patent under the Great Seal, and is irremovable except upon an address from the two Houses of Parliament. In his capacity of Comptroller General of the Receipt and Issue of the Exchequer, he authorizes all issues from the Exchequer after satisfying himself that Parliament has given authority for them. He examines the Exchequer accounts and makes an annual report on them to Parliament. In his capacity of Auditor General of Public Accounts, he is charged with the duty of examining on behalf of the House of Commons the accounts of expenditure out of funds provided by Parliament, the accounts of the receipt of revenue, and generally all other public accounts, including the accounts of Government stores and of trading services conducted by Government Departments. The results of his examination of those accounts are reported to the House of Commons.

Comptroller and Auditor General, Sir Edmund

Compton, K.B.E., C.B. £7,000

The Export Guarantees Acts, 1949 to 1959,
 empower the Board of Trade to give guarantees to
 United Kingdom Exporters for the purpose of en-
 couraging export trade. This power is adminis-
 tered by the Export Credits Guarantee Depart-
 ment. Commercial guarantees, under Section 1
 of the 1949 Act, are given after consultation with
 an Advisory Council set up for the purpose.

Minister, The President of the Board of Trade.

FORESTRY COMMISSION

25 Saville Row, W.1

[Regent: 0221]

The Forestry Commission, a Body Corporate, is appointed under the *Forestry Acts, 1919 to 1951*. The Commissioners are charged with the general duty of promoting the interests of forestry, the development of afforestation, the production and supply of timber and the maintenance of reserves of growing trees in Great Britain. Including the former Crown Woods, transferred to it in 1924, the Commission has acquired about 2,546,000 acres of land (66 per cent. being plantable), of which 1,344,000 acres are under plantations. Under various grant schemes, financial assistance is given

to private owners and local authorities in respect of approved works of afforestation.

REGISTRY OF FRIENDLY SOCIETIES (CENTRAL OFFICE) AND OFFICE OF THE INDUSTRIAL ASSURANCE COMMISSIONER

17 North Audley Street, W 1
 [Mayfair: 7001]

A Barrister was appointed in 1828 to certify the Rules of Savings Banks, and in 1829 to certify those of Friendly Societies. In 1846 he was constituted Registrar of Friendly Societies. By the Friendly Societies Act, 1875, the Central Office of the Registry of Friendly Societies was created, consisting of the Chief Registrar and the Assistant Registrars for England. It exercises numerous and important functions under the Friendly Societies Acts, the Industrial and Provident Societies Acts, the Building Societies Acts, the Trade Union Acts, the Scientific Societies Act, the Trustee Saving Banks and Post Office Savings Bank Acts, the Loan Societies Act, the Shop Clubs Act, the Superannuation and other Trust Funds (Validation) Act and the Prevention of Fraud (Investments) Act. Under the Industrial Assurance Acts, the Chief Registrar is charged with various powers and duties in relation to Industrial Assurance Companies and Collecting Societies, and in that capacity is styled the Industrial Assurance Commissioner.

Secretary, Brigadier Sir Geoffrey Macnab, K.C.M.G., C.B. £3,300

MINISTRY OF HEALTH

Savile Row, W.1
 [Regent: 8411]

The Ministry of Health was established by the Ministry of Health Act, 1919, to exercise in

England and Wales functions with respect to health and local government which, in the main, were previously exercised by the Local Government Board and the National Health Insurance Commission. Responsibility for the National Health Insurance and the Widows', Orphans' and Old Age Contributory Pensions Schemes was transferred to the Ministry of National Insurance on April 1, 1945. The functions of the Ministry relating to local government, rating and valuation, public health, housing, rent control, burials and coast protection were transferred to the Ministry of Housing and Local Government on January 30, 1951. The responsibility for hospitals, limb-fitting, the supply of surgical appliances and certain treatment services formerly undertaken by the Ministry of Pensions was assumed on August 31, 1953. Since 1955 the Ministry has assumed responsibilities for food hygiene and welfare foods which were previously carried out by the Ministry of Food. On May 1, 1957, responsibility for certain aspects of the recruitment of nurses and midwives was transferred from the Ministry of Labour and National Service to the Ministry of Health. The main administrative divisions in the Ministry of Health deal with general practitioner services; nursing; general relations with various health professions; Local Authority health and welfare services; hospitals and specialist services; mental health services; nutrition, and international health. The Department is also responsible for the National Hospital Service Reserve and, in conjunction with the Home Office, for the Ambulance and First Aid Section of the Civil Defence Corps under the Civil Defence Act, 1948.

Minister, THE RT. HON. (JOHN) ENOCH POWELL, M.B.E., M.P. £5,000

 Senior Legal Assistants, J. Austin; N. G. Bird; K. A. T. Davey; J. B. Davidson; G. C. Davies; R. G. C. Davison; R. P. A. Douglas; Miss E. H. C. Forbes; G. E. Gammie; I. C. M. Hamilton; J. M. Keidan; F. D. Kennedy; W. H. I. Parish; Miss F. Potter, M.B.E.; A. K. Ross; G. D. Wheway... £2,103 to £2,715

NATIONAL HEALTH SERVICE

(For main article, see Index)

Regional Hospital Boards

England and Wales are divided into 15 hospital regions, each with its own Regional Hospital Board which administers the hospital and specialist services in the area. The Regional Hospital Boards do not, however, administer Teaching Hospitals, which have their own Boards of Governors.

The Chairmen and members of Regional Hospital Boards and Boards of Governors are appointed by the Minister of Health in accordance with the third schedule to the National Health Service Act, 1946.

Areas

Newcastle, Benfield Road, Newcastle upon Tyne
 6. Chairman, Sir Edward Collingwood, C.B.E.

ROYAL COMMISSION ON HISTORICAL MONUMENTS (ENGLAND)

Fielden House, Great College Street, S.W.1
[Abbey: 7041]

The Royal Commission on Historical Monuments (England) was appointed in 1908 to survey and publish in inventory form an account of every building, earthwork or stone construction up to the year 1714. The terminal date was extended after the late war to 1850. The Commission has published up to present date inventories covering seven counties, three cities and Roman York. It is a purely recording body and while the Commissioners may recommend that certain structures should be preserved, the have no power to implement their recommendations.

Chairman, The Marquess of Salisbury K.G., P.C.
Commissioners, Miss Rose Graham, C.B.E., D.Litt., F.S.A.; Sir Albert Richardson, K.C.V.O., R.A., Litt. D., F.S.A., F.R.I.B.A.; Professor I. A. Richmond, C.B.E., D.Litt., I.L.D., F.B.A., F.S.A.; Sir James Mann, K.C.V.O., F.B.A., F.S.A.; Professor V. H. Galbraith, D.Lit., Litt.D., F.B.A.; Professor S. Piggott, F.B.A., F.S.A.; Sir John Summerson, C.B.E., F.B.A., F.S.A., A.R.I.B.A.; Professor H. C. Darby, O.B.E., Ph.D.; Christopher Hussey, C.B.E., F.S.A.; C. A. Ralegh Radford, F.B.A., F.S.A.; Prof. J. D. E. Clark, Ph.D., F.B.A., F.S.A. Prof. F. Wormald, Litt.D., F.B.A., F.S.A.; R. H. Parker, C.B.E., M.C.; and the Lords, Lieutenant of the counties at the time of survey.
Secretary, A. R. Duffy. £2,815

HOME OFFICE

Whitehall, S.W.1
[Whitehall: 8100]

The Home Office deals with such internal affairs of England and Wales as are not assigned to other Departments. The Home Secretary is the channel of communication between Her Majesty the Queen and Her subjects, and between the U.K. Govern-

ment and the Government of Northern Ireland, the Channel Islands and the Isle of Man. The chief matters with which the Home Office is concerned are—The maintenance of law and order; the efficiency of the police service; the treatment of offenders, including juvenile offenders; the efficiency of the Probation Service; the organization of Magistrates' Courts; legislation on criminal justice; the supervision of the Fire Service; the preparations for Civil Defence Services; the care of children by local authorities and voluntary societies; the regulation of the employment of children and young persons; the control and naturalization of aliens; the law relating to parliamentary and local government elections. In addition, many miscellaneous subjects are dealt with, including explosives, dangerous drugs, poisons, intoxicating liquor and State Management Districts (England and Wales), shops, public safety, entertainments, bye-laws on good rule and government and other subjects, cremations and burials, betting and gambling; addresses and petitions to the Queen, ceremonies and formal business connected with honours.

HORSERACE TOTALISATOR BOARD

163 Euston Road, N.W.1
 [Euston: 5871]

Established by the Betting Levy Act, 1961, as successor in title to the Racecourse Betting Control Board established by the Racecourse Betting Act, 1928.
 Its function is to operate totalisators on approved horse racecourses in Great Britain, and thus to provide moneys for the improvement of breeds of horses, the sport of horse racing and the advancement and encouragement of veterinary science and education, by means of an annual levy paid to the Horserace Betting Levy Board established under the same Act in 1961.

Members

Apptd. by the Home Secretary: Sir Alexander Sim (Chairman); Sir Dingwall Bateson, C.B.E., M.C.; The Lord Derwent; Col. G. E. C. Wigg, M.P. Secretary, Captain E. T. Graham, R.N. (ret.).

MINISTRY OF HOUSING AND LOCAL GOVERNMENT

Whitehall, S.W.1
 [Whitehall: 4300]

The Ministry of Housing and Local Government was set up in 1951 under the title of Ministry of Local Government and Planning and took over the housing and local government functions of the Ministry of Health and the functions of the Ministry of Town and Country Planning. It is responsible for the administration of Government housing policy, housing standards and the general supervision of local authority housing programmes; the administration of the planning acts concerning the use and development of land in England and Wales; and it is the department principally concerned in the supervision of the work of local authorities.

CENTRAL OFFICE OF INFORMATION

Hercules Road, Westminster Bridge Road, S.E.1
[Waterloo: 2345]

The Central Office of Information is a common service department which produces information and publicity material, and supplies publicity services, required by all other Government departments. In the United Kingdom it conducts Government display press and poster advertising (except for the National Savings Committee), produces and distributes booklets, leaflets, films, television material, exhibitions, photographs and other visual material; carries out social surveys, and distributes departmental press notices. For the overseas departments it supplies British Information posts overseas with press, radio and television material, booklets, magazines, reference services, films, exhibitions, photographs, display and reading room material; manages schemes for promoting the overseas sale of British books, periodicals and newspapers; arranges tours in the United Kingdom for official visitors from overseas; and provides exhibition stands at trade fairs (for the Board of Trade). Administratively, the Central Office of Information is responsible to Treasury ministers, while the ministers whose departments it serves are responsible for the policy expressed in its work.

BOARD OF INLAND REVENUE

Somerset House, W.C.2
[Temple Bar: 2407]

The Board of Inland Revenue was constituted under the Inland Revenue Board Act, 1849, by the consolidation of the Board of Excise and the Board of Stamps and Taxes. In 1909 the administration of excise duties was transferred to the Board of Customs. The Board of Inland Revenue is responsible for the management and collection of income tax, surtax, profits tax, estate duty, stamp duties and other direct taxes, and also for the valuation of freehold and leasehold property for Inland Revenue taxation, for certain purposes on behalf of other Government Departments and public authorities and, in England and Wales, for local authority rating. Since April 1, 1960, the Board has also been responsible for the management and collection of tithe redemption annuities. Salaries and expenses of the Board for 1962/63 were estimated at £59,298,000.

The Board

Chairman, Sir Alexander Johnston, G.C.B. K.B.E.,
£7,015
Private Secretary, J. M. Crawley.

 Secretary, J. P. Keane.

MINISTRY OF LABOUR

8 St. James's Square, S.W.1.

[Whitehall:6200]

The Ministry of Labour was set up in 1916 to take over certain duties of the Board of Trade, including the administration throughout Great Britain of employment exchanges established under the *Labour Exchanges Act, 1909*. The first 62 had opened on February 1, 1910, and there are now over 1,000 local offices. The Ministry provides a free service for employers seeking labour and for workers who are unemployed or wish to change their jobs. The arrangements cover all categories of labour, including men and women with technical and scientific qualifications, professional and executive workers, those released from H. M. Forces, discharged prisoners and foreign workers. The exchanges also act as agencies for other Government Departments in such matters as the payment of unemployment benefit and the issue of passports.

Through its 17 Industrial Rehabilitation Units the Ministry helps disabled and handicapped men and women to regain working fitness, and in 13 Government Training Centres provides courses to help individuals in need of training or re-training. It is also responsible for the central, and some local, administration of the Youth Employment Service; the promotion of safety, health and welfare amongst workpeople in factories and certain other premises; the enforcement of statutory minimum wages, holidays and hours of work laid down by Wages Councils; and the collection and publication of statistics about manpower, wages, hours of work, and the Index of retail prices.

The Department, through its advisory and conciliation services, assists in the prevention or settlement of industrial disputes, and its activities overseas include the maintenance of labour attachés in certain foreign countries and liaison with the International Labour Organisation.

Minister of Labour, THE RT. HON. JOHN HUGH HARE, O.B.E., M.P. £5,000

Principal Private Secretary, K. H. Cicous.

Deputy Umpire, S. J. W. Price..... fees
Secretary, W. H. James..... £1,595 to £2,006

H.M. LAND REGISTRY
 Lincoln's Inn Fields, W.C.2
 [Holborn: 3488]

H.M. Land Registry was established in pursuance of a recommendation of a Royal Commission by the Land Registry Act 1862. The aim of the Act was to render dealings with land more simple and economical by establishing a State register of landowners who voluntarily submitted the titles to their land for examination and approval by the Registrar on behalf of the State. The Registry was reformed by the Land Transfer Act, 1875, which, while making many changes in the system, continued its voluntary basis. In 1897 the Land Transfer Act introduced the principle of compulsory registration, and four Orders in Council under that Act between 1898 and 1902 made the system compulsory on sale in the administrative county of London. By further Orders registration was made compulsory on sale in 1925 in Eastbourne; in 1928 in Hastings, in 1936 in the administrative county of Middlesex, in 1938 in the County Borough of Croydon, in 1952 in the administrative County of Surrey, in 1954 in the City of Oxford, in 1956 in the County Borough of Oldham, in 1957 in the Medway area of Kent and in the County Borough of Leicester, in 1958 in eastern areas of Kent and the City of Canterbury, in 1961 in the remainder of Kent, and the Cities of Manchester and Salford, and in 1962 in the County Boroughs of Blackburn, Huddersfield and Reading. The Land Registration Act, 1925, consolidated the previous Acts, and made such changes in the system as the experience of a generation had shown to be necessary. The keynote of the system is that the machinery for the purchase and sale of land is assimilated to that for stocks and shares. Absolute titles granted by the Land Registry are guaranteed by the State. Simple forms, analogous to those used on transfers of stocks and shares, are provided. The cost of buying, selling or mortgaging registered land is much less than the cost in the case of unregistered land. It is open to any County Council or Council of a County Borough to apply to the Privy Council for an order making registration of title compulsory in its area. The Land Registry is administered under the Lord Chancellor by the Chief Land Registrar, who also controls the Land Charges Department under the Land Charges Act, 1925, and the Argicultural Credits Act, 1928 (Sec. 9).

Registration of Title

Chief Land Registrar, Sir George Curtis, C.B. £4,700
Senior Registrar, T. B. F. Ruoff, C.B.E.... £3,850
Registrars, E. D. Wetton, C.B.E.; W. E. B. Pryer;
 T. I. Casswell; D. Johnston; R. S. Hood;

S. L. Whiteley; C. C. Scarth; C. N. T. Waterer; S. Jacey; C. W. K. Donaldson £2,750 to £3,350
Asst. Registrars, G. E. O. Nutt; D. P. Chivers;
 A. G. W. James; Miss M. M. F. G. Walker;
 A. O. Viney; U. Davidson; C. W. Furneaux;
 R. B. Roper; P. Kendall; N. U. A. Hogg;
 W. D. Hosking; Miss J. E. Bagshaw; R. E. Shorrocks; A. D. Dewar; A. P. Roberts; Miss M. Gray; G. A. Weddell; J. S. R. Bevington; Miss C. M. Bannister £2,038 to £2,650
Organization Officer, A. J. Jenkins £2,392 to £2,650
Chief Executive Officers, P. Gittings; H. R. Goose; E. W. Hannam £2,055 to £2,380
Senior Executive Officers, C. D. Garrett; R. T. Adams; K. C. Walpole; J. L. Memory; B. J. Moulden; F. E. J. Allen; P. J. Dix; J. C. Eames, M.B.E.; K. E. Aris; V. P. Sterlini; G. H. Fisher; R. Palmer; G. H. Scuffell; A. G. Caudle; A. W. Pardey; J. R. Boulter; W. Gledhill; R. G. W. Brazier; G. A. Whyman; E. F. A. Jones; W. H. Norris; H. Walter; J. H. Sex; R. C. Martin; A. L. Moore; A. J. Sexton; H. G. D. Wright; J. Q. Pembroke; T. A. Davies; C. T. Vince; L. J. Cutler; R. J. Moss; E. D. B. Head £1,568 to £1,947
Chief Superintendent (Plans Branch), C. J. Sweeney, M.B.E. £2,392 to £2,650

Parliamentary Private Secretary, J. M. Coulson, M.P.

Legal Secretary, G. E. Dudman £2,500 to £3,000
Asst. Legal Sec., H. J. Davies . . . £2,720 to £2,400

LIBRARIES

BRITISH MUSEUM

See under MUSEUMS

NATIONAL LIBRARY OF SCOTLAND

George IV Bridge, Edinburgh 1

[Caledonian: 4104]

Open free. Reading Room, weekdays, 9.30 a.m. to 8.30 p.m. (During July, August and September closes at 5 p.m. on Mondays, Tuesdays and Fridays); Saturdays, 9.30 to 1. Map Room, weekdays, 9.30 a.m. to 5 p.m.; Saturdays, 9.30 to

1. Exhibition, weekdays, 9.30 a.m. to 5 p.m.; Saturdays, 9.30 to 1; Sundays, 2 to 5. During Edinburgh International Festival open till 8.30 p.m. on weekdays.

The Library, which had been founded as the Advocates' Library in 1682, became the National Library of Scotland by Act of Parliament in 1925. It continues to share the rights conferred by successive Copyright Acts since 1709. Its collections of printed books and MSS., augmented by purchase and gift, are very large and it has an unrivalled Scottish collection. The present building was opened by H.M. the Queen in 1956.

The Reading Room is for reference and research which cannot conveniently be pursued elsewhere. Admission is by ticket issued to an approved applicant.

Chairman of the Trustees, The Earl of Crawford and Balcarres, K.T., G.B.E.

Librarian of the National Library, William Beattie, LL.D. £3,350

Secretary of the Library, J. R. Seaton.

Keeper of Printed Books, D. M. Lloyd £2,283 to £2,650

Keeper of Manuscripts, William Park £2,233 to £2,650

THE NATIONAL LIBRARY OF WALES

LLYFCELL GENEDLAETHOL CYMRU

Aberystwyth

Readers' room open on weekdays, 9.30 a.m. to 6 p.m. (Saturdays, 5 p.m.); closed on Sundays. Admission by Reader's Ticket.

Founded by Royal Charter, 1907, and maintained by annual grant from the Treasury. One of the six libraries entitled to certain privileges under Copyright Act. Contains nearly 2,000,000 printed books, 30,000 manuscripts, 3,500,000 deeds and documents, and numerous maps, prints and drawings. Specializes in manuscripts and books relating to Wales and the Celtic peoples. Repository for pre-1858 Welsh probate records. Approved by the Master of the Rolls as a repository for manorial records and title documents, and by the Lord Chancellor for certain legal records. Bureau of the Regional Libraries Scheme for Wales and Monmouthshire.

Librarian, E. D. Jones.

Deputy Librarian, G. Tibbott.

NATIONAL CENTRAL LIBRARY

Malet Place, W.C.1

[Euston: 6262]

Incorporated by Royal Charter and maintained by annual grants from the Treasury, Municipal and County Authorities, University and special libraries, adult education bodies, and public Trusts.

The Library is the national centre for the loan of books (other than fiction and students' text-books) and periodicals to readers in all parts of the British Isles, through their public, university, or other library; and also to and from foreign libraries through their national centres. It is able to draw on over 21,000,000 books in nearly all the principal British libraries. Other work undertaken by the Library includes loans to organized classes of adult students; and the recording of duplicates and discarded books and periodicals and their distribution to appropriate libraries at home and abroad; also the establishment of a catalogue of Russian books and periodicals in British libraries. The Library's own stock for loan comprises about 235,000 volumes.

Applications to borrow books must be made through the reader's library and not directly to the National Central Library.

Librarian and Secretary to the Trustees, S. P. L. Filon.
Deputy Librarian, I. P. Gibb.

SCOTTISH CENTRAL LIBRARY

Lawnmarket, Edinburgh, 1

Carries out in Scotland functions similar to those of the National Central Library, i.e. acts as a clearing-house for inter-library lending, and maintains a Union Catalogue and other records of books held by Scottish libraries. Its own stock of 35,000 books is freely available to all. Applications to borrow books must be made through the reader's library.

Librarian and Secretary to the Trustees, M. C. Pottinger, D.S.C.

Deputy Librarian, Miss E. M. Swinton.

Under-Secretaries, M. I. Michaels, C.B. (Atomic Energy Division); R. N. Quirk, C.B. (General Science Division).....£3,800
 Assistant Secretaries, G. I. Crawford; J. F. Hsieh, O.B.E.; D. I. B. Jones; J. G. Liverman; R. A. Thompson.....£2,350 to £2,950

 £2,500

Secretary, Office of the Minister for Science, F. F. Turnbull, C.B., C.B.E.

LORD PRIVY SEAL

(see Foreign Office)

MEDICAL RESEARCH COUNCIL

20 Park Crescent, W.1

[Museum: 5422]

The Council, formerly the Medical Research Committee established in 1913 under the National Health Insurance Act, was incorporated under its present title by Royal Charter on April 1, 1920. It is now under the administrative direction of a Committee of the Privy Council, consisting of the Minister for Science, the Secretaries of State for Scotland, for Commonwealth Relations, for the Colonies, and for Home Affairs, the Minister of Health and the Minister of Labour; the Secretary of the Medical Research Council is *ex officio* Secretary to this Committee.

The Council applies moneys voted by Parliament or received from private sources for the furtherance of medical research. Its reports, published by H.M. Stationery Office, are obtainable through any bookseller.

Members, The Lord Shawcross, P.C., Q.C. (Chairman); Sir Edward Collingwood, C.B.E., SC.D. (Treasurer); Prof. T. Crawford, M.D.; Prof. A. L. Hodgkin, F.R.S.; Sir Hugh Linstead, C.B.E., M.P.; Prof. W. M. Millar, M.D.; Prof. M. L. Rosenheim, C.B.E., M.D.; Prof. Wilson Smith, M.D., F.R.S.; Prof. G. M. Bull, M.D.; Prof. A. Neuberger, Ph.D., M.D., F.R.S.; Prof. M. M. Swann, Ph.D., P.R.S.

Secretary, Sir Harold Himsworth, K.C.B., M.D., F.R.S.

Deputy Secretary, C. Y. Carstairs, C.M.G.

Principal Medical Officers, F. J. C. Herrald; B. S. Lush, M.D.

Principal Administrative Officer, J. G. Duncan.

Senior Medical Officers, Mrs. J. M. Faulkner (Information); R. C. Norton.

Assistant Secretaries, J. D. Whittaker, M.B.E.; C. A. Kirkman.

Medical Officers, E. M. B. Clements; Mrs. M. Gorrill; P. J. Chapman; H. W. Bunje, M.D.; M. P. W. Godfrey; H. P. Ruffell Smith, A.F.C.

Administrative Officers, D. J. Cawthron; J. C. R. Hudson; R. F. Smart.

Consultant Adviser to the Secretary, Sir Charles Harington, K.B.E., SC.D., F.R.S.

National Institute for Medical Research

Mill Hill, N.W.7

[Mill Hill: 3666]

Director, P. B. Medawar, C.B.E., D.Sc., F.R.S.

Research Units
